How to Use This Manual

This manual explains how to use AGRINUXES from the first sign-up to the last report. It covers every kind of account, every menu and tab, every form, and the template system in detail. It was written from the platform itself as it stood in October 2026. Where something is not finished, only works on one device, or shows sample data, the manual says so plainly.

You do not have to read it from front to back. Pick your starting point below.

Where to start

If you are…	Read these parts
A **farmer or cooperative**	Part 1 (account and set-up), then Part 2 (templates), Part 3 (production), Part 4 (business), Part 5 (management and tools)
An **agro-dealer**, **AgriSupply** provider or **AgriFood** seller	Part 1, Part 6 (workspace basics, invoices, revenue), Part 7 (your tabs)
An **agro processor**	Part 1, Part 6 (workspace basics), Part 7 (processing, sourcing and traceability)
A **vet**, **equipment-hire**, **transport** or **AgriServices** business	Part 1, Part 6
An **individual buyer**	Part 1, Part 8 (chapter on individual accounts)
An **extension officer or supervisor**	Part 1, Part 8 (chapter on extension officers)
Government staff	Part 1, Part 8 (chapter on government accounts)
A **programme partner** (NGO, donor, programme manager, M&E officer)	Part 1, Part 8 (chapter on programme partners)
The **owner or administrator** of a company	Part 1, especially Team and Permissions, Data-sharing consent and Backup and Restore
Mainly interested in **templates**	Part 2, then Appendices A to D

How the manual is organised

Part	What it covers
Part 1	Getting started: account types, registering, signing in, the set-up wizard, finding your way around, settings, team and permissions, data sharing, backup, and where your data is kept
Part 2	Templates, record fields and care guides: choosing, using, customising and saving templates; the daily log; the care plan; spreadsheet import
Part 3	Running production: cycles, stages, events, outputs and closing a cycle
Part 4	Running the farm business: dashboard, processing, inventory, sales, trade and export, finance, credit profile and reports
Part 5	Farm management, intelligence and devices: animal health, staff, procurement, crop rotation, AI pages, device pages and the marketplaces seen from a farm
Part 6	Vendor workspaces: the parts every vendor shares, then vets, equipment hire, transport and AgriServices
Part 7	Vendor workspaces: agro-dealers, AgriSupply, AgriFood sellers and processors
Part 8	Buyers, government, extension officers and programme partners
Appendices	A: template catalogue. B: daily record fields. C: cycle types. D: starter care guides. E: roles and permissions. F: current limits and preview features. G: glossary. H: troubleshooting and questions. I: first-week checklists

How to read the pages

- Names of buttons, tabs, menu items and fields are written in **bold**, exactly as they appear on screen.
- Instructions you follow are numbered steps. Do them in order.
- Boxes call attention to something:

> **Tip:** A shortcut or good habit that saves time.

> **Watch out:** Something that can cause a mistake, lost work or a wrong figure.

> **Note:** Extra information worth knowing.

> **Example:** A worked example with realistic numbers.

- Amounts are shown in **ZMW** (Zambian kwacha) where the platform shows ZMW. Your company's currency is chosen when you set up.

Three things to know before you begin

1. **Some information is shared by your whole company and some is not.** Your farm workspace (business profile, enterprises, cycles, daily records, events, saved templates), Finance, Sales and Inventory are kept in your company account, so everyone in the company sees the same thing on any device. Several other pages are kept only in the browser on the device you used. Part 1 has a full table, and every page in Parts 4 and 5 says which kind it is.
2. **What you see depends on your role.** The owner can do everything. Other team members see only the menu items their role allows (Appendix E lists every role).
3. **Starter care guides are a starting point, not medical or agronomic advice.** Always confirm vaccines, medicines, doses and sprays with a vet, an agronomist or an extension officer, and read the product label, before you rely on them (Part 2).

Part 1 — Getting Started and Your Account

What AGRINUXES is and who it is for

AGRINUXES is an online platform for agriculture in Zambia and the region. It does two jobs at once. First, it is a **marketplace**: a place where farmers, buyers, vets, equipment owners, input shops and transporters find each other. Second, it is a **business workspace**: a set of tools that a farm or an agribusiness uses every day to record production, stock, sales and money, and to manage staff.

You may see the name written as **AgroNexus** on some screens (the sign-in box, the top of the sidebar, the individual-customer page) and as **AGRINUXES** on others (the set-up wizard and the vendor sidebar). It is the same product.

Everything in this manual is read from how the platform actually behaves today. Where a feature is not yet finished, or is kept only in your browser, the manual says so plainly.

The account types

When you register you choose one of three routes: **Individual**, **Business** (which includes farms), or **Gov / Partner**. Behind those three routes there are several kinds of account. The table shows what each one is for and what you get.

Account type	Who it is for	What you get
Individual (customer)	Buyers and anyone who only wants to browse and contact providers	A simple customer page: Home, Marketplace, Saved, Profile. No business workspace.
Farmer / Farm	A farm of any size: crops, poultry, livestock, fish, mixed	The full **farm workspace**: production, inventory, sales, finance, reports, AI tools, devices, team
Cooperative	A smallholder group running shared crops, livestock and marketing	The same full farm workspace as a farm
Agro Dealer	Input shops: seeds, fertiliser, chemicals, feed	A **vendor workspace** with catalogue, orders, stock, clients, invoices
Vet / Animal Health	Veterinary practices	Vendor workspace with appointments, patient records, prescriptions
Equipment Hire	Owners of tractors, implements, drones, irrigation kits	Vendor workspace with fleet, bookings, maintenance
AgriFood Seller	Sellers of fresh produce and food products	Vendor workspace with produce listings, buyer orders, pricing and stock
AgriSupply Provider	Suppliers of packaging, materials, chemicals, storage	Vendor workspace with supply catalogue, purchase orders, deliveries
AgriServices Provider	Irrigation, fencing, soil testing, consulting, land preparation	Vendor workspace with services catalogue and job schedule
Agro Processor	Millers, oil pressers, dairy and meat processors	Vendor workspace with farm sourcing, processing logs, traceability
Transport / Haulage	Hauliers moving produce and inputs	Vendor workspace with transport jobs, vehicles, maintenance
Government	Ministry and district-office staff	A read-only dashboard of de-identified figures from farms that opted in, plus advisories and programmes
Extension officer / supervisor	Government field officers	A caseload of farms in your camp or district, visits and follow-ups

Account type	Who it is for	What you get
Partner	NGO, donor and development-programme staff	Programme tools (enrolment, support, results) and the same district data

Farmers and cooperatives get the **farm workspace**. Every other business type gets a **vendor workspace** with its own tabs. Parts 2 to 5 explain the farm workspace. Parts 6 and 7 explain the vendor workspaces. Part 8 explains buyers, government, extension officers and partners.

> **Note:** The label you pick at registration is not always the type you end up with. For example, "Crop Farm" and "Poultry Farm" both become a plain **Farm**. The full list is in the chapter "Registering for an account".

Visiting without an account

You do not need an account to look around. When you open AGRINUXES and are not signed in, you land on the public **marketplace page**.

What a visitor can do

Before you start: nothing. Just open the site.

What you will see

- A top bar with the AGRINUXES name and a **Marketplace** badge, plus **Sign in** and **Register free** buttons. On a phone the two buttons sit behind a menu icon at the top right.
- A large banner that says **Browse free — no account needed**, with two buttons: **Register as Individual** and **Register Farm / Business**. Both open the same sign-in and registration window.
- Four small boxes that summarise the offer: the number of listings, "Verified sellers", "AI farm tools" (for business accounts) and "Instant booking" (once registered).
- A **search box** ("Search providers, products, categories…") and a row of category buttons.
- A grid of cards.

The categories

Category	What is listed
Vet Services	Mobile vets, clinics, aquaculture vets, remote vet consultations, para-vets
Equipment Hire	Tractors, irrigation kits, drone spraying, refrigerated trucks
Agro Dealers	Input suppliers, feed mills, solar pumps, chemical distributors
AgriFood	Broilers, tilapia, tomatoes, maize, milk, honey
AgriSupply	Seed, fertiliser, feed, sprayers
AgriServices	Crop advisory, soil and water labs, farmer training, farm finance and insurance

Each category button shows how many listings it holds. **All** shows everything.

What a card shows: a photo, the category, a **Verified** badge when the seller is marked verified, the name, a one-line description, the price (for products, in ZMW per unit), the town, the star rating and number of ratings (for providers), how many units are available and who sells them, and a "From ZMW …" price for services.

Opening a card: click it. A window shows the full description, the tags (such as "VBZ Registered" or "24/7"), the location and the price. It has these buttons:

- **Call directly** — starts a phone call to the provider. This is free and needs no account.
- **Video call** — appears only on listings tagged for video or teleconsultation. It asks you to sign in.
- **Order** (for products) or **Book / Enquire** (for providers) — asks you to sign in.

A yellow note at the bottom reminds you: sign in or register free to book, order and start video calls.

What needs an account

Booking, ordering and video calls. A visitor can browse, search, filter and phone any provider, but nothing else.

> **Note:** The cards on this public page are sample listings that are built into the page. They show you how the marketplace looks and what a listing contains. They are not a live list of real sellers. The live marketplace for your own business is reached after you register (see Parts 6 and 7).

Good to know

- Search looks at the name, the one-line description, the category and the tags. If nothing matches you see **No results for "…"** and a **Clear filters** link.
- The number of listings under the search box updates as you filter. The note "phone calls always free" is shown next to it.
- A footer link, **Sign in / Register**, opens the same window.
- If you are already signed in and somehow land on this page, it shows "Signed in as …" and a **Go to dashboard** button.

Registering for an account

All registration happens in one window that opens when you press **Sign in**, **Register free**, **Register as Individual** or **Register Farm / Business**. The window has four tabs along the top: **Sign In**, **Individual**, **Business** and **Gov / Partner**. Press the tab for the route you want. Switching tabs clears what you typed.

Things that are the same on every route:

- **Phone number is always required.** The registration will not go through without it.
- **Password rules:** at least 6 characters, and you must type it twice. The small eye icon in the box shows or hides what you typed.
- **Terms:** you must tick **I agree to the Terms of Service and Privacy Policy**. The create button stays grey until you tick it (on the Gov / Partner tab you get a message instead).
- **Email** must be a real email-shaped address (it must contain an @). Each email can be used for one account only. Each phone number can also be used for one account only.
- Pressing the grey **X** at the top right, or clicking outside the window, closes it.

Route 1: Individual

What it is for: buyers, farmers and customers who want to browse and contact providers without running a farm system. You can upgrade later by registering a separate Business account (use a different email and phone number).

Step by step

1. On the landing page press **Register free** (or **Register as Individual**).
2. Press the **Individual** tab if it is not already open.
3. Type your **Full name**.
4. Type your **Email address**.
5. Type your **Phone number** (the example shown is +260 977 000 111).
6. Optionally pick a **Country** (Zambia, Zimbabwe, Malawi, Tanzania, Mozambique, Botswana, Kenya, Uganda or Other).
7. Type a **Password** (min 6 characters) and type it again under **Confirm password**.
8. Tick the Terms box.
9. Press **Create Account**.

What you will see: you go straight to your customer page (see "The individual customer page" later in this part).

Field	Required?	Notes
Full name	Yes	
Email address	Yes	Must be unused
Phone number	Yes	Must be unused
Country	No	Shown as "Country (optional)". It is not stored with the account.
Password	Yes	At least 6 characters
Confirm password	Yes	Must match
Terms tick-box	Yes	Button stays disabled until ticked

At the bottom there are shortcuts: **Register a farm or business instead** and **Sign in**.

Route 2: Business (farms and every vendor type)

Business registration has **two steps**. A bar at the top of the window shows "Step 1 of 2" and "Step 2 of 2".

Step 1 — your account details

1. Press the **Business** tab. A green note explains that a Business / Farm account gives you full farm management (production cycles, staff, payroll, inventory, AI analytics, IoT and the complete marketplace).
2. Type **Your full name (director / owner)**.
3. Type your **Email address**.
4. Type your **Phone number**.
5. Type and confirm your **Password** (min 6 characters).
6. Tick the Terms box.
7. Press **Continue to farm details**.

Step 2 — your farm or business

1. Type the **Farm / business name**.
2. Open **Type of farm / business** and pick one (full list below).
3. Pick your **Country** from the list (it starts on Zambia; the list is Zambia, Zimbabwe, Malawi, Tanzania, Mozambique, Botswana, Namibia, Angola, Congo DRC, Kenya, Uganda, Other).

4. Optionally fill **Farm size (ha)** and **Staff / users**.
5. Press **Create Farm Account**. Press **Back** if you want to change step 1.

What happens next: the account is created, you are signed in, and you are taken to the **set-up wizard** (see "The set-up wizard").

You become the **director** of the new company and its administrator. The director has full access to everything and manages the team.

Field	Step	Required?	Notes
Your full name	1	Yes	
Email address	1	Yes	
Phone number	1	Yes	
Password / Confirm	1	Yes	Min 6 characters
Terms	1	Yes	
Farm / business name	2	Yes	Becomes the company name
Type of farm / business	2	Yes	Decides your workspace
Country	2	Defaults to Zambia	Not stored at this point; you choose again in the wizard
Farm size (ha)	2	No	Not stored
Staff / users	2	No	Not stored

> **Watch out:** **Farm size**, **Staff / users** and **Country** in step 2 are not saved with your account. You will be asked for your country and currency again in the set-up wizard, and your farm size can be entered later where the farm needs it.

Every business type: the form label and what you get

Label in the registration form	You become	Workspace you get
Crop Farm	Farm	Farm workspace
Poultry Farm	Farm	Farm workspace
Livestock / Cattle Farm	Farm	Farm workspace
Aquaculture / Fish Farm	Farm	Farm workspace
Mixed Farm	Farm	Farm workspace
Other	Farm	Farm workspace
Cooperative / Smallholder Group	Cooperative	Farm workspace
Agro Dealer / Input Shop	Agro Dealer	Vendor workspace: Product Catalog, Orders, Stock Management
Veterinary / Animal Health	Veterinary Services	Vendor workspace: Appointments, Patient Records, Prescriptions
Equipment Hire	Equipment Hire	Vendor workspace: Fleet Management, Bookings, Maintenance
AgriFood Seller / Trader	AgriFood Seller	Vendor workspace: Produce Listings, Buyer Orders, Pricing & Stock
AgriSupply Provider	AgriSupply Provider	Vendor workspace: Supply Catalog, Purchase Orders, Deliveries
AgriServices Provider	AgriServices Provider	Vendor workspace: Services Catalog, Job Schedule

Label in the registration form	You become	Workspace you get
Agribusiness / Processing	Agro Processor	Vendor workspace: Farm Sourcing, Processing Logs, Traceability
Transport / Haulage	Transport & Logistics	Vendor workspace: Transport Jobs, Vehicles, Maintenance

> **Tip:** The registration form describes the *kind of farm* (crop, poultry, fish). What you actually produce is chosen later in the wizard, as "enterprises", so the six farm labels all lead to the same place.

Route 3: Gov / Partner

What it is for: ministry and district staff, extension officers, and NGO, donor and development-partner staff. This route gives **read-only, de-identified** dashboards (production, prices, disease hotspots and sustainability figures added up across farms that have opted in) and lets you send advisories by district.

Step by step

1. Press the **Gov / Partner** tab. An amber note explains what these accounts see.
2. Type your **Your full name**.
3. Type your **Official email address**.
4. Type your **Phone number**.
5. Type your **Organisation** (for example "Ministry of Agriculture — Chongwe DACO").
6. Pick the **organisation type**: **Government ministry / district office**, **NGO / development partner**, or **Donor programme**.
7. Choose what you will do, by pressing one of three boxes:

    - **Dashboard viewer** — aggregated district and national data
    - **Extension officer** — caseload of farms in your camp or district
    - **Supporting partner (FAO, donor, NGO)** — run programmes: enrol farms, deliver inputs and training, track results. Choosing this box also switches the organisation type from Government to Donor programme if it was on Government.

1. Fill **Province** and **District**. They are optional for viewers and partners, and **required for an extension officer** (the boxes then read "Province" and "District" without "(optional)").
2. Type and confirm your **Password** (min 6 characters).
3. Tick the Terms box.
4. Press **Create partner account**.

What you will see: you are signed in and taken to the matching dashboard: the government dashboard (viewer), the extension workspace (officer) or the partner workspace (supporting partner). Those are explained in Part 8.

Field	Required?	Notes
Your full name	Yes	
Official email address	Yes	
Phone number	Yes	
Organisation	Yes	Becomes the organisation name

Field	Required?	Notes
Organisation type	Yes	Government / NGO / Donor
Role box	Yes	Dashboard viewer is the default
Province, District	Extension officer only	Optional otherwise
Password, Confirm, Terms	Yes	Min 6 characters

> **Note:** The person who registers an organisation becomes its first administrator. They can then add colleagues with the right roles from **Team & Branches** (see "Team and Permissions").

If something goes wrong during registration

Message	What it means and what to do
Please agree to the Terms of Service to continue.	Tick the Terms box.
Passwords do not match.	The two password boxes differ. Retype both.
Password must be at least 6 characters.	Use a longer password.
Please enter a phone number.	Phone is mandatory. Fill it in.
Please fill in all required fields.	Business step 1: name, email or password is empty.
Please enter your farm name and type.	Business step 2: both are required.
Phone number is required.	The phone number reached the server empty.
A user with this email already exists. / An account with this email already exists.	That email is taken. Sign in instead, or use another email.
A user with this phone number already exists.	That phone number is taken.
Invalid business type. / Invalid role selected. / Invalid organisation type for a government / partner account.	You should not normally see these. Reload the page and try again.
Something went wrong. Please try again.	A temporary problem on the server. Wait a moment and retry.
Network error …	Your internet connection or the server is down. Check your connection.

Signing in, signing out and your session

Signing in

Step by step

1. Press **Sign in** (top right of the landing page). The **Sign In** tab opens with the heading **Welcome back**.
2. Type your email in the first box (placeholder "Email address").
3. Type your password. Use the eye icon to show it.
4. Press **Sign In**.

What happens next

- An **Individual** account goes to the customer page.
- A **Farm** or **Cooperative** account goes to the farm workspace (or to the set-up wizard if the company has not finished set-up yet).
- Any other **Business** type goes to its vendor workspace.
- **Government**, **Extension** and **Partner** accounts go to their own dashboards.

If you have a team member who was added without an email address, the platform stores a made-up internal address for them and they are meant to sign in with their phone number. The sign-in box is labelled "Email address", and some browsers refuse text without an @ in that kind of box.

> **Tip:** Give every team member a real email address when you add them. It is the most reliable way to sign in.

If sign-in fails

Message	What it means
Invalid phone/email or password.	The email (or phone) or password is wrong. Retype carefully. Passwords are case sensitive.
Account is disabled.	An administrator has deactivated your account. Contact them.
Please sign in to continue.	Your session has ended. Sign in again.
Network error …	No connection to the server.

Forgot password

The sign-in window has a **Forgot password?** link. **It does not do anything yet.** There is no self-service way to reset a forgotten password and no screen to change a password inside the app. If you forget your password, contact your company administrator or AGRINUXES support. Keep your password safe, and when an administrator gives you a temporary password, note that you cannot change it from inside the app today.

Signing out

- **Individual customers: Sign out** is in the top bar (and in the menu on a phone), and again at the bottom of the **Profile** page.
- **Vendor workspaces, Government, Extension and Partner: Sign Out** is at the bottom of the left sidebar.
- **Farm and Cooperative workspace:** the left sidebar does **not** have a sign-out button. Your session ends by itself after 8 hours (see below). On a shared computer, always use a private browser window, or clear the site's saved data in your browser when you finish.

When you do sign out, the platform also removes the saved copy of the company workspace that it keeps in your browser, so the next person on the same device does not see your company.

> **Watch out:** On a computer that other people use, never leave a farm workspace open. Because there is no sign-out button in the farm sidebar, close the private window or clear the browser's data for the site.

Sessions and signing in on a second device

- Signing in gives your browser a pass that lasts about **8 hours**. After that, the next time the page loads you are sent back to the public page and must sign in again.
- You can be signed in on **several devices at the same time**. A new sign-in on a phone does not sign out your laptop. Both see the same company data (see "Where your data is kept").
- Closing the browser tab does not sign you out. Opening the site again on the same device in the next 8 hours brings you straight back in.
- A person who is deactivated by an administrator can no longer sign in.

The set-up wizard

The first time a director of a Farm, Cooperative or vendor company signs in, the platform shows a **set-up wizard** before anything else. It prepares your company workspace. The wizard has five steps, shown as numbered dots along the top: **Welcome**, **Business Type**, **Your Business**, **Setup**, **Ready**. Vendors skip the last step and go straight to their workspace.

Before you start: register a Business account first (see "Registering for an account"). The wizard needs about two minutes.

> **Watch out:** Do not add team members until the owner has finished the wizard. A team member who signs in while the company workspace is still empty is shown the wizard too, and could start setting it up in the owner's place.
>
> **Watch out:** Pick the **same business type** in the wizard that you chose at registration. The wizard does not pre-select your registration choice (it always starts on **Farmer / Farm**). If you pick a different type, your account is updated to the new type, but the screen you are looking at may still follow the old one until you reload or sign in again.

Step 1: Welcome

A welcome screen titled **Welcome to AGRINUXES** with four small boxes (All business types, Auto-configured, Marketplace access, Grow together). Press **Get started**.

Step 2: Business Type

The heading is **What type of business are you?** Press one card. A tick shows your choice. The choice decides which workspace you get: farm tools (Farmer or Cooperative) or vendor tools (everything else).

Card	Description shown	Workspace after set-up
Farmer / Farm	Manage crops, livestock, fish, and farm cycles	Farm workspace
Agro Dealer	Sell seeds, fertilizers, pesticides & farm inputs	Vendor: Agro Dealer
Vet / Animal Health	Veterinary services, consultations & treatments	Vendor: Vet Services
Equipment Hire	Rent out tractors, harvesters & machinery	Vendor: Equipment Hire
AgriFood Seller	Sell fresh produce, food products & farm outputs	Vendor: AgriFood Seller
AgriSupply Provider	Supply farm materials, packaging & logistics	Vendor: AgriSupply
AgriServices Provider	Irrigation, fencing, soil testing & other services	Vendor: AgriServices
Agro Processor	Process raw farm produce into finished goods	Vendor: Agro Processor
Transport / Haulage	Move produce and inputs between farms, depots and markets	Vendor: Transport & Logistics
Cooperative	Smallholder group running shared crops, livestock and marketing	Farm workspace

A blue note says individual buyers do not need a business account. Press **Continue**, or **Back** to return.

Step 3: Your Business

The heading is **Tell us about your business**. It sets the name, location and currency across the platform.

Field	Required?	Choices
Business Name	Yes	Free text. Example: Sunrise Poultry Farm. If you leave it empty you see **Business name is required**.

Field	Required?	Choices
Country	No (starts on Zambia)	Zambia, South Africa, Nigeria, Kenya, Tanzania, Uganda, Zimbabwe, Malawi, Mozambique, Ghana, Cameroon, Ethiopia, Rwanda, DR Congo, Botswana, Namibia, Senegal, Côte d'Ivoire, Other
Currency	No (starts on ZMW)	ZMW, USD, ZAR, KES, NGN, GHS, TZS, UGX, ETB, XOF

Press **Continue**. At this moment the workspace is created, and your business type, country and currency are also saved to your company account.

What the name, country and currency change afterwards: the business name appears under the logo in the sidebar and as the round initial at the top right. The currency is shown in the top bar and used wherever money is shown. The workspace timezone is set to Africa/Lusaka.

> **Watch out:** The business name you type here is the name of your workspace. It does not automatically copy the name you gave at registration, so type it again exactly as you want it to appear.

Step 4a: Setup for Farmers and Cooperatives

The heading is **What does your farm operate?** You do two things: choose categories, then add at least one **enterprise**.

An **enterprise** is one line of business on your farm, for example "Broilers", "Maize" or "Tilapia ponds". Each enterprise is built from a **template**, a ready-made production plan with stages, record forms and care guides (see Part 2 — Templates, Record Fields and Care Guides).

Step by step

1. Press every **category card** that fits your farm. A tick marks the choice. You can pick several.
2. Under the cards, a panel appears for each category you picked, listing its templates. Press a template to add it as an enterprise. You can press the same template again to add a second one.
3. Each added enterprise appears in the green box **Added enterprises** with a name like "Broiler Chickens 1". Click in the name to rename it. Press the small ✕ to remove it.
4. When you have at least one enterprise, press **Finish setup**.

The 14 category cards

Category	Examples shown
Poultry & Birds	Chicken, duck, turkey, guinea fowl, quail, goose, ostrich, pigeon
Livestock	Cattle, goats, sheep, pigs, rabbits, horses, camels
Aquaculture	Tilapia, catfish, trout, carp, shrimp, aquaponics
Crops & Grains	Maize, wheat, rice, soybean, millet, sorghum, cassava, yam, sugarcane
Horticulture	Tomato, onion, pepper, carrot, kale, watermelon, garlic, eggplant
Greenhouse	Cut roses, herbs, hydroponic lettuce, bell pepper, strawberry
Orchards & Tree Fruit	Mango, avocado, citrus, banana, guava, pawpaw, passion fruit, macadamia
Apiary & Beekeeping	Beekeeping, honey, wax, pollination services
Mushroom Cultivation	Oyster, shiitake, button, portobello
Insects & Worms	Black soldier fly, crickets, mealworms, silkworms, vermiculture, snails, stingless bees
Aquatic Plants & Algae	Seaweed farming, spirulina, microalgae

Category	Examples shown
Forestry & Agroforestry	Timber plantations, agroforestry, silvopastoral systems
Agro-Processing	Milling, dairy, honey, cassava, juice, feed mill, meat processing
Agricultural Services	Vet services, consulting, equipment hire, lab testing, farmer training

Messages you may see

- **Select at least one category to continue.** (amber text) — pick a category card.
- **Add at least one enterprise above to continue.** (amber text) — press a template. The **Finish setup** button stays grey until you do.

Step 5: Ready (Farmers and Cooperatives)

A green tick and the heading **You're all set!** show how many enterprises were created and list them with their template names. Press **Open my workspace**. The wizard ends and the farm workspace opens on the Dashboard.

Step 4b: Setup for vendors

The heading is **What do you offer?** You tick the products or services your business provides. Press **Finish setup** once at least one is ticked (otherwise you see **Select at least one to continue.**). There is no "Ready" screen: the vendor workspace opens immediately.

Business type	Options offered
Agro Dealer	Seeds, Fertilizers, Pesticides, Animal Feeds, Farming Tools, Irrigation Supplies
Vet / Animal Health	General Vet Consults, Vaccination Programs, Surgery, Lab Diagnostics, Farm Visits, Livestock Nutrition
Equipment Hire	Tractors, Ploughing, Planters, Harvesters, Irrigation Rigs, Spray Equipment
AgriFood Seller	Grains & Cereals, Vegetables, Fruits, Poultry & Eggs, Meat & Fish, Dairy Products
AgriSupply Provider	Packaging Materials, Cold Chain Logistics, Transport & Delivery, Storage Solutions, Farm Chemicals
AgriServices Provider	Land Preparation, Irrigation Installation, Fencing & Security, Soil & Water Testing, Consulting
Agro Processor	Grain Milling, Oil Pressing, Dairy Processing, Meat Processing, Drying & Packaging, Fermentation
Transport / Haulage	Grain Haulage, Livestock Transport, Refrigerated Transport, Input Delivery, Last-mile Delivery, Cross-border Freight

Your ticks are saved with the company workspace as your list of service categories.

What each choice changes afterwards

Choice	What it controls
Business type	Whether you see the farm workspace or a vendor workspace, and which tabs the vendor workspace has. It is also how government and programme dashboards count you (farm, vet, dealer and so on).
Business name	The name shown in the sidebar and top bar.
Country and currency	The currency shown in the top bar and on money screens.
Categories and enterprises (farms)	Which production pages and templates your farm starts with. Each enterprise opens its own production page with cycles, stages and records.

Choice	What it controls
Service categories (vendors)	A record of what you offer. Your public listing and services are managed in the vendor tabs (see Parts 6 and 7).

Changing your set-up later

- **Add more enterprises:** at any time from **Settings**, press **Add Enterprise** (see the Settings chapter), or add them from the Production page.
- **Business name, country, currency, business type:** the **Business Profile** card in Settings only *shows* these. There is no edit button. The only way to change them is **Reset workspace** (below), which erases the workspace and runs the wizard again.
- **Vendor service categories:** there is no screen to re-tick them. Keep your services up to date in your vendor tabs instead.

Reset workspace and its warning

Reset workspace (re-run onboarding) is in the **Danger Zone** at the bottom of **Settings**. It is shown only to the **director**, and only in the farm workspace (vendor workspaces do not have this button).

What the warning says: *"This will erase the whole company workspace for every member and restart onboarding. This action cannot be undone."* When you press the button, the browser asks **"Are you sure? This will reset the entire workspace for everyone in your company and cannot be undone."**

What it erases: the shared workspace — business profile, enterprises, production cycles with their stages, daily records and events, the care-guide ticks, your company's saved templates ("My templates") and the edit-approval settings and queue. It also clears the copy kept in your browser and reloads the page, and then the wizard starts again for everybody.

What it does not erase: the Finance ledger, Sales (customers, orders, payments) and Inventory are stored separately in the company account; the Reset button does not touch them. Team members, roles, branches and permissions stay too. Items kept only in a browser (see "Where your data is kept") are not erased on other devices.

> **Watch out:** Reset removes every production cycle and record the whole company has entered. Use **Backup & Restore** only for browser-only items; it does **not** back up production cycles. If you only want to correct a name, think twice before using Reset.

Finding your way around

The farm workspace (Farmers and Cooperatives)

The farm workspace has a dark **sidebar** on the left, a white **top bar** and the main page area.

The sidebar has the logo and your business name at the top, then four labelled groups, then the bottom items.

- On a large screen the sidebar is always there. The **Collapse** button at the very bottom shrinks it to a thin strip of icons; hover over an icon to see its name. Press the arrow again to widen it.
- On a phone or narrow window the sidebar is hidden. Press the **menu icon** (three lines) at the top left of the top bar to slide it in. A dark layer covers the page; press the layer, or choose a page, and the sidebar slides away again. The Collapse button is not shown on small screens.

- You only see the pages your role allows. If you cannot see a menu item, ask your administrator (see "Team and Permissions").

The top bar shows the name of the current page, a **bell** (see "Notifications"), your currency (hidden on very small screens) and a round badge with the first letter of your business name. The badge is not a menu.

Every menu item

Group / item	What it is for	Explained in
OPERATIONS		
Dashboard	Overview of the farm, shortcuts to enterprises	Part 3
Production	Your enterprises, cycles, stages, daily records, events	Part 3
Processing	Recipes and batches that turn raw produce into finished goods	Part 3
Inventory	Stock items, movements, alerts	Part 4
Sales	Customers, orders, payments	Part 4
Trade & Export	Contracts, buyers, export documents	Part 4
Finance	Income and expense ledger	Part 4
Credit Profile	A credit score and a shareable lender report	Part 4
Reports	Business reports and charts	Part 4
MARKETPLACES		
AgriFood Market	Post and browse food listings	Part 7
AgriSupply	Post and browse farm-supply listings	Part 7
AgriServices	Post and browse service listings	Part 6
Agro Dealers	Directory of input dealers	Part 7
Equipment Hire	Directory of equipment owners, bookings	Part 6
Vet Services	Directory of vets, appointments	Part 6
AI & INTELLIGENCE		
Smart Engine	Alerts and recommendations drawn from your data	Part 5
AI Insights	Predictions	Part 5
Financial AI	Money insights	Part 5
Smart Vision	Image and camera tools	Part 5
Weather	Forecasts, fields, satellite plant-health readings	Part 5
Sustainability	Sustainability tracking	Part 5
Smart Devices	Connected sensors and gadgets	Part 5
Water Mgmt, Aquaculture, Poultry Houses, Energy, Soil Depth, Automation	Device dashboards and rules	Part 5
Device Gateway, Cold Chain, Farm Gateway	Gateways and cold-room monitoring	Part 5
FARM MANAGEMENT		
Notifications	Alert centre for device alerts	This part and Part 5
Animal Health	Vaccinations, treatments, vet visits	Part 5
Staff & Labour	Farm staff and time logs	Part 5
Procurement	Suppliers and purchase orders	Part 5

Group / item	What it is for	Explained in
Requisitions	Internal requests for items	Part 5
Activity Log	Scheduled activities	Part 5
Crop Rotation	Fields and rotation planning	Part 5
Bottom of the sidebar		
Team & Permissions	People, roles, branches, audit log	This part
Settings	Business profile, consent, approval control, danger zone	This part
Backup & Restore	Download or restore browser-only data	This part
Collapse	Shrinks the sidebar (desktop only)	This part

How the menu follows your permissions: each menu item is tied to a module (for example Inventory belongs to the Feed & Inventory module). If your role cannot **view** that module, the menu item is hidden. Dashboard, Notifications and Backup & Restore are always shown. Team & Permissions is shown only to administrators (or to people whom an administrator has given view access to it). The table of modules and roles is in the Team chapter.

> **Tip:** If a colleague tells you about a page you cannot see, it is almost certainly a permission, not a fault. Ask the director to open **Team & Permissions** and check your access.

The vendor workspace (every other business type)

The vendor workspace has a sidebar of **tabs** and a main area. There is no top bar with a bell.

- The three-line button at the top of the sidebar widens or narrows the sidebar. Narrowed, you see only icons.
- The sidebar stays on screen on a phone. Press the three-line button to narrow it to icons so the page has more room.
- The top of the main area shows your type and the current tab, and your district (or "Set your district in Settings").
- **Sign Out** is at the bottom of the sidebar.
- While your business workspace is being prepared you may see **Setting up your business workspace…** for a moment.
- If a tab runs into trouble you see **This tab hit an error: …. Try another tab or reload.** Other tabs keep working.

Every vendor type has an **Overview** tab first and these tabs at the end: **Clients**, **Invoices**, **Revenue**, **Marketplace Listing**, **Users & Permissions** (only for people who may manage the team) and **Settings**. The tabs in between depend on your type:

Vendor type	Tabs between Overview and Clients
Vet Services	Appointments, Patient Records, Prescriptions, Services Catalog
Equipment Hire	Fleet Management, Bookings, Maintenance
Transport & Logistics	Transport Jobs, Vehicles, Maintenance
Agro Dealer	Product Catalog, Orders, Stock Management
AgriSupply	Supply Catalog, Purchase Orders, Stock Management, Deliveries
AgriFood Seller	Produce Listings, Buyer Orders, Pricing & Stock

Vendor type	Tabs between Overview and Clients
AgriServices	Services Catalog, Job Schedule
Agro Processor	Farm Sourcing, Processing Logs, Inventory, Traceability, Orders

Parts 6 and 7 explain each of these tabs. This part explains the last two: **Users & Permissions** (the same team page described below) and **Settings** (described below).

The individual customer page

Individual accounts do not have a business workspace. The customer page has a top bar with **Home**, **Marketplace**, **Saved** and **Profile**, your first name, and **Sign out**. On a phone these sit behind the menu icon.

Page	What it shows
Home	A greeting with your name and email, **Browse Marketplace** and **Saved** buttons, three counters (Saved, Browsed, Calls) and four featured verified providers
Marketplace	A similar set of sample listings to the public page, with search and category pills (All, Vet Services, Equipment Hire, Agro Dealers, AgriFood, AgriSupply, AgriServices)
Saved	Listings you marked with the heart icon, or "Nothing saved yet"
Profile	Your name, **Email**, **Phone**, **Account type** (Individual / Customer), a tip about registering a farm account, and **Sign out**

On a card, the heart saves or removes a favourite, **Call** phones the provider and **Details** opens a window with the full listing.

> **Watch out:** The saved hearts are kept only while the page is open. If you reload or sign in again, the list is empty. The **Order** and **Enquire** buttons in the detail window do not place a real order yet; use **Call directly** to contact the seller.

The Government, Extension and Partner pages

These accounts have their own sidebar, with **Sign Out** at the bottom. Tabs are shown only when the person's role includes them.

Account	Sidebar tabs
Government	National Overview, Ecosystem, National Map, Production, Markets & Prices, Disease & Alerts, Climate & Sustainability, District Registry, Advisories, Programmes, Team & Branches
Extension officer / supervisor	My Caseload, Visits & Follow-ups, Add Farms, Programmes, Team & Branches
Partner	Programmes, then (under "District data") National Overview, Ecosystem, National Map, Production, Markets & Prices, Disease & Alerts, Climate & Sustainability, District Registry, Advisories, and Team & Branches (under "Admin")

Part 8 explains these. **Team & Branches** is the same team page described in this part.

Settings (farm workspace)

What it is for: Settings shows your business profile, lets the director control data sharing, shows your extension officer and programmes, lists your enterprises, controls edit approval, and holds the Danger Zone. The page is titled **Platform Settings**.

Before you start: Settings is shown to roles that have view access to the Settings module. Directors have it; Production Manager, Finance Manager, Sales Manager and Supervisor have view access by default. Some cards can only be changed by the director.

Step by step: press **Settings** in the sidebar (at the bottom). Scroll down through the cards in the order below.

Business Profile

A read-only card with **Name**, **Country**, **Currency** and **Timezone** (Africa/Lusaka). To change these, see "Changing your set-up later".

Share with government & partners

This card is described fully in the chapter "Data-sharing consent". It also contains your **Province** and **District** boxes and the **Household profile**.

Your extension officer

Shows the government extension officer assigned to your farm: name, their organisation, and clickable phone and email. If none is assigned you see: *No extension officer is assigned yet. Officers in your district can add your farm once data sharing is enabled and your province / district are set.* If an officer has visited you, a **Visit log** lists the last ten visits with the purpose, date, officer, **Findings**, **Advice** and any planned follow-up date.

Development programmes

This card appears only when your farm has been enrolled in a programme. For each programme it shows the name, the partner, the funder, a status tag (such as Active), the cohort, and a list of **Support received** (type, description, reference, date and value in the programme's currency) with a running total.

Enterprises

The card heading shows how many enterprises you have, for example **Enterprises (3)**. Each row shows the icon, name, template name, location (if any) and a green dot (active) or grey dot (inactive). This list is for reference; to edit an enterprise, go to **Production**. If you have none, it says **No enterprises yet. Add one above.**

Add Enterprise (green button):

1. Press **Add Enterprise**. A window opens: *Choose a template and name your operation*.
2. Type the **Enterprise Name** (required). Example: Mpongwe Fish Ponds.
3. Choose a **Production Template** (required). Use the category buttons (All, Poultry & Birds, Livestock, Aquaculture, Crops, Horticulture, Greenhouse, Orchard, Apiary, Mushroom, Processing, Services) or the search box. Your own saved templates come first and carry a **My template** badge.
4. Optionally add a **Location** (example: Plot 5, Kabwe Road) and **Notes**.
5. Press **Add Enterprise**. The button briefly says **Saved!** and the window closes.

The footer shows the template you selected, or **No template selected**. If nothing matches the search, you see **No templates match your search**. The **Add Enterprise** button stays grey until both a name and a template are chosen.

> **Note:** The category buttons in this window do not include Insects & Worms, Aquatic Plants & Algae or Forestry & Agroforestry. Use **All** or the search box to find those templates.

Edit & Approval Control

This card lets the company require a second person to approve changes to production records. It is saved with the company workspace, so it applies on every device.

What you will see

Control	What it does
Require approval for edits (switch)	When on, edits and deletions of production records, events and cycles are held as "pending" until an approver accepts them. When off, edits apply immediately.
Your name / Staff member	A free-text name used on the requests (example: John Banda)
Approver name	The name of the person who approves (example: Farm Manager). It is shown as "reviewed by" on decisions.
Require a reason for every edit or deletion (tick-box)	Makes the edit windows ask for a reason

A yellow tag with a clock shows how many requests are pending. A **Settings** badge in the sidebar also shows the pending number.

Pending Edits: each request shows what is being changed, the field, who asked, the **Before** and **After** values (trimmed to 80 characters) and the **Reason**. Press **Approve** to apply the change, or **Reject** to open a small window: type an optional **Reason for rejection** and press **Reject** (or **Cancel**).

Recent Decisions: the last ten approved (green) and rejected (red) requests, with who asked, who reviewed and any rejection note. The small ✕ on a row removes it from the list.

> **Watch out:** The names are typed text, not logins. The page does not check *who* is pressing **Approve**: anyone who can open Settings can approve a pending request. Keep Settings access limited to people you trust, using Team & Permissions.

Danger Zone

Shown to directors only. See "Reset workspace and its warning" above.

Settings in a vendor workspace

In a vendor workspace the **Settings** tab holds the same **Share with government & partners** card (data sharing, province and district, household profile) followed by a **Business profile** form and a **Team** list.

Business profile form

Field	Notes
Business name *	Required
Marketplace category	The group your listing appears under (Agro Dealer / Input Supplier, Equipment Hire, Veterinary Services, Agro Processing, Transport & Logistics, Agricultural Finance, Crop / Livestock Insurance, Extension & Advisory Services, Cold Storage, Certification & Inspection, AgriFood Seller / Fresh Produce, Agricultural Services)
Tagline	One line customers see first
Description	Longer text
Phone, WhatsApp, Email, Website	Contact details
District, Town, Address	Where you are. Your district is also shown at the top of the workspace.
Districts served	Comma-separated, for example Chongwe, Kafue, Chilanga

Field	Notes
Specialties	Comma-separated, for example Poultry, dairy, maize seed
Service hours	Example: Mon-Fri 08:00-17:00
Year established	A number
Business registration no., TPIN / tax id	Your registration and tax numbers
We travel to the farm (tick)	Shows you offer mobile service
Emergency call-outs available (tick)	Shows you take emergencies

Press **Save profile**. You see **Business profile saved.** or the error message.

Team (vendor) is a simple list of your people (name, role, phone, licence, active) with **+ Add person**, **Edit** and **Remove**. Roles: Owner / Director, Branch Manager, Veterinary Officer, Agronomist, Sales Representative, Technician, Driver / Operator, Other. These people are **staff records for assigning work** (for example to appointments and jobs). They do not get logins. To give someone a login, use **Users & Permissions**.

Team and Permissions

What it is for: this is where an administrator adds people to the company, gives each person a role, decides exactly what each person may see and change, groups people into branches, and reviews a record of every access change. It works the same way for farms, vendors, government offices and partner organisations. The roles and the list of modules change with the type of organisation.

Where to find it

Account	Where
Farm / Cooperative	**Team & Permissions** at the bottom of the sidebar
Vendor	**Users & Permissions** tab
Government, Extension, Partner	**Team & Branches** tab

Before you start

- Only an **administrator** can add or change people. An administrator is the person who registered the company, anyone with the **Director**, **Administrator** (government or partner) role, and anyone an administrator has marked as an administrator.
- Other people can open the page only if they have been given view access to "Team & Permissions". They see everything in read-only form. The heading then says **read-only (you are not an administrator)**.
- The header line shows your organisation, the number of active members and the number of active branches.

The page has three tabs: **Members**, **Branches** and **Audit log**.

Members

What you will see: a table with these columns.

Column	Meaning
Member	Name, with a green shield if they are an administrator and "(you)" next to your own name. Below the name: their email and phone (or just the phone if they have no email).

Column	Meaning
Role	Their role. Administrators can change it with a drop-down (not on their own row).
Branch	Their branch, or **Org-wide**. Administrators can change it with a drop-down.
Access	**Full access** for administrators; otherwise "N of M modules" they can view. A yellow **custom** tag appears when the person has their own permission settings instead of the role's default.
Status	**Active** or **Deactivated**
(buttons)	Shield: edit permissions. Green shield: make or remove administrator. Person icon: deactivate or reactivate

Tick **Show deactivated** above the table to include people who have been switched off.

Adding a person

1. Press **Add member**. A form opens.
2. Type **Full name** (required).
3. Type **Phone** (required). The hint says "Phone (login if no email)".
4. Optionally type **Email**. Give an email whenever you can: it makes sign-in simpler.
5. Pick a **Role** from the list. A line beside the form describes what the chosen role does.
6. Pick a **Branch**, or leave **Organisation-wide (no branch)**.
7. Optionally type **Set a password** (at least 6 characters). If you leave it empty, the platform makes up a 10-character password.
8. Press **Add member** (the button shows "Adding…" while it works).

What happens next

- A yellow box appears: **Temporary password for (name)**, showing the **Login** (email, or phone if no email) and the **Password**. It is shown **once**. Press the copy icon to copy both, then send them privately (for example by WhatsApp message to the person only). Press **X** to dismiss the box.
- A green message confirms: "(Name) added as (Role)."
- The person gets a welcome notice inside the platform. If you gave a real email address and the platform's email service is switched on, they are also emailed their login and temporary password.
- The new person can sign in at once. They cannot change their password from inside the app today.

If the person already exists the form shows a red message:

Message	Meaning
A user with this phone number already exists in your organisation.	That phone number is already used by someone in your company.
A user with this email already exists.	That email is used elsewhere on the platform.
Password must be at least 6 characters.	Choose a longer password.
Invalid role for a farm organisation. Allowed: …	The chosen role does not belong to this organisation type.
Branch not found	The branch was removed. Refresh and pick another.
Permission denied: only an organisation administrator can add team members	You are not an administrator.

Changing a role, branch or administrator status

- **Role:** choose a new one from the Role drop-down on the person's row. A green message says "(Name) is now (Role)." You cannot change your own role.
- **Branch:** choose from the Branch drop-down. The message says "(Name) moved to (Branch)." or "… organisation-wide."
- **Administrator:** press the green shield on the row (not on your own row). The message says "(Name) is now an administrator." or "(Name) is no longer an administrator."

Rules and error messages:

Message	Meaning
You cannot remove your own administrator access	Ask another administrator to do it.
An organisation must keep at least one administrator	Make someone else an administrator first.
director is an administrator role; change the role instead	A Director is always an administrator. To remove admin rights, change their role first.
Administrators always have full access; remove admin first to restrict them	You cannot edit the permissions of an administrator.
Invalid role.	The role is not valid for this organisation.

Deactivating and reactivating

Press the person icon on the row. For deactivating you are asked **"Deactivate (name)? They will no longer be able to sign in."** Their records stay. They are listed as **Deactivated** (dimmed) when **Show deactivated** is ticked. Press the person icon again to reactivate. You cannot deactivate yourself (**You cannot deactivate yourself**). There is no way to delete a person.

The roles for each organisation type

Farms and vendors (every Farm, Cooperative and vendor company)

Role	Description shown	In plain words
Director / Owner	Full access, manages the team	Does everything. Is always an administrator.
Production Manager	Runs production, inventory and procurement	Edits production, inventory, procurement, biosecurity; views reports and settings
Finance Manager	Finance, sales, credit profile, reports	Edits finance, sales, inventory, procurement, credit profile; views reports and trade documents
Sales Manager	Sales, marketplace, trade documents	Edits sales, trade documents, marketplace; views stock and reports
Supervisor	Day-to-day production records	Edits production records, inventory and biosecurity; views procurement and devices
Farmhand	Logs daily records	Can add (not change) production records; views the dashboard and planner
Veterinary Officer	Animal health and biosecurity	Edits biosecurity and vet records; can add production records
Driver	Mobile app, deliveries	Views the dashboard, planner and mobile app only

When you add a person, the role list starts on **Driver** (the last one), so check it before you press **Add member**.

Government offices

Role	Description shown
Administrator	Manages the team, branches and advisories; sees everything
Dashboard viewer	Read-only district & national dashboards
Extension supervisor	Oversees officers in the branch, issues advisories
Extension officer	Caseload of farms, visits, direct advice

NGO / development partner and donor programmes

Role	Description shown
Administrator	Manages team, branches and programmes
Programme manager	Runs programmes: enrolment, support, notices
M&E officer	Records indicator readings and views results
Observer (donor / auditor)	Read-only access to programmes and dashboards

A person's role must match their organisation. A farm cannot be given a government role, and a government office cannot be given a farm role.

The module permission matrix

Every organisation has a list of **modules**: the areas of the platform that can be switched on or off for each person. Each module has four actions:

Action	What it lets the person do
View	See the module (its menu item shows; without View, it is hidden)
Create	Add new records
Edit	Change existing records
Delete	Remove records

Creating, editing or deleting always needs View too. The platform enforces this on the server as well as on the screen, so a hidden button is not the only protection.

Farm and vendor modules (27)

Group	Modules
Overview	Dashboard, Smart AI Engine, Daily Planner
Production	Broiler Poultry, Village Chicken, Piggery, Fish Farming, Duck Management, Goats & Sheep, Horticulture, Production Records
Operations	Feed & Inventory, Sales & Customers, Financial Management, Credit Profile, Human Resources, Procurement, Biosecurity & Vet, Weather & Fields, Smart Devices & IoT
Strategy	Reports & BI, Trade & Export, Marketplace, Assets & Infra, Mobile App, Settings, Team & Permissions

Which sidebar item follows which module (farm workspace)

Sidebar item	Needs View on
Production, Processing, Smart Vision	Production Records
Inventory	Feed & Inventory

Sidebar item	Needs View on
Sales	Sales & Customers
Trade & Export	Trade & Export
Finance, Financial AI	Financial Management
Credit Profile	Credit Profile
Reports, Sustainability	Reports & BI
AgriFood Market, AgriSupply, AgriServices, Agro Dealers, Equipment Hire, Vet Services	Marketplace
Smart Engine, AI Insights	Smart AI Engine
Weather	Weather & Fields
Smart Devices, Water Mgmt, Aquaculture, Poultry Houses, Energy, Soil Depth, Automation, Device Gateway, Cold Chain, Farm Gateway	Smart Devices & IoT
Animal Health	Biosecurity & Vet
Staff & Labour	Human Resources
Procurement, Requisitions	Procurement
Crop Rotation	Daily Planner
Settings	Settings
Team & Permissions	Team & Permissions

The Dashboard, Notifications, Activity Log and Backup & Restore items are not tied to a module and are shown to everyone.

What each farm role can do by default

Role	View only	View, add and change (no delete)	View and add only / full
Director			Everything, including delete (full access)
Production Manager	Dashboard, Smart AI Engine, Reports & BI, Settings, Weather & Fields, Smart Devices & IoT, Marketplace	Daily Planner, all eight production modules, Feed & Inventory, Procurement, Biosecurity & Vet	
Finance Manager	Dashboard, Daily Planner, Reports & BI, Trade & Export, Settings, Marketplace	Financial Management, Sales & Customers, Feed & Inventory, Procurement, Credit Profile	
Sales Manager	Dashboard, Daily Planner, Feed & Inventory, Reports & BI, Settings, Weather & Fields	Sales & Customers, Trade & Export, Marketplace	
Supervisor	Dashboard, Daily Planner, Procurement, Settings, Weather & Fields, Smart Devices & IoT	Eight production modules, Feed & Inventory, Biosecurity & Vet	
Farmhand	Dashboard, Daily Planner, Mobile App, Weather & Fields		Eight production modules
Veterinary Officer	Dashboard, Daily Planner, Mobile App	Biosecurity & Vet	Eight production modules
Driver	Dashboard, Daily Planner, Mobile App		

"Eight production modules" means Broiler Poultry, Village Chicken, Piggery, Fish Farming, Duck Management, Goats & Sheep, Horticulture and Production Records. Only the Director (and other administrators) can **delete**.

Government modules: District & national dashboards, District registry, Advisories, Extension caseload, Visits & follow-ups, Programmes, Participant enrolment, Support ledger, M&E indicators, Programme notices, Team & Permissions, Organisation settings.

Government role	By default
Administrator	Everything, including the team
Dashboard viewer	View only: dashboards, registry, programmes, enrolment, support ledger, M&E
Extension supervisor	View: dashboards, registry, settings. Full control of caseload and visits. View and add advisories. View, add and change programmes, enrolment, support, M&E and notices
Extension officer	View: dashboards, registry, programmes, enrolment, support. View, add and change caseload and visits. View and add advisories

Partner modules: Programmes, Farm enrolment, Support ledger, M&E indicators, Programme notices, District & national dashboards, District registry, Advisories, Team & Permissions, Organisation settings.

Partner role	By default
Administrator	Everything, including the team
Programme manager	Full control of programmes, enrolment, support, M&E and notices. View dashboards, registry, settings. View and add advisories
M&E officer	View programmes, enrolment, support, dashboards, registry, settings. View, add and change M&E indicators
Observer	View only: programmes, enrolment, support, M&E, notices, dashboards, registry

Giving one person different permissions (per-person overrides)

Roles are starting points. You can give one person a custom set without changing the role.

Step by step

1. In the **Members** tab, press the **shield** icon on the person's row (administrators do not have this icon, because they always have full access).
2. A window titled **(name) — module permissions** opens, with a table. Rows are the modules, grouped under headings; columns are **View**, **Create**, **Edit**, **Delete** and **All**.
3. Tick or untick boxes. Ticking Create, Edit or Delete ticks View for you. Unticking View clears the other three. The **all** / **none** link at the end of a row ticks or clears the whole row.
4. A small amber dot beside a module name means it differs from the role's default.
5. Press **Save permissions**. A green message says "Permissions saved for (name)."

To go back to the role default, open the same window and press **Reset to role default**. The message says "(Name) reset to the (Role) default." The yellow **custom** tag disappears.

> **Note: Good to know:** a saved custom set **replaces** the role default completely. Anything you leave unticked is off, even if the role would normally allow it. If you later change the person's role, their custom set stays until you reset it.

> **Tip:** To make a read-only accountant, add them as a Finance Manager, then open permissions and untick Create and Edit on the modules they should only view.

Branches

A **branch** is a site or office of your organisation. Branches let you group people and, for government and partner organisations, limit what people see to a place.

What you will see: the list of branches, each with its name, an **HQ** tag if it is the headquarters, its code, its kind, district and province, address and number of members. A dimmed row is deactivated. If you have none it says **No branches yet — the whole organisation acts as one unit.**

Branch kinds

Organisation	Kinds you can choose
Farm / vendor	Farm site, Warehouse / pack-house, Sales outlet, Office
Government	Headquarters, Provincial office, District office (DACO), Agricultural camp, Research station
NGO / Donor	Country office, Field office, Project site

Add a branch

1. Press **Add branch**.
2. Type the **Branch name** (required; names must be different within your organisation).
3. Choose the **kind**.
4. Optionally fill **Code**, **Province**, **District**, **Address** and **Phone**.
5. Optionally tick **Headquarters — members here are organisation-wide, not scoped to a district**. Only one branch can be the headquarters: ticking it on one branch unticks it on the previous one.
6. Press **Create branch**. A message says "(Name) created."

Each row has **Edit**, **Deactivate** / **Reactivate** and, when the branch has no members, **Delete** (after a confirmation). If a branch still has members you see **Move or deactivate the members of this branch first**.

What branches do

- **Farm and vendor:** "Farm sites, pack-houses and outlets. Members can be assigned to a site." They are labels for organising your people.
- **Government:** "HQ, provincial and district offices, camps. Members of a district office or camp only see and act on their own district; provincial members see their province; HQ sees the nation." So set the **Province** and **District** on the branch.
- **NGO / Donor:** "Country office and field offices / project sites."
- People with no branch, or in the HQ branch, are organisation-wide.

Audit log

An administrator-only tab. Everyone else sees **Only administrators can view the audit log.** It lists the 100 most recent access changes: date and time, what happened, who did it, and who it was done to, with details.

Entry	Recorded when
Member Invited	A person was added (role and branch shown)
Role Changed	A role was changed
Permissions Changed / Permissions Reset	A custom set was saved / removed

Entry	Recorded when
Member Deactivated / Member Activated	A person was switched off / on
Member Branch Changed	A person moved branch
Admin Granted / Admin Revoked	Administrator status changed
Branch Created / Branch Updated / Branch Deleted	A branch changed

If nothing has happened yet it says **No changes recorded yet.**

Who can do what (summary)

Task	Who
See the Team page	Administrators, and anyone given View on Team & Permissions (read-only)
Add, deactivate, change role, branch, permissions, make admin	Administrators only
Create, edit, delete branches	Administrators only
View the audit log	Administrators only
Change data-sharing consent	The Director only
Reset workspace	The Director only (farm workspace)

Data-sharing consent

What it is for: your farm's figures can help the Ministry of Agriculture, extension services and development partners understand what is happening in a district. Sharing is **your choice** and is **off** until you switch it on.

Where: Settings, card **Share with government & partners** (farm workspace), or the **Settings** tab (vendor workspace). It is not shown to government or partner accounts.

Before you start: only the **Director** can turn it on or off. Everyone else sees the switch greyed out; hover over it and it says "Only a director can change this". If someone else tries, the server answers **Permission denied: only a director can change data-sharing consent**.

Step by step

1. Open Settings and find **Share with government & partners**.
2. Press the round switch on the right (green = on, grey = off). A line below says **Sharing enabled.** or **Sharing disabled.**
3. When it is on, the card also says "Sharing since (date)".
4. Fill your **Province** (example Lusaka) and **District** (example Chongwe) and press **Save**. The **Save** button wakes up once you change a box. The message says **Location saved.**

What gets shared

The card says: when enabled, "this organisation's counts (enterprises, records, prices, reports) are included in de-identified district and national dashboards used by the Ministry of Agriculture, extension services and development partners. Your organisation's name is never shown. You also receive district advisories."

Who	What they see
Government (dashboard viewers, administrators)	Totals and averages for farms and cooperatives that opted in, per district or nationally. No farm names.
Extension officers	Farms that opted in and are in their district can be added to their caseload, so you need consent on **and** your province and district filled in.
Partners	Dashboards like government, and they can enrol farms that opted in into programmes.
Lenders	A lender never gets access through consent. A lender sees your **Credit Profile** only if you create a share link and send it to them (see Part 4). The profile does show whether you have given consent, which counts in your favour.

Some figures do not depend on consent: counts of how many organisations of each type exist, and the public marketplace listings that are already visible to everyone.

What switching it off does

When you switch sharing off, your counts are left out of dashboards from that moment on, and the "Sharing since" line disappears.

> **Watch out:** The province and district you enter place you on district dashboards and decide which extension officers can find you. If they are wrong, your numbers appear in the wrong place.

Household profile

Under the consent switch is a smaller section, **Household profile**. Programmes you join report results by sex, age and household size (for example "women-headed farms trained"). The director can press **Add profile** (or **Edit**) and fill in:

Field	Meaning
Head of household	Sex: Female, Male, Other / prefer not to say, or not recorded
Year of birth	Used to work out age and whether the head is a youth (35 or younger)
Household size	Number of people
Land (ha)	Land area in hectares
Female members, Male members	Counts
National ID (stored hashed)	Optional; kept only as a scrambled code so duplicates can be spotted
Household includes a person with a disability	Tick-box

Press **Save profile**. The message is **Household profile saved.** Only counts are ever shared. Until you fill it in the card says **Not recorded yet.**

Backup & Restore

What it is for: a safety copy of the information that is kept **only in this browser**. The page is titled **Data Backup & Restore**. It is available to every signed-in farm user.

> **Watch out:** this backup does **not** contain your Finance ledger, Sales, Inventory, production cycles and records, team or vendor data. Those live in your company account and are safe without a backup. Likewise, a restore does not bring back deleted company data. The page's own wording is: "Your Finance ledger, Sales, Inventory, production cycles and records are stored in your company account, not in this file."

What is saved in the backup file

Everything the farm workspace keeps in this browser only, for example: device dashboards (aquaculture ponds, water, poultry houses, energy, soil) and their alerts; Smart Devices, gateway and cold-chain settings; Animal Health records; Staff & Labour; Procurement and Requisitions; Processing recipes and batches; the Activity Log; Crop Rotation; Smart Vision, Sustainability and Financial AI records; the food, supply and service listings you post in the farm marketplaces; and the last-backup date. The page shows **Keys to back up** (how many separate items) and **Last backup** (date and time, or **Never**).

What is not saved

- Your sign-in pass.
- Anything already stored in the company account (see the table in "Where your data is kept").
- Items that exist only on another device: a backup holds what *this* browser holds.

> **Note:** The description box at the bottom of the page lists enterprises, production cycles, inventory and finance records as "included". Those are a leftover from an older version. Today they are in the company account, and a restore will not override the company copy.

Making a backup

1. Open **Backup & Restore** (bottom of the sidebar).
2. Press **Download Backup**.
3. Your browser saves a file whose name starts with "agronexus_backup" and ends with today's date, for example the 18th of October 2026. Keep it somewhere safe, for example on a flash disk or in your email.
4. **Last backup** now shows the time.

Make a backup after each big session of data entry in the browser-only pages, and before you clear your browser, change computers or use a new phone.

Restoring from a backup

1. Press **Choose file** under **Select backup file** and choose a backup file (it must end in .json). The file name and size appear.
2. Read the warning: **Restoring will OVERWRITE current data. This cannot be undone.**
3. Press **Restore Data**.
4. A green message says **Successfully restored N keys. Reloading page…** and the page reloads by itself.

If the file is not a proper backup you see a red message: either the technical message from the browser, or *Failed to parse backup file. Make sure it is a valid AgroNexus JSON backup.* The **Restore Data** button is grey until you have chosen a file.

> **Tip:** To move browser-only data from an old computer to a new one: make a backup on the old one, sign in on the new one, restore, and check each page.

> **Watch out:** A restore replaces the matching items in *this* browser with what is in the file. If you have entered newer data since the backup, it is lost.

Notifications and your account menu

The bell

In the farm workspace the **bell** at the top right shows a red number when you have unresolved alerts from your devices (up to **9+**). Pressing it opens the **Notifications** page. The same page is in the sidebar under Farm Management, with the red number beside it.

The **Notifications Centre** page ("Aggregated alerts from all IoT modules") gathers alerts from Aquaculture, Water, Poultry, Energy, Soil and Devices into one list.

Control	What it does
Refresh	Reloads the alerts
Clear Resolved	Removes resolved alerts (appears when there are some)
Critical, Warning, Info, Resolved today	Counters; press one to filter the list
Severity buttons	all, critical, warning, info
Module drop-down	All modules, Aquaculture, Water, Poultry, Energy, Soil, Devices
Status drop-down	All statuses, Unresolved, Resolved

Each alert has a **Resolve** action. An empty list shows **All clear — no active alerts**.

> **Note:** these alerts are kept in this browser only. They are not sent to your phone as messages, and a colleague on another computer sees their own list. See Part 5 for how alerts are created.

There is no bell in the vendor, government, extension or partner workspaces, and no bell for individual customers.

Your profile and account menu

There is **no account menu** in the farm or vendor workspaces. The round badge at the top right of the farm workspace shows the first letter of your business name and does nothing when pressed. Your own name and phone are shown on the team page, and you can see your login on the **Profile** page only if you are an individual customer.

There is currently no screen to change your name, phone, photo or password. Ask an administrator or AGRINUXES support if something is wrong.

Plans, subscription and billing

Plans (Starter, Professional, Enterprise), a free-trial counter and an upgrade window were designed, but they are **not connected to the screens you use today**. You will not see a plan page, a trial counter or a payment screen, and no module is locked for lack of payment. If this changes, an announcement will explain it.

Where your data is kept

Some things you type are saved to your **company account**: every person in the company sees them, on every phone or computer, and they survive if you lose your device. Other things are kept **in this browser only**: only that one browser on that one device sees them, and they can be lost if the browser's data is cleared. Use **Backup & Restore** for the second kind.

Area	Where it is saved	What that means for you
Account, team, roles, permissions, branches, audit log	Company account	Shared, safe
Business profile, enterprises, production cycles, stages, daily records, events, care-guide ticks	Company account (the farm workspace)	Shared across the team and devices
Saved templates ("My templates")	Company account	Shared
Edit-approval settings and pending requests	Company account	Shared
Finance (income and expense ledger)	Company account	Shared
Sales (customers, orders, payments)	Company account	Shared
Inventory (stock items and every movement)	Company account	Shared
Credit Profile and lender report	Company account	Shared
Trade & Export (contracts, buyers, export documents)	Company account	Shared
Weather (stations, fields, satellite readings)	Company account	Shared
Everything inside vendor workspaces	Company account	Shared
Data-sharing consent, province, district, household profile	Company account	Shared
Programme enrolment, extension visits, government and partner data	Company account	Shared
Animal Health	This browser only	Back up with Backup & Restore
Staff & Labour	This browser only	Back up
Procurement, Requisitions	This browser only	Back up
Processing recipes and batches	This browser only	Back up
Activity Log, Crop Rotation	This browser only	Back up
Device pages (Water, Aquaculture, Poultry Houses, Energy, Soil Depth, Automation, Cold Chain, Device Gateway, Farm Gateway, Smart Devices) and their alerts	This browser only	Back up
Smart Vision, Sustainability, Financial AI notes	This browser only	Back up
Notifications and the bell count	This browser only	They come from the device pages
Farm-side marketplace listings you post (AgriFood Market, AgriSupply, AgriServices)	This browser only	Back up
Bookings and saved items on the Agro Dealers, Equipment Hire and Vet Services directories	This browser only (the directory itself may load from the platform)	Back up
Backup history ("Last backup")	This browser only	
Saved items on the individual customer page	Not saved at all	Lost on reload

> **Tip:** If a colleague says "I can't see what you entered", ask which page it was. If it is in the browser-only list, the data really is on your device only. Until those pages are moved to the company account, enter such data on one agreed computer and make regular backups.

> **Note:** Automatic entries created by production (for example a purchase that posts a cost to Finance, or a harvest that adds stock) wait in a small queue in the browser for a moment before they are delivered to the company account. If you were offline, they are delivered when you are next connected.

Part 2 — Templates, Record Fields and Care Guides

About this part

Templates are the heart of AGRINUXES for farmers and cooperatives. A template is a ready-made description of one kind of farming: how a broiler batch, a tilapia pond, a maize field or a dairy herd normally runs, what you should write down every day, and what you should feed, vaccinate, spray or check on which day.

This part explains, step by step:

- what a template is and what is inside it;
- how to choose templates when you set up and later when you add a new enterprise;
- how to start a cycle from a template;
- how the Daily Log gets its boxes from the template, and what every box means;
- how the Care Plan tab reminds you what to do each day;
- how to change the boxes and the care guide to match **your own way of farming**, and save the result as **your own template**;
- how to share and reuse your saved templates;
- how to load many days of records at once from a spreadsheet.

This part applies to **Farmer / Farm** and **Cooperative** accounts, which get the farm workspace. Other business types (agro dealers, vets, equipment hire, transport and so on) use vendor workspaces and are covered in Parts 6 and 7.

> **Note:** For how cycles, stages, events and outputs work once a cycle is running, see Part 3 — Running Production: Cycles, Stages, Events and Outputs. This part concentrates on the template side: choosing, understanding and customising.

Understanding templates

What a template is

What it is for. A template saves you from starting with a blank page. When you pick "Broiler Chicken" you do not have to invent the stages of a broiler batch, the measurements to take, or a vaccination calendar. The template already contains a sensible starting point, and you can then adjust it.

There are two kinds of template:

Kind	What it is	Marked as
Built-in	One of the 94 templates that come with AGRINUXES. Everyone has the same ones. You cannot change a built-in template itself.	**Built-in**
My template	A copy of a built-in template that your company has customised and saved. It carries your own daily boxes and your own care guide.	**My template** (with a version number, for example **My template · v2**)

Built-in templates are never altered. When you customise one and save it, AGRINUXES makes a copy and stores it with your company. Your copy remembers which built-in template it came from.

What a template contains

Every template holds the following pieces.

Piece	What it means for you	Where you see it
Name, icon and colour	How the template is shown, for example "Tomato" with a tomato icon.	Add Enterprise, New Cycle, cycle header
Stages	The steps a cycle goes through, each with a typical length in days. Example: Brooding (14 days), Grower (14 days), Finishing (14 days), Harvest / Sale (1 day) for broilers.	New Cycle (step 1 preview), **Stages** tab
Measurements	What should be measured at each stage, with units, how often (daily, weekly, per event) and a target or normal range where one exists.	**Stages** tab, under "Measurements to track"
Key activities	A checklist-style list of the jobs in each stage, such as "Place chicks" or "Manage brooder temperature".	**Stages** tab, under "Key activities"
Alerts	Short warning messages for the stage, marked as information, warning or critical. Example: "High mortality — check temperature, ventilation and disease."	**Stages** tab
Expected outputs	What the stage produces (for example live broilers) and where it can go: sale, inventory, processing, incubation, hatchery, transfer, waste or own use.	**Stages** tab, "Expected outputs"
Production KPIs	The key figures for this kind of farming with a benchmark, such as Feed Conversion Ratio, Mortality Rate or Average Body Weight.	**Overview** tab, "Production KPIs"
Daily record fields	The boxes on the Daily Log.	**Daily Log** tab
Care guide	The feeding, water, vaccination, medicine, spray, fertiliser, weighing, check and task reminders, each on a day counted from the start of the cycle.	**Care Plan** tab

The last two pieces, **daily record fields** and **care guide**, are the ones you can change and save as your own. Stages, measurements, activities, alerts, outputs and KPIs are fixed in the template (see "Limits" in the chapter "My templates").

> **Note:** The built-in daily fields are shared by all templates of the same category. For example, every aquaculture template (tilapia, catfish, shrimp and so on) starts with the same aquaculture daily boxes. The care guide, however, is different for each template.

Enterprise, template and cycle

People often mix these three words up. They are three different layers:

- A **template** is the recipe. It describes a kind of farming in general. Example: "Broiler Chicken".
- An **enterprise** is one operation on your farm that follows a template. You name it and give it a location. Example: "Sunrise Broilers, House A".
- A **cycle** (also called a batch, season or production run) is one run of that enterprise from start to finish, with a start date. Example: "Broiler Oct 2026".

In words, the picture looks like this:

1. Your **company** (the farm business account) owns many **enterprises**.
2. Each **enterprise** points to exactly one **template** (built-in, or one of your saved versions of it).
3. Each **enterprise** can have many **cycles**, one after another or several at the same time.
4. Each **cycle** has its own **stages**, **daily records**, **events**, **care ticks** and **outputs**.

For example:

> **Example:** Mwansa farms near Chongwe. The company has two enterprises. "Chongwe Broilers" follows the Broiler Chicken template. "Maize Block A" follows the Maize (Field Crop) template. Chongwe Broilers has three cycles so far: "Broiler Jun 2026" (completed), "Broiler Aug 2026" (completed) and "Broiler Oct 2026" (active). The Daily Log of "Broiler Oct 2026" uses the broiler boxes; the Care Plan counts days from the start date of that cycle only.

Two consequences are worth remembering:

- Changing the template that an enterprise uses changes the Daily Log boxes and the Care Plan for **all** cycles of that enterprise, including running ones. Records you already saved stay saved.
- The stages of a cycle are copied from the template **when the cycle is created**. They do not change afterwards.

The 14 template categories

The 94 built-in templates are grouped into 14 categories. Each category has its own set of daily boxes.

Category	Templates	Examples
Poultry & Birds	12	Broiler Chicken, Layer Chicken, Indigenous / Village Chicken, Turkey, Quail, Ostrich
Livestock	9	Dairy Cattle, Beef Cattle, Pig Production, Meat Goat, Rabbit
Aquaculture	6	Tilapia (Pond), Catfish (Tank / Pond), Aquaponics System
Crops & Grains	15	Maize (Field Crop), Soybean, Groundnut, Cassava, Sugarcane
Horticulture	12	Tomato, Onion, Cabbage, Kale & Spinach, Carrot, Garlic
Greenhouse	5	Cut Flower Rose, Hydroponic Lettuce & Microgreens, Strawberry (Greenhouse)
Orchards & Tree Fruit	9	Mango Orchard, Avocado Orchard, Banana, Macadamia
Apiary & Beekeeping	2	Honey Bee (Langstroth Hive), Honey Bee (Top-Bar / Kenya Hive)
Mushroom Cultivation	2	Oyster Mushroom, Button Mushroom
Insects & Worms	7	Black Soldier Fly (BSF), Cricket Farming, Vermiculture (Earthworms), Stingless Bee
Aquatic Plants & Algae	2	Seaweed Farming, Spirulina / Microalgae
Forestry & Agroforestry	2	Timber Forestry, Agroforestry / Silvopastoral
Agro-Processing	6	Maize Milling, Dairy Processing, On-Farm Feed Mill
Agricultural Services	5	Veterinary Clinic / Mobile Vet Services, Agricultural Equipment Hire, Farmer Training & Extension Services

The full list of all 94 templates is in the template catalogue at the end of this manual.

Notes on the table:

- **Every one of the 94 templates comes with a starter care guide.** The number of items ranges from about 5 to 23 per template.
- The Stingless Bee template sits under **Insects & Worms**, not under Apiary.
- Irish Potato, Sweet Potato and Cassava are under **Crops & Grains**; Tomato, Onion and Carrot are under **Horticulture**; Banana, Pawpaw and Moringa are under **Orchards & Tree Fruit**.

Choosing templates

At set-up (onboarding)

What it is for. When you first create a Farmer / Farm or Cooperative account, the set-up wizard asks what your farm operates and creates one enterprise for each operation you choose. Other business types skip this step and choose the products or services they offer instead (see Part 1 — Getting Started and Your Account).

Before you start. You have chosen **Farmer / Farm** or **Cooperative** as your business type and entered your business name, country and currency.

Step by step

1. In the set-up wizard, reach step 4 of 5, called **Setup**. The heading reads **What does your farm operate?**
2. Click one or more category cards. Each card shows an icon, the category name and a short description. A tick appears on the cards you select. You can select as many as you like.
3. Under every selected category a box appears listing its templates. Each template row shows its icon, name and a one-line description.
4. Click a template row to add an enterprise from it. The enterprise appears in the green **Added enterprises** box, named after the template with " 1" at the end, for example "Broiler Chicken 1".
5. Click the same template again to add a second enterprise of the same kind (it will also be named with " 1" at the end, so rename it).
6. In the **Added enterprises** box, click the name of an enterprise and type a better name, such as "Chongwe Broilers". Click the small ✕ to remove an enterprise you added by mistake.
7. When you have at least one enterprise, click **Finish setup**.
8. On the final screen, **You're all set!**, check the list of your enterprises and click **Open my workspace**.

What you will see

Message or control	Meaning
Select at least one category to continue.	You have not ticked any category card yet.
Add at least one enterprise above to continue.	You ticked categories but have not clicked any template row. **Finish setup** stays greyed out.
Added enterprises (n)	The list of enterprises that will be created when you finish.

Good to know

- The set-up wizard shows all 14 categories.
- There is no search box at set-up. Use the category cards.
- The enterprise gets one of eight colours automatically.
- You cannot enter a location at set-up. You can add enterprises later with a location (next section).
- At set-up you only see built-in templates, because your company has not saved any of its own yet.
- Nothing is lost if you pick the wrong template: add the right one later and stop using the other one.

If something goes wrong. If **Finish setup** is greyed out, you have not added any enterprise. Click a template row under a selected category.

Later: Add Enterprise (Settings)

What it is for. You can add a new enterprise at any time, for example when you start fish farming next to your maize. This is also the place where your own saved templates appear.

Before you start. You need access to **Settings** in the left menu (owners and directors have it; other team members depend on the permissions given in Team & Permissions).

Step by step

1. In the left menu, click **Settings**. The page is titled **Platform Settings**.
2. Find the **Enterprises (n)** box and click **Add Enterprise** (top right of the box).
3. In the **Add Enterprise** window, type an **Enterprise Name** (required), for example "Mpongwe Fish Ponds".
4. Under **Production Template**, narrow the list. You can click a category tab, type in the search box, or both. The category tabs are **All**, **Poultry & Birds**, **Livestock**, **Aquaculture**, **Crops**, **Horticulture**, **Greenhouse**, **Orchard**, **Apiary**, **Mushroom**, **Processing** and **Services**.
5. Click a template tile to select it. A green tick appears on it. The bottom of the window shows its name and category.
6. Optionally type a **Location (optional)** such as "Plot 5, Kabwe Road", and **Notes (optional)**.
7. Click **Add Enterprise** at the bottom right. The button changes to **Saved!** and the window closes by itself.

What you will see

- Your company's own saved templates are listed **first**, each tile marked with a small green **My template** label. The built-in templates follow.
- The search box matches the template name or the species (for example typing "tilapia" or "chicken").
- When nothing matches, the grid says **No templates match your search**.
- The bottom bar says **No template selected** until you click a tile.
- **Add Enterprise** stays greyed out until both a name and a template are chosen.

What is created. Only the enterprise: its name, the template it follows, a colour taken from the template, an "active" marker, and the location and notes if you typed them. **No cycle is created.** The new enterprise appears in the **Enterprises** list in Settings and can now be chosen when you start a new cycle in **Production**.

Good to know

- The category tabs in this window do not include Insects & Worms, Aquatic Plants & Algae or Forestry & Agroforestry. Those templates still appear under **All** and when you search, for example "cricket", "seaweed" or "timber".
- An enterprise follows one template. To grow a different crop or animal, add a different enterprise.
- You can add as many enterprises from the same template as you like, for example three broiler houses.

> **Tip:** Name enterprises after the place or purpose ("Chongwe Broilers", "Block A Maize"), not after the template. The template name is always shown underneath anyway.

Cycle types

What a cycle type is

What it is for. Within one category there are different ways of running the same kind of enterprise. A poultry enterprise might be a 42-day broiler batch, a flock of layers you buy as day-old chicks, or an egg-hatching run in an incubator. Each of these needs different information. When you start a cycle you choose the **cycle type** (the wizard asks **What type of cycle?**). The choice does three things:

1. It suggests how long the cycle will last, which fills in **Expected End** for you.
2. It decides which **setup questions** appear in step 2 of the wizard.
3. It decides which **daily boxes** and which **care guide items** are shown, where the template defines variants (this matters most for poultry; see below).

Cycle types for every category

The wizard lists the types below. The number is the usual length in days that the wizard suggests.

Category	Cycle types (suggested days)
Poultry & Birds	**Broiler Grow-Out** (42), **Layer — from Day-Old** (500), **Layer — from Point-of-Lay** (380), **Layer — Continuing Flock** (90), **Egg Incubation & Hatch** (22), **Breeder Flock** (365), **Turkey Grow-Out** (120), **Duck Cycle** (60), **Quail Cycle** (90)
Livestock	**Dairy Production Season** (305), **Beef Grow-Out** (180), **Pig Grow-Out** (120), **Sow Farrowing Cycle** (90), **Goat Production Season** (180), **Sheep Season** (120), **Rabbit Batch** (80)
Aquaculture	**Pond Grow-Out** (180), **Cage Culture** (150), **Tank / RAS System** (120), **Shrimp Pond Cycle** (100), **Aquaponics Cycle** (120), **Hatchery / Nursery Cycle** (45)
Crops & Grains	**Rain-Fed Season** (120), **Irrigated Season** (90), **Nursery / Seedbed** (30), **Ratoon Crop** (180)
Horticulture	**Transplant Cycle** (90), **Direct-Sown Crop** (75), **Perennial Season** (120)
Greenhouse	**Hydroponic Cycle** (35), **Greenhouse Tomato** (180), **Cut Flower Production** (90), **Strawberry Cycle** (75)
Orchards & Tree Fruit	**Annual Production Season** (365), **New Orchard Planting** (180), **Harvest Window** (45)
Apiary & Beekeeping	**Honey Production Season** (120), **Colony Build-Up** (60), **Queen Rearing Cycle** (30)
Mushroom Cultivation	**Spawn Block Cycle** (60), **Bag Spawn Cycle** (45)
Agro-Processing	**Processing Batch** (7), **Monthly Operation** (30)
Agricultural Services	**Service Contract** (30), **Equipment Hire Period** (14)
Insects & Worms, **Aquatic Plants & Algae**, **Forestry & Agroforestry**	These three categories have no cycle types of their own. The wizard shows the four Crops types (**Rain-Fed Season**, **Irrigated Season**, **Nursery / Seedbed**, **Ratoon Crop**) and asks no setup questions.

Each type in the wizard also shows a one-line description. A few examples:

- **Broiler Grow-Out** — "Day-old chicks → live weight / slaughter. Typically 35–45 days."
- **Egg Incubation & Hatch** — "Set fertile eggs → candle → lock-down → hatch → chick grading."
- **Dairy Production Season** — "Track lactation, milk yield, breeding and dry-off for a dairy herd."
- **Transplant Cycle** — "Seedling transplant → harvest. For tomato, cabbage, kale, pepper."
- **Harvest Window** — "Focus on the active harvest period only."

> **Tip:** If the category has no exact match for your animal or crop, pick the nearest type. For example, for guinea fowl or geese choose **Duck Cycle** or **Broiler Grow-Out**; for a cattle-fattening group choose **Beef Grow-Out**. The type only affects the suggested length, the setup questions and (for poultry and orchards) which items show.

How the cycle type changes the daily boxes and care items

Category	Effect of the cycle type
Poultry & Birds	Strong effect. Egg boxes show only for laying types; incubator boxes show only for **Egg Incubation & Hatch**; litter condition shows only for **Broiler Grow-Out** and **Turkey Grow-Out**. Full table in the Daily Log chapter.
Orchards & Tree Fruit	The built-in orchard care guides are written separately for **Annual Production Season**, **New Orchard Planting** and **Harvest Window**. Only the items for the type you chose appear in the Care Plan.
Broiler Chicken and Layer Chicken templates	Their care guides are tied to the matching types: broiler items show for **Broiler Grow-Out**; layer items show for **Layer — from Day-Old** (rearing items) or **Layer — from Point-of-Lay** and **Layer — Continuing Flock** (laying items).
All other categories	The daily boxes are the same for every cycle type. The cycle type changes only the suggested length and the setup questions.

> **Watch out:** If you create a cycle of the wrong type for the template (for example a **Layer — from Day-Old** cycle under the Broiler Chicken template), the Care Plan will find no items that apply and will show an empty whole guide. Start a new cycle with the right type, or choose the right template.

If you have customised a template, you can also tie a box or care item to certain cycle types; the editor keeps any such restrictions that were in the built-in version and shows "Shown only for some cycle types of this enterprise" or "Applies only to some cycle types of this enterprise" under them. Items you add yourself apply to every cycle type.

The setup questions in step 2, per category

Step 2 of the New Cycle wizard asks questions that depend on the category (and, for poultry and livestock, on the cycle type). None of them is compulsory: the red star on some of them is only a reminder and the wizard lets you continue without answering. Answers are stored with the cycle as a note, and the main quantity creates the cycle's first **production unit** (for example the flock size).

Poultry & Birds

Question	Type	Shown for
Number of Birds (*)	number, birds	All types except Egg Incubation & Hatch
Eggs Set (*)	number, eggs	Egg Incubation & Hatch only
Breed / Strain	text, e.g. Ross 308, Lohmann Brown	All
House / Pen ID	text, e.g. House A, Pen 3	All
Chick / Egg Source	text, hatchery or farm name	All
Target Slaughter Age	number, days	Broiler Grow-Out, Turkey Grow-Out
Starting Age	number, weeks	Layer — from Point-of-Lay, Layer — Continuing Flock
Egg Routing Intent	choice: Table eggs → market; Fertile eggs → incubation (in-house); Fertile eggs → sale; Mixed (split between uses)	Layer types and Breeder Flock

Question	Type	Shown for
Setter / Incubator ID	text, e.g. Cabinet 1	Egg Incubation & Hatch
Expected Hatch Date	text, YYYY-MM-DD	Egg Incubation & Hatch
Housing System	choice: Deep litter, Cages (battery), Free range, Semi-intensive, Aviary	All

Livestock

Question	Type
Number of Animals (*)	number, head
Breed	text, e.g. Friesian, Boer
Average Age	number, months
Sex Breakdown	text, e.g. 10 cows, 1 bull (shown for Dairy Production Season and Goat Production Season only)
Primary Purpose	choice: Dairy, Beef / Meat, Breeding, Mixed
Pen / Paddock	text
Average Starting Weight	number, kg
Feeding System	choice: Zero-grazing (cut & carry), Grazing (pasture), Mixed grazing + supplement, Feedlot (total confinement)

Aquaculture

Question	Type
Number of Ponds / Tanks (*)	number
Pond Area per Unit	number, m²
Fingerlings Stocked (*)	number, fish
Stocking Density	number, fish/m²
Species / Strain	text, e.g. Nile Tilapia, African Catfish
Avg Fingerling Weight	number, g
Water Source	choice: Borehole, River / stream, Municipal, Rainwater harvested, Recirculating (RAS)
Primary Feed Type	choice: Commercial pellets, Farm-made feed, Natural (algae/plankton), Mixed
Target Harvest Weight	number, g

Crops & Grains

Question	Type
Field / Plot Name (*)	text, e.g. Plot A1, North Field
Area (*)	number, ha
Variety / Cultivar	text, e.g. SC403, DK8031
Irrigation System	choice: Rain-fed (no irrigation), Drip irrigation, Flood / furrow, Centre pivot, Sprinkler, Manual watering
Soil Type	choice: Sandy loam, Clay loam, Sandy, Clay, Silt loam, Not assessed
Expected Yield	number, bags/ha
Seed Rate	number, kg/ha

Horticulture

Question	Type
Field / Bed Name (*)	text
Area (*)	number, ha
Variety / Cultivar	text, e.g. Roma
Transplant / Sowing Date	text, YYYY-MM-DD
Plant Count	number
Irrigation	choice: Drip, Furrow, Sprinkler, Manual, Rain-fed
Expected Yield	number, kg/ha

Greenhouse

Question	Type
Greenhouse / Tunnel Name (*)	text
Growing Area (*)	number, m²
Growing System	choice: Soil (raised beds), Drip to soil, NFT Hydroponics, DWC Hydroponics, Coco coir / substrate, Aeroponics
Plant Count	number
Variety / Cultivar	text
Lighting	choice: Natural light only, Supplemental LED, Full artificial lighting
Climate Control	choice: None (passive), Shade nets, Evaporative cooling, Full HVAC

Orchards & Tree Fruit

Question	Type
Plot / Block Name (*)	text
Number of Trees (*)	number
Plot Area	number, ha
Tree Age	number, years
Variety / Cultivar	text, e.g. Tommy Atkins, Hass
Tree Spacing	text, e.g. 5m × 5m
Irrigation	choice: Rain-fed, Drip, Micro-jets, Flood / furrow
Expected Yield	number, tonnes

Apiary & Beekeeping

Question	Type
Number of Hives (*)	number
Hive Type	choice: Langstroth, Kenya Top Bar (KTBH), Top Bar (other), Warré, Log hive (traditional)
Apiary Location / Name	text
Average Colony Strength	choice: Weak (< 3 frames brood), Medium (3–5 frames), Strong (5+ frames)

Question	Type
Expected Honey Yield	number, kg/hive

Mushroom Cultivation

Question	Type
Number of Growing Blocks / Bags (*)	number
Substrate Type	choice: Sawdust (hardwood), Rice straw, Wheat straw, Coffee grounds, Cotton waste, Compost (button mushroom)
Growing Room / Shed	text
Target Yield	number, kg
Inoculation Date	text, YYYY-MM-DD

Agro-Processing

Question	Type
Raw Material Quantity (*)	number, kg
Raw Material (*)	text, e.g. Maize, Cassava, Milk
Expected Finished Output	number, kg
Line / Machine	text, e.g. Mill 1, Line B

Agricultural Services

Question	Type
Client / Customer Name (*)	text
Service Scope	text
Location	text, district or GPS
Contracted Value	number, ZMW

Insects & Worms, Aquatic Plants & Algae, Forestry & Agroforestry: no setup questions. Step 2 says "No additional setup required for this cycle type. Continue to step 3."

Starting a cycle: the New Cycle wizard

What it is for. A cycle is one run of an enterprise. The wizard creates the cycle, copies the template's stages into it, makes the first stage active and starts the day counting for the Care Plan.

Before you start. You need at least one active enterprise (see the previous chapter). You need access to **Production** in the left menu.

Step by step

1. In the left menu click **Production**. The left panel is titled **Production Engine** and shows how many cycles are open and closed.
2. Click **New Cycle** (green button, top right of the left panel). The window **New Production Cycle** opens. A progress bar and the words **Step 1 of 3** show where you are.

Step 1 of 3 — Enterprise and cycle type

1. Under **Which enterprise?** click the enterprise. Each row shows its icon, your name for it and the template name underneath. If you opened Production from an enterprise's own page, that enterprise is already chosen.
2. Under **What type of cycle?** click the type that fits (see the tables above). Each card shows its description and "~n days".
3. Look at **Stages from template**. It lists the stages the cycle will go through, joined by arrows. This is only a preview.
4. Click **Next →**. (It stays greyed out until an enterprise and a type are chosen. **Cancel** closes the window.)

Step 2 of 3 — Category-specific setup

1. The top of the step repeats the cycle type and enterprise name. Fill in the questions for your category (see the tables in the previous chapter). All of them are optional, even those marked with a red star.
2. Click **Next →**. Use **← Back** to go back.

Step 3 of 3 — Name, dates, notes

1. The green summary repeats the cycle type, enterprise and template, and shows up to six of your answers.
2. **Cycle Name *** is filled in for you, for example "Broiler Oct 2026" (template short name plus month and year). Change it to something you will recognise, such as "Broiler Batch 3 — House A".
3. **Start Date *** is today's date. Change it if the cycle really started on another day. **This date is day 0 of the Care Plan** (see the Care Plan chapter).
4. **Expected End (auto)** is the start date plus the suggested days for the cycle type. You can change it.
5. Optionally type **Notes**, for example the supplier and the delivery condition.
6. Click **Start Cycle**.

What is created

- A cycle with status **active**.
- One stage for every stage in the template. The first stage is **active** and the rest are waiting.
- The cycle's **production unit** (for example "Flock — Broiler Grow-Out, 500 birds"), if you entered the main quantity in step 2. For services, one unit for the client is always created.
- Notes that combine what you typed with a line "Config: …" listing your step 2 answers and a line "Cycle type: …".

Good to know

- The cycle takes its stages from the template at the moment you click **Start Cycle**. Later changes to the template do not change the stages of cycles that already exist.
- The **Expected End** is recalculated whenever you change the cycle type or the start date, so set those first and edit **Expected End** last.
- If you pick another enterprise in step 1, the cycle type, name and answers are reset to match that enterprise.
- A start date in the past makes the Care Plan treat items from the first days as overdue (it looks back up to 30 days). A start date in the future shows "Cycle starts in n days" on the Care Plan.

If something goes wrong

What you see	Meaning and fix
Next → is greyed out in step 1	No enterprise is selected, or you have no enterprises. Add one under Settings → Enterprises → **Add Enterprise**.
Start Cycle is greyed out	The **Cycle Name** or **Start Date** is empty.
The enterprise list is empty	Only active enterprises are shown. Add an enterprise first.

> **Tip:** Start the cycle on the day the first stage really begins (the day chicks arrive, the day you stock fish, the day you start land preparation). The built-in care guides count their days from the first stage. For the tomato guide, for example, day 0 is sowing in the nursery and day 28 is transplanting.

The Daily Log

How the Daily Log gets its boxes

What it is for. The **Daily Log** tab is where you write down what happened today: feed given, eggs collected, water readings, harvest weight, medicine used. The boxes on this form come from the template of the enterprise, narrowed down by the cycle type. If you have saved your own template, your boxes are used instead.

Before you start. You have a cycle that is **active** (see "Starting a cycle"). Finished cycles show their records but accept no new ones.

Step by step: record one day

1. Click **Production** in the left menu, then click the cycle in the list on the left.
2. Click the **Daily Log** tab.
3. Under **Stage**, check the stage. It starts on the current stage. The list shows the stages that have started or finished. Choose a different one if you are catching up on an earlier stage.
4. Under **Date**, check the date. It starts on today. Change it to enter a record for another day.
5. Fill in the **Key Measurements** first (the boxes marked with a red star).
6. Fill in the other boxes you have information for: **Status & Condition** (lists), **Additional Measurements** (numbers) and **Activity Log** (text). You do not have to fill every box.
7. Type any extra remarks in **Notes / Observations**.
8. Click **Save Daily Record**. The button turns green and reads **Record saved!** for a moment, and the form empties, ready for the next entry.
9. Your new record appears at the top of **Recent Records** at the bottom of the tab.

What you will see on the tab

Part of the form	What it contains
A line under the tab name	**Using the built-in record fields**, or **Using your template** followed by your template's name. A **Customise fields** link sits at the right (see "Customising").
Stage and **Date**	Which stage and which day this record belongs to.
Key Measurements *	The boxes marked **Required** in the template. They are shown first.
Auto-Calculated	Appears only after you have typed the numbers it depends on. Shows values worked out for you, such as total milk.

Part of the form	What it contains
Status & Condition	Boxes where you pick one answer from a list.
Additional Measurements	The other number boxes.
Activity Log	Free-text boxes (what was given, what was sprayed). The hint, if any, is shown beside the label and as grey text inside the box.
Notes / Observations	One free-text box for the whole day.
Save Daily Record, **Import CSV**, **Template**	Save one day, or load many days from a spreadsheet (see the CSV chapter).
Recent Records	The seven most recent records of the chosen stage.

> **Note:** If the enterprise of a cycle has been removed from your workspace, the Daily Log shows **Enterprise no longer found** and cannot show the boxes. Old records are kept and the five most recent are listed.

The four kinds of box

Kind	What you do	Example
Number	Type a figure. Decimals are allowed. A unit is shown next to the box (kg, L, %, °C and so on). The figure is saved as a number and can be added up and compared.	Feed Consumed: 18 kg
Choice from a list	Pick one answer from the list (or leave it on **— select —**).	Type of Feed: Starter
Free text	Type words.	Vaccine / Medicine Given: Newcastle La Sota, eye drop
Calculated automatically	You cannot type here. The box fills itself from other boxes.	Total Milk Yield

Required boxes. A red star after a label means the template marks the box as required. In the Daily Log the star is a reminder only: the form still saves if the box is empty. (The CSV import is stricter. See the CSV chapter.)

> **Watch out:** AGRINUXES saves whatever you have typed, even an empty form. Check the day's numbers before you click **Save Daily Record**.

> **Watch out:** Required boxes are always shown in the **Key Measurements** panel as number boxes. Mark only number fields as required when you customise a template.

Normal ranges and the colour cues

Many number boxes have a **normal minimum**, a **normal maximum** and sometimes a **target**. Examples: water temperature for fish 25 to 32 °C with a target of 28 °C; house temperature for poultry 18 to 32 °C.

What you see	What it means
A small grey "· target 28" after the label	The template's target value. It is for guidance only and never turns the box red.
A **green border** on the box	You typed a value inside the normal range.
A **red border**, a pink background and a message "**Below min (25)**" or "**Above max (32)**"	The value is outside the normal range. The record **still saves**. Check your reading, and act if it is real.
In **Recent Records**, a number tile with a pink background and red figure	A saved value that is outside the normal range.
No colour at all	The box has no normal range (for example Feed Consumed) or is empty.

> **Tip:** A red box is a prompt to check, not an error. A fish pond at 4 mg/L dissolved oxygen is a real warning. A 33 °C reading in a hot brooder house may be perfectly normal for your farm. Use **Customise fields** to set ranges that suit your site.

Auto-calculated boxes

Two built-in boxes are worked out for you:

Box	Where	How it is worked out	What it needs
Total Milk Yield (L)	Livestock	Morning Milk + Afternoon Milk + Evening Milk, to one decimal place	All three milk boxes must contain a figure. Type 0 for a milking you did not do.
Processing Yield (%)	Processing	Finished Output ÷ Raw Input Received × 100, to one decimal place	Both **Raw Input Received** and **Finished Output** must be filled.

The result is shown in a green **Auto-Calculated** panel above the lists, and is saved with the record. If you delete one of the source boxes while customising, the calculated box can no longer work.

Saving, history, editing and deleting

Recent Records. Each saved record is shown as a card. The card shows:

- the date (for example "Mon 6 Oct");
- the count of fields filled in;
- a **pencil** button (edit) and a **bin** button (delete);
- one small tile for each number, with its unit (red if out of range);
- grey chips for each choice or text answer;
- your note, if you typed one.

Only the seven newest records of the chosen stage are shown. Choose another stage in the **Stage** list to see that stage's records.

Edit a record

1. On the record card click the **pencil** button. The window **Edit Record — (date)** opens.
2. Change the numbers or the **Notes**. The numbers are listed with their short names (for example "feed kg").
3. If your company requires a reason, type it in **Reason for edit**.
4. Click **Save Changes**.

> **Note:** The edit window can change only the numbers and the notes. It cannot change the date, the stage, or the choice and text answers. To change those, delete the record and enter it again.

Delete a record

1. Click the **bin** button on the record.
2. In **Delete Record?** read "Remove record for (date)?" and click **Delete**.

The approval workflow (if your company turned it on)

An owner can switch on **Require approval for edits** in **Settings → Edit & Approval Control**. When it is on:

- Editing a record changes the button to **Submit for Approval**, and a note says "This edit will be sent for approval before applying."
- Deleting a record changes the button to **Submit Deletion**.
- If **Require a reason for every edit or deletion** is ticked, you must type a reason before the edit button works.
- The request then waits in **Settings → Edit & Approval Control → Pending Edits**, where the approver sees the before and after values and the reason, and clicks **Approve** or **Reject**. Rejecting lets the approver type a reason. Decisions are listed under **Recent Decisions**.
- The record changes only after approval.

Approval applies to **editing and deleting** records. Adding a new daily record, importing a CSV file, ticking Care Plan items and saving templates do not need approval.

Daily boxes for every category

Below, each category's built-in boxes are explained in plain words. "Required" means the red-star boxes in **Key Measurements**. A range such as "25 to 32" is the normal range that turns the box red when you go outside it.

Poultry & Birds

Poultry has the most boxes (23), because layers, broilers, hatcheries and breeders need very different records. The cycle type decides which boxes show.

Cycle type	Boxes shown
Broiler Grow-Out	Feed, Type of Feed, Water Additive, Vaccine / Medicine Given, Water Consumed, Mortality Count, Mortality Reason, Avg Body Weight Sample, Litter Condition, House Temperature, Live Bird Count
Layer — from Day-Old	Eggs Collected, Cracked / Broken, Trays Collected, then the general set (feed, water, medicine, mortality, house temperature, live bird count) plus Avg Body Weight Sample
Layer — from Point-of-Lay, **Layer — Continuing Flock**	The three egg boxes plus the general set (no body weight, no litter)
Breeder Flock	The three egg boxes, **Eggs Set for Incubation**, plus the general set
Egg Incubation & Hatch	Only incubator boxes: Setter Temperature, Setter Humidity, Hatcher Temperature, Hatcher Humidity, Turner / Auto-Turn, Candle Rejects Removed, Chicks Hatched, Chicks Culled / Weak
Turkey Grow-Out	The general set plus Avg Body Weight Sample and Litter Condition
Duck Cycle, **Quail Cycle**	Eggs Collected, Cracked / Broken, plus the general set and Avg Body Weight Sample

> **Note:** For the layer-from-day-old type, the egg boxes are present but chicks do not lay for the first months. Leave them empty until laying begins. The star on **Eggs Collected** is only a reminder.

What each poultry box means:

Box	Kind and unit	What to enter
Eggs Collected (required)	number, eggs	Total eggs picked up today.
Cracked / Broken	number, eggs	Eggs that cannot be sold as good eggs.
Trays Collected	number, trays	Trays of eggs (hint: 30 eggs per tray).
Eggs Set for Incubation	number, eggs	Fertile eggs put in the setter today (breeder flocks).

Box	Kind and unit	What to enter
Setter Temperature (required)	number, °C	The setter (the incubator for the first 18 days). Normal 37.2 to 37.8, target 37.5.
Setter Humidity (required)	number, %RH	Humidity inside the setter. Normal 55 to 65, target 60.
Hatcher Temperature	number, °C	The hatcher (where eggs go for the last days). Normal 36.9 to 37.2, target 37.0.
Hatcher Humidity	number, %RH	Normal 70 to 80, target 75.
Turner / Auto-Turn	list	Running OK, Manual turn done, or Off — check immediately.
Candle Rejects Removed	number, eggs	Candling means shining a light through the egg. Remove infertile or dead eggs and record how many.
Chicks Hatched	number, chicks	Chicks that hatched.
Chicks Culled / Weak	number, chicks	Chicks removed as weak or deformed.
Feed Consumed (required)	number, kg	Total feed given to the flock today. Over a cycle this is used with the weight gained to judge **FCR** (feed conversion ratio: kilograms of feed needed to make one kilogram of bird; lower is better; the broiler template benchmark is 1.7).
Type of Feed	list	Starter, Grower, Finisher, Layer mash, Breeder feed, Own mix, Other.
Water Additive	text	Vitamins, electrolytes (salts that help birds in heat), acidifier or medicine put in the drinking water.
Vaccine / Medicine Given	text	Name, route and dose, for example "Newcastle Lasota, eye drop".
Water Consumed	number, L	Total water drunk. Birds drink roughly twice the weight of feed they eat.
Mortality Count	number, birds	Number of birds that died today. **Mortality rate** is deaths as a percentage of birds started; the broiler benchmark is 3%.
Mortality Reason	list	Unknown, Disease, Injury, Predator, Heat stress, Cold stress, Culled, Other.
Avg Body Weight Sample	number, g	Weigh 10 to 20 birds and enter the average (hint on screen).
Litter Condition	list	Dry & crumbly (excellent), Slightly damp (acceptable), Wet / caked (action needed), Very wet (critical).
House Temperature	number, °C	Normal 18 to 32.
Live Bird Count	number, birds	Current total after subtracting deaths.

Livestock

The same boxes show for every livestock cycle type.

Box	Kind and unit	What to enter
Morning Milk (required)	number, L	Milk from the morning milking.
Afternoon Milk	number, L	Milk from the afternoon milking.
Evening Milk	number, L	Milk from the evening milking.
Total Milk Yield	calculated, L	Sum of the three milkings (all three must be filled).
Animals Milked	number, head	How many animals were milked. Divide total milk by this to see litres per cow.
Concentrate Feed	number, kg	Dairy meal or other bought feed.
Fodder / Roughage	number, kg	Hay, silage, cut grass.
Water Consumed	number, L	Total water.

Box	Kind and unit	What to enter
Type of Feed	list	Pasture / grazing, Hay, Silage, Crop residue, Dairy meal, Grower ration, Finisher ration, Mineral lick, Own mix, Other.
Vaccine / Medicine / Dip	text	Product, dose and animals treated, for example "FMD vaccine, 12 head".
Deaths / Culls	number, head	Animals that died or were culled.
Births / Calvings	number, head	New births.
Health Status	list	All healthy, Monitor 1–2 animals, Sick animal(s) — see notes, Emergency — vet called.
Avg Body Weight Sample	number, kg	Weigh 3 to 5 animals and average.

> **Note:** The milk boxes make most sense for dairy cycles. For a beef, pig or goat meat enterprise leave them empty, or remove them when you customise the template.

Aquaculture (fish, prawns, aquaponics)

Box	Kind and unit	What to enter
Feed Given (required)	number, kg	Total feed thrown in today.
Water Temperature (required)	number, °C	Normal 25 to 32, target 28.
Dissolved Oxygen (required)	number, mg/L	The oxygen fish breathe. Normal 5 to 10, target 7. Low readings, especially before sunrise, are dangerous.
pH Level	number, pH	How acid or alkaline the water is. Normal 6.5 to 8.5, target 7.5.
Ammonia (NH_3)	number, mg/L	A poisonous waste from fish. Maximum 0.02.
Turbidity / Secchi	number, cm	How murky the water is. The Secchi reading is the depth at which a white disc disappears; a green pond is typically 25 to 40 cm according to the starter tilapia guide.
Type of Feed	list	Fingerling starter, Grower pellet, Finisher pellet, Own mix, Natural (pond fertiliser), Other.
Treatment / Pond Input	text	Lime, salt, fertiliser or medicine, with product and amount.
Mortality Count	number, fish	Dead fish removed.
Water Change	number, %	Share of the water replaced.
Avg Weight Sample	number, g	Weigh 10 to 20 fish from one pond or tank.
Feeding Response	list	Vigorous — all food consumed; Good — consumed within 30min; Poor — leftover feed; Very poor — not feeding.

Crops & Grains

Box	Kind and unit	What to enter
Irrigation Applied	number, mm	Water applied. 1 mm over a hectare is 10,000 litres.
Fertilizer Applied	number, kg/ha	Fertiliser rate applied.
Pest Pressure	list	None observed, Low — monitor, Moderate — spray threshold, High — immediate action.
Disease Pressure	list	None observed, Low — monitor, Moderate — treat, High — severe.
Growth Stage	list	Germination, Seedling, Vegetative, Flowering, Grain fill, Maturity, Harvest ready.

Box	Kind and unit	What to enter
Harvest Collected	number, kg	Weight harvested today.
Spray Applied	text	Product name and rate.
Fertiliser Type	text	For example Compound D, urea, CAN, manure.
Weeding / Cultivation	list	No, Hand weeding, Herbicide, Cultivator.
Rainfall	number, mm	Rain gauge reading.

Horticulture (vegetables)

Box	Kind and unit	What to enter
Harvest Weight (required)	number, kg	Total weight picked today.
Units Harvested	number, units	Heads, bunches or pieces.
Grade A	number, kg	Top-quality produce, fit for the best market.
Grade B / Seconds	number, kg	Lower-quality produce.
Rejects / Waste	number, kg	Produce thrown away.
Irrigation Applied	number, mm	Water applied.
Spray Applied	text	Product, rate and target (fungicide / insecticide).
Fertiliser Applied	text	Type and amount, for example "CAN 50 kg".
Pest / Disease Flag	list	None, Aphids, Spider mite, Whitefly, Botrytis, Downy mildew, Other — see notes.
Plant Health	list	Excellent, Good, Fair — monitor, Concern — action needed.

Greenhouse

Box	Kind and unit	What to enter
Nutrient Solution EC (required)	number, mS/cm	**EC** means electrical conductivity. It tells you how strong the plant-food solution is: too low and plants starve, too high and roots burn. Normal 1.2 to 2.5, target 1.8.
Nutrient Solution pH (required)	number, pH	Acidity of the solution. Plants take up food best in a narrow band. Normal 5.5 to 6.5, target 6.0.
Air Temperature	number, °C	Normal 18 to 28.
Humidity	number, %	Normal 60 to 80.
Nutrient Top-Up	number, L	Litres of solution or water added to the tank.
Harvest Weight	number, kg	Weight harvested.
Plants Harvested	number, plants	Count harvested.
Plant Health	list	Excellent, Good, Yellowing — check nutrients, Wilting — check roots, Disease spotted.
Pest Observation	list	None, Aphids, Spider mite, Fungus gnats, Thrips, Other.

Orchards & Tree Fruit

Box	Kind and unit	What to enter
Irrigation Duration	number, hours	How long the system ran.
Irrigation Amount	number, mm	Water applied.
Spray Applied	text	Product, concentration and target.

Box	Kind and unit	What to enter
Pest / Disease Scouting	list	None detected, Low — continue monitoring, Moderate — schedule spray, High — immediate action.
Fruit Thinned	number, fruits	Hand-thinning count (removing small fruit so the rest grow bigger).
Harvest Collected	number, kg	Weight harvested.
Grade A Fruit	number, kg	Top-quality fruit.
Rejects / Drops	number, kg	Fallen or damaged fruit.
Tree Health Status	list	All healthy, Minor yellowing — monitor, Suspected disease — isolate, Confirmed disease — action.
Rainfall	number, mm	Rain gauge reading.

Apiary & Beekeeping

Box	Kind and unit	What to enter
Hives Inspected	number, hives	Hives opened today.
General Hive Status	list	All healthy & queenright; 1–2 hives weak — monitor; Queenless hive detected; Swarming activity; Disease signs (varroa/EFB/AFB). "Queenright" means the hive has a working queen.
Honey Super Weight	number, kg	Total weight of honey supers (the boxes where bees store honey).
Honey Harvested	number, kg	Honey taken today.
Varroa Mite Count	number, mites/100 bees	Varroa is a parasite of bees. Maximum 3 per 100 bees.
Treatment Applied	text	Product name and dose.
Syrup Fed	number, L	Sugar syrup fed to the bees.

Mushroom Cultivation

Box	Kind and unit	What to enter
Air Temperature	number, °C	Normal 16 to 24, target 20.
Humidity	number, %	Normal 80 to 95, target 90.
CO_2 Level	number, ppm	Carbon dioxide in the room. Maximum 1000. High CO_2 gives long stalks and small caps; open the vents.
Pinning Count	number, fruiting bodies	"Pins" are the tiny mushrooms just starting to form.
Harvest Weight	number, kg	Weight picked.
Substrate Moisture	list	Optimal (60–70%), Too dry — mist, Too wet — air out, Contamination visible.
Contamination	list	None, Slight — isolated, Moderate — quarantine block, Severe — dispose.
Misting Done	list	Yes, No, Partial.

Insects & Worms

Box	Kind and unit	What to enter
Feed / Substrate Added (required)	number, kg	Feed or waste added to the bins or beds.

Box	Kind and unit	What to enter
Type of Feed	list	Kitchen waste, Crop residue, Manure, Commercial feed, Bran / grain, Other.
Temperature	number, °C	Normal 24 to 32.
Humidity	number, %	Normal 60 to 80.
Substrate Moisture	list	Optimal, Too dry — mist, Too wet — add dry matter.
Harvest Weight	number, kg	Larvae, crickets, worms or compost harvested.
Mortality / Pests	list	None, Some die-off, Mites / flies present, Heavy loss — see notes.

Aquatic Plants & Algae

Box	Kind and unit	What to enter
Water Temperature (required)	number, °C	Culture or sea temperature.
pH Level	number, pH	Acidity of the culture water.
Salinity / EC	number, ppt / mS	How salty (or how conductive) the water is.
Nutrient / Fertiliser Added	text	Product and amount.
Culture Density	number, g/L	How thick the algae culture is.
Harvest Weight	number, kg	Weight harvested.
Culture Health	list	Excellent, Good, Fair — monitor, Contaminated / crashing.

Forestry & Agroforestry

Box	Kind and unit	What to enter
Activity Today	list	Planting, Weeding, Pruning / thinning, Fire-break maintenance, Pest scouting, Watering, Harvest / felling, Other.
Trees Planted	number, trees	Seedlings planted today.
Workers on Site	number, people	Headcount.
Survival Rate (sample)	number, %	Share of planted trees still alive in a sample.
Stand Health	list	All healthy, Minor pest / disease, Fire damage, Drought stress, Serious loss — see notes.
Rainfall	number, mm	Rain gauge reading.

Agro-Processing

Box	Kind and unit	What to enter
Raw Input Received (required)	number, kg	Raw material received or fed into the line.
Finished Output (required)	number, kg	Finished product.
Waste / Loss	number, kg	Material lost.
Processing Yield	calculated, %	Finished output ÷ raw input × 100.
Batches Processed	number, batches	Batches run today.
Downtime	number, hours	Hours the machine was stopped.
Quality Check Result	list	Pass — all within spec; Minor deviation — acceptable; Fail — hold batch; Critical failure — destroy.

Agricultural Services

Box	Kind and unit	What to enter
Clients Served	number, clients	Clients attended today.
Hours Worked	number, hours	Hours spent.
Revenue Collected	number, currency	Money collected today.
Pending Invoices	number, invoices	Invoices not yet paid.
Service Type	list	Consultation, Field visit, Training, Lab test, Advisory call, Other.

> **Note:** A template with no category-specific boxes would show two simple ones, **Activity Today** (text) and **Workers on Site** (number). All 14 built-in categories have their own boxes, so you will normally not see these two unless you add them yourself.

The Care Plan tab

What the Care Plan is for

What it is for. The Care Plan is a day-by-day reminder list for the cycle. It tells you what to feed, which vaccine is due, when to spray, when to weigh or check, and what the whole programme looks like. The list comes from the template's **care guide**. You tick items off as you do them, so the farm owner and the team can see what has been done and what has been missed.

Before you start. Open a cycle (**Production**, then click the cycle). Click the **Care Plan** tab. You can read the Care Plan on any cycle, but you can tick items off only while the cycle is **active**.

Every template has a starter guide

All 94 built-in templates come with a **starter guide**. The Care Plan marks it with an amber box:

> **Note:** This is a **starter guide** — typical practice, not a prescription. Review the products and doses with your vet or extension officer, then use **Set my standards** to adjust it to how you farm and save it as your template.

> **Watch out:** The starter guides are typical smallholder and commercial programmes offered as a guide only. Doses, products, vaccination ages, spray intervals and withdrawal periods vary by breed, region, disease pressure and product. **Always confirm every product and dose with your vet, agronomist, extension officer or the product label before you use it.** AGRINUXES does not replace professional advice.

The amber box disappears once you save your own version, because then the guide is yours and you have reviewed it.

Counting the days

Every item in the guide is placed on a **day number counted from the start of the cycle**. The start date you entered in the New Cycle wizard is **day 0**. The day after is day 1, and so on.

- The Care Plan always tells you where you are: "Today is **day 12** of this cycle."
- If the start date is still in the future, it says "Cycle starts in 3 days."
- The cycle header at the top of the page shows "Day n" as well.

> **Example:** You start a broiler cycle on Monday 6 October. Monday is day 0. The Newcastle + Infectious Bronchitis vaccination is on day 7, which is Monday 13 October. The Gumboro vaccination is on day 14, Monday 20 October.

The three kinds of care item

Each item in the guide takes one of three shapes. You choose the shape in the editor by filling in the "Starts on day", "Repeat every" and "Until day" boxes (see "Customising").

Kind	How it is set	What it does	Example from the starter guides
One-off	Only **Starts on day**	Appears once, on that day.	Broiler: "Gumboro (IBD)" on day 14. Maize: "First weeding" on day 35.
Repeating	**Starts on day**, **Repeat every** (days) and **Until day**	Appears on the start day, then again every so many days up to the end day. Each occurrence is ticked off separately.	Broiler: "Weigh a sample of 20 birds" starting day 7, every 7 days, until day 42. Tomato: "Preventive fungicide against early and late blight" from day 40, every 10 days, until day 125.
Phase	**Starts on day** and **Until day**, with no repeat	A programme that applies for a whole stretch of days. It cannot be ticked. It shows under "The programme right now" while today falls inside it.	Broiler: "Starter feed" days 0 to 13, "Grower feed" days 14 to 27, "Finisher feed" days 28 to 42.

> **Watch out:** A repeating item needs an **Until day**. If you set "Repeat every" but leave "Until day" empty, the item appears only once, on its start day.

The type of each item (colour tag)

Every item has a type, shown as a coloured tag. The type does not change how the item behaves. It helps you scan the list.

Type	Use it for
Feed	Feeding programmes and feed changes (starter, grower, finisher, dry-cow ration, minerals).
Water	Water quality and drinking-water programmes (vitamins and electrolytes, acidifier, irrigation).
Vaccination	Vaccines.
Medicine	Dewormers, coccidiosis prevention, dry-cow treatment, other treatments.
Spray	Fungicides, insecticides, herbicides, tick dips and sprays.
Fertiliser	Basal fertiliser, top-dressing, lime, manure, pond fertilising.
Weigh / sample	Weighing birds, animals or fish, body condition scoring.
Check	Inspections and scouting (brooder temperature, mastitis test, pest scouting, oxygen check).
Task	Any other job (land preparation, transplanting, moving to the laying house, harvest).

What an item shows

Each item shows:

- its **type tag** and its **title** (the "What");
- a grey line joining the **product**, the **dose** and the **how** (route or method) when they are filled in, for example "Broiler starter (crumbs) · Free access — about 15–60 g/bird/day";

- if a **withdrawal period** is set, an amber line: "Stop 7 days before harvest / slaughter / milk use — check the label."
- any **notes**;
- its day, for example "Day 14".

The sections of the tab

Section	What it shows
Template in use	The template name with a tag: **Built-in**, or **My template · v** and a number. If you have saved versions of this template, a drop-down lets you switch between **Built-in: …** and **Mine: …** versions. The button **Set my standards** (or **Edit my standards** if the template is already yours) opens the editor.
The programme right now	The phases that cover today (for example the current feed). Shown only when there is at least one.
Overdue (n)	Items from the last 30 days that were not ticked. Shown in red, newest first, with "n days late". At most 20 are listed, with "+ n older" under them when there are more.
Due today (n)	Items that fall on today's day number. If there are none, "Nothing scheduled for today."
Coming in the next 7 days (n)	Items due in the following 7 days, with "in n days".
Whole guide (n items)	Click to open a table of the complete guide for this cycle type: **When**, **Type**, **What**, **Product / dose**. Phases show as "Day 0–13", repeating items as "Every 7 days, day 7–42".

If the template has no care guide at all (for example after you removed every item), the tab says "No care guide for (name) yet" with a button **Build my care guide**.

Marking items done

Step by step

1. On the **Care Plan** tab find the item under **Overdue** or **Due today**, or under **Coming in the next 7 days** if you did it early.
2. Click **Done**. The title is crossed out, the row fades, and it says "done 6 Oct by (your name)".
3. If you ticked the wrong item, click **Undo** on that row.

Good to know

- **Done** and **Undo** appear only while the cycle is **active**. On a paused, planning or completed cycle you can read the plan but not change ticks.
- The tick is recorded with the date and the name on your profile, so the team can see who did what.
- Each occurrence of a repeating item is ticked on its own day. Ticking today's weighing does not tick next week's.
- Phase rows ("The programme right now") have no button, because they are programmes, not jobs.
- Ticks are saved with the cycle, which lives in the company account, so everyone in the company sees the same ticks.
- Ticking an item does **not** create a daily record, an event, a cost or a stock movement. If you vaccinate or treat and want the cost in Finance, also log it as an event in the **Events** tab (see Part 3).

The reminders at the top of the cycle

You do not have to open the Care Plan to notice that something is due:

- **Header banner.** While the cycle is active, if anything is due today or overdue, a banner appears under the progress bar: **Care guide:** "2 due today · 1 overdue" with **Open Care Plan** at the right. It turns red when something is overdue and light blue when things are only due today. Click it to jump to the Care Plan tab.
- **Tab badge.** The tab itself reads **Care Plan (3)**, where the number is today's unticked items plus all overdue items.

Which items apply to your cycle

Some starter guides contain items for particular cycle types (see "Cycle types"). A broiler guide shows only for **Broiler Grow-Out** cycles; the layer guide has one set of items for the rearing type and another for the two laying types; orchard guides have separate items for **Annual Production Season**, **New Orchard Planting** and **Harvest Window**. The tab counts and lists only the items that apply to the cycle type you chose. Items you add yourself apply to every cycle type.

Example: reading a broiler guide

The built-in Broiler Chicken starter guide (17 items) looks like this for a **Broiler Grow-Out** cycle:

When	Type	What	Product / dose
Day 0	Task	Brooder pre-heated and chicks placed	—
Day 0–6	Check	Brooder temperature 32–35 °C	—
Day 7–13	Check	Brooder temperature 29–32 °C	—
Day 14–20	Check	Brooder temperature 26–29 °C	—
Day 21–42	Check	Brooder temperature 23–26 °C, then ambient	—
Day 0–13	Feed	Starter feed	Broiler starter (crumbs) · Free access — about 15–60 g/bird/day
Day 14–27	Feed	Grower feed	Broiler grower (pellets) · Free access — about 65–145 g/bird/day
Day 28–42	Feed	Finisher feed	Broiler finisher (pellets) · Free access — about 150–220 g/bird/day
Day 0–4	Water	Vitamins and electrolytes against stress	Vitamin/electrolyte powder · As per label · Drinking water
Day 0–42	Water	Clean, cool drinking water at all times	About twice the weight of feed eaten; wash drinkers daily
Day 0	Vaccination	Confirm hatchery vaccinations (Marek's, Newcastle/IB)	—
Day 7	Vaccination	Newcastle + Infectious Bronchitis	e.g. Hitchner B1 + H120 · Eye drop or drinking water
Day 14	Vaccination	Gumboro (IBD)	IBD vaccine (intermediate) · Drinking water
Day 21	Vaccination	Newcastle booster	e.g. La Sota · Drinking water
Day 14–21	Medicine	Coccidiosis prevention	Anticoccidial (in feed or water) · As per label / vet
Every 7 days, day 7–42	Weigh / sample	Weigh a sample of 20 birds	—

When	Type	What	Product / dose
Day 41	Task	Remove feed 6–8 hours before catching	—

This table is the starting point for the worked examples in the next chapter. The examples show how the numbers and products can be changed to fit your own programme.

Customising a template: set your own standards

This chapter is the heart of the part. It shows how to turn a built-in template into **your** template: your boxes on the Daily Log, and your feeding, vaccination, spray and check calendar on the Care Plan.

Why customise?

The built-in templates are a good start, but every farm is different. You may use a certain feed brand, follow a vet's own vaccination calendar, spray on a rotation your agronomist gave you, feed your cows in different phases, or want to record something the template does not ask for. By customising you can:

- add, rename, reorder or remove daily boxes;
- set the normal minimum, maximum and target that turn a box red;
- change the days, products and doses in the care guide, and add or remove items;
- save the result under your own name so that you can use it again for the next cycle and for other enterprises.

Opening the editor

There are two doors to the same editor. The window is called **Set your standards — (enterprise name)**.

Door 1: from the Care Plan

1. Click **Production** and open the cycle.
2. Click the **Care Plan** tab.
3. In the **Template in use** box click **Set my standards** (it reads **Edit my standards** if the template is already yours). The editor opens on the **Care guide** tab.
4. If the template has no care guide, click **Build my care guide** instead.

Door 2: from the Daily Log

1. Click **Production** and open the cycle.
2. Click the **Daily Log** tab.
3. Click **Customise fields** at the top right, above the form. The editor opens on the **Daily record fields** tab.

Both doors show both tabs. You can switch between them with the two buttons at the top of the window.

> **Note:** The editor edits the template that this enterprise is using. Whatever you change is saved as a template; nothing changes in the built-in template or in other enterprises until you choose to use your saved template there.

The layout of the editor

Part	What it shows
Header	"Set your standards — (enterprise name)" and the line "Based on (built-in template name). Change what you record each day and your feeding, vaccination and spray guide, then save it as your own template."
Two tabs	**Daily record fields (n)** and **Care guide (n)**. The number in brackets is how many boxes or items are in the list right now.
Back to built-in defaults	A button at the right of the tabs (see below).
Body	The list of boxes or care items, one card each.
Footer	Red error line (if any), **Template name**, and the buttons.

Click the **X** at the top right, or **Cancel**, or click outside the window to leave without saving. Nothing is changed until you click a save button.

The Daily record fields tab

The tab starts with the explanation "These are the boxes on the Daily Log. Add anything you want to record — type of feed, water treatment, medicine given — and mark what is required."

Each box on the Daily Log is one card. The cards list all of the template's boxes, including boxes that are shown only for some cycle types (those cards carry the line "Shown only for some cycle types of this enterprise.").

Controls on every field card

Control	What it does
Name	The label shown on the Daily Log and in history. Required. Example: "Feed Brand".
Kind	**Number**, **Choice from a list** or **Free text**. For a box that is calculated automatically (such as Total Milk Yield) this shows "Calculated automatically" and cannot be changed.
Unit	For numbers only. Text such as kg, L, g, ml, °C. Shown beside the box.
Required	Tick to show the box in **Key Measurements** with a red star. It does not block saving on the Daily Log, but it does stop a CSV row that lacks it. Not offered for calculated boxes.
Options — one per line	For choice boxes only. Type one answer per line.
Normal minimum, **Normal maximum**, **Target**	For number boxes only. All optional. Below the minimum or above the maximum turns the Daily Log box red. The target is shown next to the label for guidance.
Hint shown under the box (optional)	A short help line. Not offered for calculated boxes.
Move up, **Move down**, **Remove**	The arrow buttons change the order of the cards; the bin removes the card.

Add a record field. The link **Add a record field** at the bottom adds a new empty card at the end (a number box with no name). Fill in at least the name.

What happens when you change a box

- **Changing the kind to "Choice from a list"** fills the options with Yes and No if the box had none. Change them to suit.
- **Changing the kind away from Number** removes the unit and the normal range. If you switch back, you must type them again.
- **Changing the kind away from Choice** removes the options.

Where each kind of box appears on the Daily Log

Kind	Panel on the Daily Log	Hint appears
Required numbers	**Key Measurements ***	Under the box
Choice	**Status & Condition**	Not shown
Other numbers	**Additional Measurements**	Under the box
Free text	**Activity Log**	Beside the label and as grey text inside the box
Calculated	**Auto-Calculated** (only when it has a value)	Not shown

The order of the cards decides the order inside each panel.

Calculated boxes. You cannot add a calculated box in the editor. The built-in ones (**Total Milk Yield** for livestock and **Processing Yield** for processing) can be moved, renamed or removed. They only work while the boxes they are calculated from are still on the list.

Boxes tied to cycle types. A box that the built-in template shows only for some cycle types keeps that restriction when you save. For example, the incubator boxes keep showing only for the **Egg Incubation & Hatch** type. A box you add yourself shows for every cycle type.

> **Watch out:** Mark a box as **Required** only if it is a **Number** box. Required boxes are always placed in **Key Measurements** and drawn as number boxes. A required choice or text box would not work properly there.
>
> **Watch out:** Behind the scenes, every box you add gets a hidden code that is made from a common name and a number, and the app reuses the first unused code. If you delete a box and add a new one afterwards, the new box can get the same hidden code as the deleted one, and old saved values of the deleted box would then show up under the new box's name. If you want to stop recording something, it is safer to keep the box and leave it empty, or rename it. Remove a box only when it has never been used.

The Care guide tab

The tab starts with the explanation: "Days count from the start of the cycle (day 0). A single day is a one-off task; add a repeat to make it recur; give an end day without a repeat to cover a whole phase (such as 'Starter feed, day 0–13'). Check every dose and product with your vet or extension officer."

Each care item is one card. The tab lists all items in the guide, including items that apply only to some cycle types (these carry the line "Applies only to some cycle types of this enterprise.").

Controls on every care card

Control	What it does
Type	Feed, Water, Vaccination, Medicine, Spray, Fertiliser, Weigh / sample, Check or Task. Sets the coloured tag.
What	The title of the item, for example "Gumboro vaccine". Required.
Product / feed type	The feed, vaccine, chemical or fertiliser, for example "Broiler starter (crumbs)".
Dose / amount	Free text, for example "25 g/bird/day" or "200 kg/ha".
How (route / method)	For example "Drinking water", "Eye drop", "Foliar spray".
Withdrawal (days)	The number of days before harvest, slaughter or milk use that this must stop. The Care Plan then shows "Stop (n) days before harvest / slaughter / milk use — check the label."
Starts on day	The cycle day the item starts. 0 is the start date. If left empty it counts as 0.

Control	What it does
Repeat every (days)	Leave empty (it shows "no repeat") for a one-off or a phase. Type a number of days for a repeating item.
Until day	The last day. With a repeat, the item stops after this day. Without a repeat, it turns the item into a phase covering the whole stretch. If you leave it empty the item is one day only.
Notes	Any extra information that shows under the item.
Remove	The bin button deletes the item.

Adding an item. Under the list, next to the word **Add:**, click one of the coloured buttons: **+ Feed**, **+ Water**, **+ Vaccination**, **+ Medicine**, **+ Spray**, **+ Fertiliser**, **+ Weigh / sample**, **+ Check** or **+ Task**. A new empty card of that type is added at the end, starting on day 0.

Sort by day. The link **Sort by day** (right side) puts the cards in order of their start day. This only tidies the editor; the Care Plan always orders items by day by itself.

The line below the buttons shows the item count and lists the colour-coded types.

How the three shapes are made

You want	Fill in	Leave empty
A one-off (a vaccine on day 14)	**Starts on day** = 14	**Repeat every**, **Until day**
A repeating job (weigh every 7 days from day 7 to day 42)	**Starts on day** = 7, **Repeat every** = 7, **Until day** = 42	—
A phase (starter feed, days 0 to 13)	**Starts on day** = 0, **Until day** = 13	**Repeat every**

> **Tip:** Think of "Until day" as the last day the item still applies. For phases that follow each other, set the next phase to start the day after the previous one ends (starter ends on day 13, grower starts on day 14), so that there is no gap in "The programme right now".

Back to built-in defaults

The button **Back to built-in defaults** (at the right of the two tabs) asks "Replace everything here with the built-in defaults?" If you confirm, **both tabs** are refilled with the built-in daily boxes for the category and the built-in starter care guide of the template. Your edits in the open editor are discarded. Nothing is saved until you click a save button.

Use it when you made a mess and want to start again. It restores the built-in category boxes (all of them, including those for other cycle types) and the starter guide.

Naming your template

At the bottom left of the window, **Template name** is filled in for you:

- For a built-in template the suggested name is "My" followed by the template name, for example "My Tomato".
- For a template that is already yours, it shows its current name.

Change it to something meaningful. The name is also used as the short name, so it appears in cycle names, in the **Add Enterprise** window and in the Care Plan drop-down. See "Good practice" for naming ideas.

The save buttons

Button	Shown when	What it does
Save as my template	The template in use is **Built-in**	Creates a new template of yours from the editor's contents. Version 1. The enterprise you opened the editor from switches to it at once.
Save changes	The template in use is **already yours**	Overwrites your template with the new contents and raises the version by one (v1 becomes v2). Every enterprise that uses this template switches to the new contents at once.
Save as new copy	The template is already yours	Leaves your existing template as it is and saves the editor's contents as a **new** template (version 1), under the name in **Template name**. This enterprise switches to the copy. Other enterprises keep the old one.
Delete template	The template is already yours	Starts a delete. The button changes to **Confirm delete (back to built-in)**. Click it to remove the template. Enterprises that used it return to the built-in template it was copied from.
Cancel	Always	Closes the editor without saving.

A line under the buttons reminds you: "Saved templates are shared with everyone in your company and can be chosen for your next cycle."

> **Watch out:** **Save as my template** always makes a **new** template, even if you have already saved one from the same built-in template. If you open the editor on the built-in version a second time, you will end up with two saved templates. To improve an existing one, switch to it first (Care Plan drop-down), then open the editor and use **Save changes**.

Messages you may see when saving

When something is wrong a red message appears above the footer and nothing is saved. Fix the problem and click save again. The checks cover both tabs at once, so the message may refer to a card on the other tab.

Message	What to do
Every record field needs a name.	A box on the Daily record fields tab has an empty **Name**. Fill it in or remove the card.
"(name)" is a choice field — give it at least two options.	A **Choice from a list** box has fewer than two non-empty lines in **Options — one per line**. Add options or change the kind.
Every care-guide item needs a title.	A card on the Care guide tab has an empty **What**.
"(title)": the end day is before the start day.	The **Until day** is smaller than **Starts on day**.
"(title)": repeat every must be 1 day or more.	**Repeat every** is 0 or negative. Leave it empty if you do not want a repeat.
Give your template a name.	**Template name** is empty.

What saving does, in plain terms

When you save:

1. The editor's boxes and care items are stored in the template. Blank lines in choice options are dropped, and names are trimmed.
2. The template is stored with your company, next to your other saved templates.
3. The enterprise you opened the editor from is switched to it right away.
4. The Daily Log and Care Plan of that enterprise show your version straight away, for every cycle of the enterprise.

The starter-guide warning disappears, because the guide now belongs to you.

> **Note:** Your saved template is a copy. If AGRINUXES later improves its built-in starter guides or boxes, your copy is not changed. You can compare by switching the enterprise back to the built-in version on the Care Plan tab.

Worked example A: a broiler farmer adds a feed brand and a water additive and changes the vaccination days

The situation. Chanda runs "Chongwe Broilers" on the built-in Broiler Chicken template. He buys feed from two local mills and wants to record the brand. His vet gives him a Gumboro programme with two doses and wants an acidifier in the drinking water from day 10 to day 20. Chanda wants all this in his Daily Log and Care Plan.

> **Note:** The numbers in this example are made up to show how the editor works. They are not veterinary advice. Chanda would use the days and products his own vet gave him.

Before. The built-in broiler boxes already include **Type of Feed** (Starter, Grower, Finisher and so on), **Water Additive** (text), **Vaccine / Medicine Given** (text) and **Water Consumed**. The starter vaccination calendar has Newcastle + IB on day 7, Gumboro on day 14 and a Newcastle booster on day 21. There is no acidifier item.

Step by step: the Daily Log

1. Click **Production**, then open Chanda's broiler cycle.
2. Click **Daily Log**, then click **Customise fields**. The editor opens on **Daily record fields**.
3. Scroll to the bottom and click **Add a record field**.
4. In the new card, type the **Name**: Feed Brand.
5. Change **Kind** to **Choice from a list**. In **Options — one per line** replace "Yes" and "No" with three lines: Local mill A, Local mill B, Own mix.
6. Use **Move up** until the card sits just below **Type of Feed**.
7. Click **Add a record field** again. **Name**: Water Additive Dose. **Kind**: Number. **Unit**: ml per 20 L. In **Hint shown under the box (optional)** type "Measure with a syringe".
8. Leave **Required** unticked on both. Keep the existing **Water Additive** box to record the product name.

Step by step: the Care guide

1. Click the **Care guide (17)** tab.
2. Find the card **Gumboro (IBD)**. Change **Starts on day** from 14 to 12.
3. Find **Newcastle booster**. Change **Starts on day** from 21 to 28.
4. Click **+ Vaccination**. In the new card: **What** = Gumboro second dose; **Product / feed type** = IBD vaccine as advised by my vet; **How (route / method)** = Drinking water; **Starts on day** = 21.
5. Click **+ Water**. **What** = Acidifier in the drinking water; **Product / feed type** = Water acidifier; **Dose / amount** = As per label; **How** = Drinking water; **Starts on day** = 10; **Until day** = 20 (leave **Repeat every** empty, so this is a phase).
6. Click **Sort by day** to tidy the list.
7. In **Template name** type "Chongwe broilers — vet programme v1".
8. Click **Save as my template**.

After

	Before (built-in)	After (Chanda's template)
Daily Log boxes	11 for this cycle type	13 for this cycle type: **Feed Brand** (list) under Type of Feed, and **Water Additive Dose** (number, ml per 20 L)
Daily record fields tab count	(23)	(25)
Gumboro (IBD)	Day 14	Day 12
Gumboro second dose	not in the guide	Day 21
Newcastle booster	Day 21	Day 28
Acidifier in the drinking water	not in the guide	Phase, days 10 to 20
Whole guide	17 items	19 items
Template tag on Care Plan	Built-in	My template · v1
Starter guide warning	Shown	Gone

The Daily Log now says "Using your template **Chongwe broilers — vet programme v1**". On days 10 to 20 the Care Plan shows the acidifier under **The programme right now**.

> **Tip:** If the cycle is already on day 13 when you move Gumboro to day 12, the item is now behind: it appears under **Overdue** as "1 day late". Tick **Done** if you already gave it, or give it and then tick.

Worked example B: a tomato grower adds a spray programme with withdrawal days

The situation. Mutale grows tomatoes in Block B. Her agronomist gave her a spray calendar with two fungicides in rotation and a rule: the last spray of each product must be early enough to respect its waiting period before the first pick. She wants the calendar on her Care Plan with the waiting periods visible.

What the waiting period means. The **withdrawal period** (also called pre-harvest interval) is the minimum number of days between the last spray and harvest. It is printed on the product label. If the label says 14 days, you must not harvest for 14 days after that spray.

> **Note:** The product names, days and withdrawal figures below are placeholders to show how the screen works. Use the exact products, rates and waiting periods from your agronomist and the product label.

Before. The built-in tomato guide (11 items) has two spray lines: "Preventive fungicide against early and late blight" (day 40 to 125, every 10 days, 7 days withdrawal) and "Insecticide — only if scouting finds pests" (day 42 to 125, every 10 days, 7 days withdrawal). Both run until day 125, longer than the time the crop is picked.

The tomato template's stages add up as follows: Nursery 28 days, Land Prep & Transplanting 7, Vegetative Growth 30, Flowering & Fruit Set 21, so picking starts at about **day 86**. Harvesting runs from there for about 45 days.

Step by step

1. Click **Production** and open Mutale's tomato cycle.
2. Click **Care Plan**, then **Set my standards**. The editor opens on the **Care guide** tab.
3. Find the card **Preventive fungicide against early and late blight**. Change it as follows:

   - **What**: Fungicide A (protectant) — spray every 14 days
   - **Product / feed type**: Fungicide A (name from my agronomist)

- **Dose / amount**: As per label
- **How (route / method)**: Foliar spray, cover both sides of the leaves
- **Withdrawal (days)**: 7
- **Starts on day**: 35, **Repeat every (days)**: 14, **Until day**: 77

1. Click **+ Spray** and fill in a second card:

- **What**: Fungicide B (systemic) — alternate weeks
- **Product / feed type**: Fungicide B (name from my agronomist)
- **Dose / amount**: As per label
- **How**: Foliar spray
- **Withdrawal (days)**: 14
- **Starts on day**: 42, **Repeat every (days)**: 14, **Until day**: 70
- **Notes**: Do not spray after day 70. The 14-day wait must finish before the first pick (about day 86).

1. Leave the insecticide item as it is, or change its **Until day** to 77 so that it also stops before picking.
2. Click **+ Task**. **What**: Last chance to spray before picking — check every product's waiting period. **Starts on day**: 77.
3. Click **Sort by day**. In **Template name** type "Tomato — Block B spray calendar v1". Click **Save as my template**.

Before and after

Item	Before (built-in)	After (Mutale's template)
Fungicide	One line, every 10 days, day 40 to 125, 7 days withdrawal	**Fungicide A** every 14 days, days 35, 49, 63, 77, 7 days withdrawal
Second fungicide	Not in the guide	**Fungicide B** every 14 days, days 42, 56, 70, 14 days withdrawal
Insecticide	Day 42 to 125, every 10 days	Unchanged, or stopped at day 77
Reminder to stop	Not in the guide	Task on day 77
Whole guide	11 items	13 items

What Mutale sees on the Care Plan. On day 42 the section **Due today** shows a green **Spray** tag with "Fungicide B (systemic) — alternate weeks", then "Fungicide B (name from my agronomist) · As per label · Foliar spray" and an amber line "Stop 14 days before harvest / slaughter / milk use — check the label." After she sprays she clicks **Done**, and the team sees "done 12 Nov by Mutale".

> **Watch out:** The app only displays the waiting period. It does not calculate the last safe spray date, and it will not stop you from harvesting or selling. You must check the dates yourself. That is why Mutale ended Fungicide A at day 77 (7 + 77 = 84) and Fungicide B at day 70 (14 + 70 = 84), both before the first pick at about day 86.

Worked example C: a dairy farmer changes the feeding phases

The situation. Banda keeps dairy cows near Kafue. The built-in Dairy Cattle guide splits the year into a dry-cow ration, an early-lactation ration and one long mid / late-lactation ration. Her nutrition adviser wants a short

close-up ration before calving, a shorter early-lactation phase and a separate late-lactation phase with less dairy meal.

How the dairy guide counts the days. Day 0 is the start of the dry period, which is where the built-in Dairy Cattle stages begin (Dry Period 60 days, Calving 3 days, Early Lactation, Mid & Late Lactation). Calving is on day 60. Banda therefore starts her cycle on the first day of the dry period.

Before (built-in feed phases).

Phase	Days	Product	Dose
Dry-cow ration	0 to 59	Good hay / pasture + minerals	Limit concentrates to about 1–2 kg/day
Early-lactation ration	63 to 163	Dairy meal + hay / silage	About 1 kg dairy meal per 2–3 L of milk above maintenance; roughage free access
Mid / late-lactation ration	164 to 368	Dairy meal + hay / silage	Adjust dairy meal to the milk yield
Mineral lick	0 to 368	Dairy mineral lick	Free access

Step by step

1. Click **Production**, open the dairy cycle, click **Care Plan** and then **Set my standards**.
2. On the **Care guide** tab, find **Dry-cow ration**. Change **Until day** from 59 to 44.
3. Click **+ Feed**. **What**: Close-up (transition) ration. **Product / feed type**: Dry-cow hay with a little lactation meal, as advised. **Dose / amount**: Build up slowly to about 2 kg a day. **Starts on day**: 45. **Until day**: 62. Leave **Repeat every** empty.
4. Find **Early-lactation ration**. Change **Until day** from 163 to 120.
5. Find **Mid / late-lactation ration**. Change **What** to Mid-lactation ration, **Starts on day** from 164 to 121 and **Until day** from 368 to 250.
6. Click **+ Feed**. **What**: Late-lactation ration. **Product / feed type**: Dairy meal + hay / silage. **Dose / amount**: Reduce dairy meal as the milk yield falls. **Starts on day**: 251. **Until day**: 368.
7. Click **Sort by day**. In **Template name** type "Dairy — Banda feeding phases v1" and click **Save as my template**.

After (Banda's feed phases).

Phase	Days	Change
Dry-cow ration	0 to 44	Shortened
Close-up (transition) ration	45 to 62	New
Early-lactation ration	63 to 120	Shortened
Mid-lactation ration	121 to 250	Renamed, new days
Late-lactation ration	251 to 368	New
Mineral lick	0 to 368	Unchanged

On the Care Plan, only the phase that covers today is shown under **The programme right now**. On day 50, for example, Banda sees **Close-up (transition) ration** and **Mineral lick**. The built-in calving task on day 60 and the other reminders are untouched, and the whole guide now has 17 items (the 15 built-in items, one of them renamed, plus 2 new ones).

> **Tip:** After you change phases, open **Whole guide** and look down the **When** column. Every day from the start to the end should be covered by one feed phase. A gap means that on those days the Care Plan shows no feed programme.

My templates: saving, sharing and reusing

Where your saved templates live

What it is for. Every template you save is stored in your **company account**, not on one phone or one computer. Everyone in the company, on every device, sees the same saved templates. If a manager saves "Chongwe broilers — vet programme v1" on the office computer, the supervisor sees it on the phone as soon as the page has loaded.

There is no separate "My templates" page. You meet your templates in these places:

Where	What you see
Settings → Enterprises → Add Enterprise	Your templates are listed first, each tile marked **My template**.
Production → New Cycle (step 1)	Under each enterprise the name of the template it follows, which is your template's name if it follows one of yours. Step 3 shows it again in the green summary.
Production → cycle → header	Next to the enterprise name, the template name.
Production → cycle → Daily Log	The line **Using your template (name)**.
Production → cycle → Care Plan → Template in use	The name with the tag **My template · v** and a number, and a drop-down to switch.

Switching an enterprise between the built-in and your versions

Before you start. You have saved at least one version of the template (or someone in your company has).

Step by step

1. Open **Production**, then the cycle, then the **Care Plan** tab.
2. In **Template in use**, find the drop-down at the right. It appears only when there is more than one choice. The choices read **Built-in: (name)** and **Mine: (name)**.
3. Pick the version you want. The switch happens at once. There is no confirmation window.

What changes when you switch

- The Daily Log boxes and the Care Plan of **every cycle of that enterprise** now come from the version you picked.
- Records already saved stay as they are.
- Care ticks stay as they are, as long as the same item still exists on the same day.
- The stages of existing cycles do not change.

> **Tip:** Switching back to **Built-in** is a quick way to compare your version with the starter guide, or to go back if you are unhappy with your changes.

Reusing a template for the next cycle

The enterprise keeps pointing to your template. When you start the next cycle with **New Cycle**, that cycle uses your boxes and your care guide from day 0. Nothing more to do.

Using one template for a second enterprise of the same kind

There are two ways.

Way 1: choose it when you add the enterprise

1. Click **Settings**, then **Add Enterprise**.
2. Type the **Enterprise Name**.
3. Find your template in the grid (it is marked **My template** and is listed first) and click it.
4. Click **Add Enterprise**.

Way 2: switch an enterprise you already have

1. Make sure the second enterprise exists (it may follow the built-in version).
2. Open a cycle of that enterprise, click **Care Plan**.
3. Use the drop-down in **Template in use** and pick **Mine: (your template)**.

If you want the second enterprise to have a slightly different version, choose your template for it, open **Set my standards**, change what you need and click **Save as new copy** with a new name.

What happens to cycles when you change, switch or delete

What you do	Effect on existing cycles of the enterprise
Save changes to your template	All cycles that use it show the new boxes and care guide immediately. The version number goes up by one.
Save as my template or **Save as new copy**	The enterprise you used it from switches to the new template. Its cycles show the new boxes and care guide. Other enterprises are not affected.
Switch the enterprise with the **Template in use** drop-down	Its cycles show the chosen version.
Delete template	Every enterprise that used it goes back to the built-in template it was copied from. Its cycles show the built-in boxes and starter guide.

Things that stay the same in every case:

- **Daily records you saved are never deleted by a template change.** If a box no longer exists in the new version, the old value is still shown in **Recent Records**, but under its internal code instead of a friendly name, and without its unit or red-range check.
- **Stages.** A cycle keeps the stages it was created with. Editing a template does not add or remove stages in running cycles.
- **Care ticks.** Each tick belongs to one care item on one day. If you delete an item, its ticks no longer appear. If you move an item to another day, the new day starts with no tick.

> **Watch out:** Because a change reaches running cycles at once, do not rewrite the care guide for a batch that is half-way through unless you mean to. Moving Gumboro from day 14 to day 12 on a flock that is on day 13

will show it as one day late. Use **Save as new copy** with a clear name and switch only the enterprise (or start a new cycle) that should use the change.

Limits

What you can and cannot change:

You can change	You cannot change in the editor
The boxes on the Daily Log (names, kinds, units, required, normal ranges, targets, options, hints, order)	The stages of the template and their lengths
The care guide (items, types, products, doses, methods, withdrawal days, start day, repeat, end day, notes)	The measurements, key activities, alerts and expected outputs shown on the **Stages** tab
The name of your template	The Production KPIs and their benchmarks
	The list of cycle types and the setup questions in the New Cycle wizard
	The event types in the **Events** tab
	The built-in templates themselves

Also remember:

- A saved template always descends from one built-in template. You cannot turn a tomato template into a cattle template. Add a new enterprise from the right built-in template instead.
- There is no history of older versions. **Save changes** overwrites. If you want to keep an older version, use **Save as new copy** and put the version in the name.
- Saved templates belong to your company. They cannot be sent to another company.
- The editor does not ask for any extra permission. Anyone in your company who can open a cycle in **Production** can open the editor, and can save or delete your company's templates. Tell your team who is allowed to make changes.
- The approval workflow ("Require approval for edits") does not cover template changes or Care Plan ticks.

Importing daily records from a spreadsheet (CSV)

What it is for

If you keep your records on paper or in Excel, you can load many days at once instead of typing them one by one. You prepare a file with one row per day, import it, check the preview, and AGRINUXES creates one daily record for each good row. This is also the quickest way to load past records when you start using the app mid-way through a cycle.

Before you start

- The cycle must be **active**, and you must be on its **Daily Log** tab.
- Choose the right **Stage** in the stage list first. Rows with no stage in the file are put into this stage.
- You need a spreadsheet program that can save as CSV (Excel, Google Sheets, LibreOffice). CSV means "comma-separated values", a plain text file that every spreadsheet program can write.

Two buttons sit under **Save Daily Record**: **Import CSV** and **Template**.

Step 1: download the template

1. On the **Daily Log** tab click **Template**. A file downloads with a name made from the cycle name, for example `Broiler_Oct_2026_daily_records_template.csv`.
2. Open it in your spreadsheet program.

The template file has three rows:

Row	Contents
Row 1: column headings	`date`, `stage`, then one column for each box on your Daily Log that you can type into, then `notes`. The headings are the boxes' internal codes.
Row 2: guidance line	Every cell starts with #. It tells you what each column wants: the date format, the stage names, each box's label with its unit, the list of allowed answers for choice boxes, and a star for required boxes. The import ignores this row.
Row 3: sample row	Today's date, the first started stage, a `0` in every number box, the first answer of every choice box, and an empty text box.

> **Watch out:** The sample row is real data. If you leave it as it is, it will import with zeros and the first choice answers. Replace it with your first day's figures or delete it.

Calculated boxes (such as Total Milk Yield) are not in the template. They are worked out for you during the import.

Only the boxes that apply to your cycle type are included. For a broiler cycle you will not get the egg or incubator columns.

Step 2: fill in the rows

Type one day per row. The rules:

Column	What to type
date	Required. (The headings `day` and `record date` also work.) Use `2026-10-06` (year-month-day). Day-first dates such as `06/10/2026`, `6-10-2026` or `6.10.26` are also read, and are always read **day first**, so `10/6/2026` means 10 June. Two-digit years count as 20xx.
stage	Optional. (The heading `phase` also works.) The stage name exactly as shown in the Daily Log stage list, for example `Brooding`. Capitals and spaces do not matter. If you leave it empty, or have no stage column, the row goes into the stage you had selected.
Any box	The column heading may be the box's internal code (as in the template) or its label on the screen, for example `Feed Consumed` or `feed_kg`. Capitals, spaces and punctuation do not matter.
Number boxes	Plain numbers. Use a full stop for decimals (`2.5`). Do not type the unit.
Choice boxes	One of the allowed answers, spelled as on screen.
Text boxes	Any words.
notes	Optional. Headings `notes`, `note`, `observations`, `comments` and `remarks` are all accepted.

You may leave any box empty. Keep the heading row at the top. You can delete columns you do not need.

> **Watch out:** Do not use a comma as the decimal sign. A comma inside a number is removed by the import, so `12,5` becomes `125`. If your computer's regional settings use decimal commas, change the numbers to use a full stop before you save the CSV.

> **Tip:** In Excel, save with **Save As → CSV UTF-8 (Comma delimited)**. In Google Sheets use **File → Download → Comma-separated values (.csv)**. Files with semicolons or tabs between the columns are accepted too.

Step 3: import and read the preview

1. Click **Import CSV**. The window **Import daily records** opens with the cycle name and "one row per day".
2. Click the dashed area (**Drop a CSV here or click to choose**) and pick your file, or drag the file onto it. The grey box under it lists the **Expected columns**: `date`, `stage`, `notes` and the box codes (a red star marks required boxes).
3. The preview appears. At the top you see the file name, a green **n ready** badge, and a red **n with errors (skipped)** badge if some rows are bad. Click **Choose another file** to start over.
4. If some of your column headings were not recognised, an amber box says **Ignored columns not recognised for this enterprise** and lists them. Their data is not imported. Check the spelling, or check that the box exists for your cycle type.
5. The table shows each row: its line number in the file, the date, the stage, the first four boxes, and a **Status** column.
6. Click **Import n records**. The window shows **Imported n records.**

How to read the Status column

Status	Colour	Meaning	Imported?
OK	Green	Nothing wrong.	Yes
A warning text	Amber	Something looks odd but the row is usable.	Yes
An error text	Red row	The row cannot be imported.	No, skipped

Warnings (the row is still imported)

Warning	Meaning
(Box) (value) outside expected (min)–(max)	The number is outside the normal range of that box.
(Box): "(value)" is not one of (list)	A choice answer does not match any allowed option. It is imported exactly as typed.
Stage not started yet	The stage named in the row has not begun in this cycle.
A record for this day already exists	There is already a record for that date and stage. The new row is imported anyway, so you will have two.

Errors (the row is skipped)

Error	Meaning
No "date" column	The file has no date column at all. Every row fails.
Unreadable date "(text)"	The date is empty or cannot be understood.
Unknown stage "(text)"	The stage name does not match any stage of this cycle.
No stage	No stage was given and none is selected.
(Box): "(text)" is not a number	A number box has text in it.
(Box) is required	A required box is empty.
No measurements on this row	The row has a date but no data.

A row can have several messages, joined with semicolons.

Good to know

- Only the **ready** rows are imported. Bad rows are skipped, and the rest still go in. To fix the skipped rows, put only those rows in a second file and import that. Do not import the whole file again, or the good rows will be doubled.
- The same day appearing twice **inside the file** is not flagged. Only clashes with records that are already saved are flagged.
- Imported records are added straight away. They do not go through the approval workflow.
- The preview shows the first 200 rows; all good rows are imported even beyond the 200.
- Imported records look like ordinary records. You can edit or delete them in **Recent Records**.
- Import and Template are not shown on a completed cycle.

Worked example: a broiler batch

Mrs Phiri kept her first five days of records on paper. She downloaded the template for her broiler cycle, kept only the columns she uses, and typed her figures. Her sheet:

date	stage	feed_kg	feed_type	mortality_count	avg_body_weight	house_temp	notes
2026-10-01	Brooding	18	Starter	2	45	33	Chicks placed
02/10/2026	Brooding	20	Starter	1	52	31	
2026-10-03		22	Starter feed	0		30	
2026-10-04	Brooding	abc	Starter				
2026-10-05	Growing	25	Starter	1		30	

What the preview says:

Row	Status	Why
1 (1 Oct)	Amber warning, imported	House Temperature 33 is outside the expected 18–32.
2 (2 Oct)	**OK**, imported	The date `02/10/2026` was read day first as 2 October.
3 (3 Oct)	Amber warning, imported	"Starter feed" is not one of the allowed answers (Starter, Grower, Finisher, Layer mash, Breeder feed, Own mix, Other). It is imported as typed, and goes into the stage she had selected because the stage cell is empty.
4 (4 Oct)	**Error, skipped**	Feed Consumed: "abc" is not a number; Feed Consumed is required.
5 (5 Oct)	**Error, skipped**	Unknown stage "Growing". The broiler stage is called **Grower**.

The summary reads **3 ready** and **2 with errors (skipped)**. She fixes rows 4 and 5, saves a new file with just those two rows, and imports it.

If something goes wrong

What you see	What to do
No data rows found in this file.	The file has only a heading row, or is empty.

What you see	What to do
Everything has the error No "date" column	Rename the first column to `date`.
Your whole column is under **Ignored columns**	The heading does not match a box. Use the label or the code from the template.
Numbers look wrong (125 instead of 12.5)	A decimal comma was used. Use a full stop.
Dates are swapped (June instead of October)	A month-first date was written. Use `2026-10-06`.
Import n records is greyed out	There are no ready rows. Fix the errors first.
The **Import CSV** button is missing	The cycle is completed, or the template has no boxes.

Good practice

Setting your own standards

Your standards should describe what you really do, written down so that every worker follows the same plan.

1. **Start with the starter guide, not a blank page.** Open the Care Plan and read the whole guide once. Mark what you already do, what you do differently, and what you never do.
2. **Bring your vet, agronomist or extension officer.** Sit down with the printed whole guide and let them correct the products, doses, ages and withdrawal periods. Get their advice for your region and your disease history.
3. **Change only what you are sure of.** Leave other items as they are.
4. **Write products and doses the way they are on the pack.** For example "Newcastle La Sota, 1 dose per bird, drinking water", so that a new worker can follow it.
5. **Always fill in withdrawal days for sprays and medicines** that need them, so that the amber warning shows on the day.
6. **Use phases for programmes and repeats for routines.** Feed rations, brooder temperature and drinking-water programmes are phases. Weighing, scouting and sprays are repeating items. Vaccines and transplanting are one-offs.
7. **Keep the cycle start date honest.** Day 0 of the guide must match day 0 of the real cycle. If your crop starts with land preparation in the guide, start the cycle on the day you begin land preparation.
8. **Review after each cycle.** After a batch or season, compare your Daily Log with the plan. Adjust the days, then use **Save changes** or **Save as new copy**.

Examples of standards worth writing down

Area	What to put in the care guide
Feed programme	One phase per ration with the feed name and the amount per animal or per day, the days it applies, and a note on when to change over.
Vaccination calendar	One one-off item per vaccine with the day, product, route (drinking water, eye drop, injection) and a note if the vet administers it.
Spray calendar	One repeating item per product with the interval and the last day, the withdrawal days, and the label rate in the dose. Add a "last spray before harvest" task.
Fertiliser calendar	A one-off for basal fertiliser and one item per top-dress, with product and rate per hectare.
Checks	Repeating items for scouting, weighing and water-quality checks, so that they appear as reminders.

Choosing record boxes

- Record what you will actually use to make decisions: feed, deaths, weight, yield, treatments.
- Add a box for anything your buyer, bank or programme asks you to prove (for example the feed brand, or the batch number of the vaccine).
- Set the **Normal minimum** and **Normal maximum** to what is right for your site. A box that is always red teaches people to ignore red.
- Prefer a **Choice** box over free text when the answers are always the same, so that reports can compare like with like.
- Do not add boxes you will not fill in. A short form is more likely to be completed every day.

Naming your templates

Names are shown everywhere, so make them clear and unique.

- Say what and for whom: "Broilers — Chongwe house programme".
- Add a **version** at the end: "v1", "v2", "2026 season". The app's own version number goes up when you click **Save changes**, but older versions are overwritten, so a version in the name is your only way to keep a history. Use **Save as new copy** to keep the old one.
- Keep names short enough to read in a small tile.
- Do not use the same name for two templates.

Before you rely on a starter guide

- Read the amber warning on the Care Plan. A starter guide is "typical practice, not a prescription".
- Check each product against your country's registered products and the label. Vaccines, dewormers, dips and pesticides differ by country, age of animal and season.
- Confirm withdrawal periods with the label. Milk, meat, eggs and produce must not be sold before the waiting period is over.
- Ask the Department of Veterinary Services or your extension officer for the official vaccination and tick-control schedule for your district.
- If the guide has an item that does not apply to your farm, remove it so that it does not create false overdue reminders.

Troubleshooting and questions

I picked the wrong template when I set up. What now? Add an enterprise with the right template (**Settings → Add Enterprise**). An enterprise cannot be moved to a different kind of farming. Nothing is lost by having an extra enterprise you never use.

The template I want is not on the category tabs in Add Enterprise. The category tabs do not include Insects & Worms, Aquatic Plants & Algae or Forestry & Agroforestry. Click **All**, or type part of the name in the search box.

My search finds nothing. The search matches the template name and the species only. Try a shorter word, for example "tilapia" or "maize".

The wizard offers cycle types that do not look like mine (I keep crickets or trees). Insects & Worms, Aquatic Plants & Algae and Forestry & Agroforestry have no cycle types of their own, so the wizard shows the four Crops types. Pick any; the Daily Log boxes are the same either way.

A box I expect is missing from the Daily Log. Poultry boxes depend on the cycle type. Eggs show only for laying types, incubator readings only for **Egg Incubation & Hatch**, litter only for broilers and turkeys. Check the type of the cycle, or customise the template.

The Care Plan says "Whole guide (0 items)", or shows nothing, although the template has a guide. The items you see depend on the cycle type. A broiler guide is attached to **Broiler Grow-Out**; if the cycle was started with another type, none of those items apply. Start a new cycle with the right type.

Everything is overdue. The Care Plan counts days from the cycle's start date. If you back-dated the start, every earlier item that was not ticked is overdue (it looks back up to 30 days). Tick the items you already did, or correct the start date if it was entered wrongly.

I cannot see Done or Undo. They appear only on an **active** cycle. On a paused, planning or completed cycle the Care Plan is read-only.

I cannot add a record on the Daily Log. A completed cycle shows "Cycle complete — viewing historical records only." If the template has no boxes left (after removing them all) **Save Daily Record** stays greyed out and the Import buttons disappear. Add a box, or go back to the built-in defaults.

It let me save an empty record. Yes. The Daily Log does not check that boxes are filled in. Required stars are reminders only. (The CSV import does check required boxes.)

A box turned red but the record saved. Red means outside the normal range you or the template set. It is a prompt to check, not a block.

Total Milk Yield does not appear. It needs a figure in all three milking boxes. Type 0 for any milking you did not do.

Why did my edit not change a record straight away? Your company may have **Require approval for edits** switched on in **Settings**. The edit waits as **Pending Edits** until the approver clicks **Approve**.

I saved a template and the amber starter-guide warning disappeared. That is expected. The guide is now yours.

Can two people edit the same template at once? Saved templates are shared by the whole company, so agree who is responsible for maintaining them and tell your team before changing one that is in use.

I deleted a template and my enterprise changed. Enterprises that used the deleted template return to the built-in template it was copied from. Your records are untouched.

Will my saved template get the improvements if AGRINUXES updates the built-in guides? No. Your saved template is a copy and stays as you saved it. To see the latest built-in guide, switch the enterprise to the **Built-in** version on the Care Plan tab and compare.

Can I change the stages of a cycle? No. Stages come from the template when the cycle is created and cannot be edited in the template editor.

Quick reference: what to click

I want to…	Click path
Choose my farm's templates when I first sign up	Set-up wizard → step 4 **Setup** → select category cards → click template rows → **Finish setup**

I want to…	Click path
Add a new enterprise from a template	**Settings** → **Enterprises** → **Add Enterprise** → type the name → pick a template tile → **Add Enterprise**
Use one of my saved templates for a new enterprise	**Settings** → **Add Enterprise** → click the tile marked **My template**
Start a new cycle	**Production** → **New Cycle** → choose enterprise and cycle type → **Next →** → answer setup questions → **Next →** → name and dates → **Start Cycle**
Record today's figures	**Production** → open the cycle → **Daily Log** → fill in the boxes → **Save Daily Record**
Change a saved record	**Production** → cycle → **Daily Log** → **Recent Records** → pencil button → **Save Changes**
Delete a saved record	**Production** → cycle → **Daily Log** → **Recent Records** → bin button → **Delete**
Add or change daily boxes	**Production** → cycle → **Daily Log** → **Customise fields**
See what is due today and what is overdue	**Production** → cycle → **Care Plan**
Mark a care item as done	**Production** → cycle → **Care Plan** → **Done** (use **Undo** if wrong)
See the whole care guide	**Production** → cycle → **Care Plan** → **Whole guide**
Change feeding, vaccination or spray days	**Production** → cycle → **Care Plan** → **Set my standards** (or **Edit my standards**) → **Care guide** tab
Save my changes as my template	In the editor: type a **Template name** → **Save as my template**
Update my template later	Open **Edit my standards** → change → **Save changes**
Keep the old version and make a new one	**Edit my standards** → new **Template name** → **Save as new copy**
Go back to the built-in version	**Care Plan** → **Template in use** drop-down → **Built-in: …**
Switch to another version of mine	**Care Plan** → **Template in use** drop-down → **Mine: …**
Throw away my version	**Edit my standards** → **Delete template** → **Confirm delete (back to built-in)**
Start again with the built-in boxes and guide	In the editor: **Back to built-in defaults** (then save)
Download a spreadsheet template for daily records	**Production** → cycle → **Daily Log** → **Template**
Load many days of records at once	**Production** → cycle → **Daily Log** → **Import CSV** → choose file → check the preview → **Import n records**
Turn on approval for edits and deletions	**Settings** → **Edit & Approval Control** → **Require approval for edits**
Approve or reject an edit	**Settings** → **Edit & Approval Control** → **Pending Edits** → **Approve** or **Reject**

Part 3 — Running Production: Cycles, Stages, Events and Outputs

This part explains how to run a crop season, a batch of broilers, a fish pond or any other farm activity from start to finish on the **Production** page. It covers the list of cycles, the cycle header, the **Overview**, **Stages**, **Events**, **Outputs** and **Close Cycle** tabs, how events post money to **Finance** and stock to **Inventory**, and the optional approval workflow for edits and deletions.

Two tabs of the cycle screen are explained in Part 2 — Templates, Record Fields and Care Guides, and are not repeated here: the **Daily Log** tab (the numbers you record every day, the CSV import and customising the record fields) and the **Care Plan** tab (the care-guide checklist). Templates themselves, and how to change them, are also in Part 2. How the Finance and Inventory pages work once the entries arrive is in Part 4 — Running the Farm Business: Inventory, Sales, Finance, Credit and Reports.

Words used in this part

Word	Meaning
Enterprise	One line of farming in your workspace, for example "Broilers", "Maize" or "Tilapia Ponds". Each enterprise uses one template.
Template	The ready-made plan behind an enterprise: its stages, what to measure, expected outputs and target figures (KPIs).
Cycle	One run of an enterprise from start to finish: one batch of chicks, one maize season, one pond. A cycle has a start date, stages, daily records and events.
Stage	One part of the cycle, for example Brooding, Grower, Finishing. A cycle moves through its stages one at a time, in order.
Event	A one-off thing that happens: a purchase, a vaccination, a death, a harvest, a sale. Events are what feed Finance and Inventory.
Output	What the cycle produces (eggs, grain, fish, milk) and where it goes (sale, inventory, processing, own use...).
KPI	Key performance indicator: a target figure to judge how well the cycle is doing, such as feed conversion ratio.

Where your production data is kept

Cycles, stages, daily records, events, transfers and the care-guide ticks are saved to your **company account**. Everyone in your company sees the same cycles on every device, and nothing is lost if you change phone or computer. A copy is also kept in your browser so the page opens quickly and keeps working for a moment if the signal drops; the next change you make saves it again.

The money and stock that events create are saved to the company account too, in **Finance** and **Inventory**.

The Production page

What it is for

The **Production** page (in the left menu) is where you manage every cycle on the farm. The left side lists your cycles; the right side shows the cycle you pick, with its tabs.

Before you start

- You need access to the **Production** module. If your role does not include it, the **Production** item does not appear in your menu. Ask the account owner to change your role in **Team & Permissions** (see Part 1 — Getting Started and Your Account).
- You need at least one enterprise. If you have none, add one first (see Part 1).
- If you open Production from a single enterprise (for example by clicking that enterprise on the Dashboard), the page shows only that enterprise's cycles, and the **New Cycle** form offers only that enterprise. Open **Production** from the menu to see everything.

What you will see

The page has two panels.

Left panel: the cycle list. The heading is **Production Engine**, with a count underneath such as "3 open · 5 closed". The green **New Cycle** button is at the top right of this panel. Below it the cycles are grouped:

Section	What it holds
Open — n	Every cycle that is *active*, *planning* or *paused*, plus programs that still have an open phase. A small pulsing green dot shows these are live.
Individual Cycles	A small label that appears only when you have programs and ordinary cycles together.
Planning and **Paused**	Small labels inside the open section for cycles in those states. Active cycles come first with no label.
Closed / Completed — n	Finished cycles. This section is folded away. Click it to open or close it.

Each cycle row shows:

- A coloured dot for the status: green for active, blue for planning, amber for paused, grey for completed, red for aborted.
- The cycle name in bold.
- The enterprise name with its template icon.
- For an *active* cycle: **Day n** in green (the number of whole days since the start date; the start day itself is Day 0), the name of the current stage, and a thin green progress bar. The bar shows the share of stages already completed.
- For a *completed* cycle: the word **Closed** and a full grey bar.
- A small dustbin icon at the right of the row, which deletes the cycle (see "Deleting a cycle" below).

If a cycle belongs to an enterprise that has since been removed, the row has an amber tint and shows **Enterprise removed** in place of the enterprise name. See "If something goes wrong" at the end of this part.

If you have no cycles at all, the list says **No cycles yet.** and **Start a new production cycle above.**

Right panel: the cycle detail. Until you click a cycle it says **Select a cycle to view details**. Once you pick one, the header, the tabs and the tab contents appear.

Step by step: open a cycle

1. Click **Production** in the left menu.
2. In the left panel, click the cycle you want. The right panel fills with its header and tabs.

3. Click a tab name (**Overview**, **Stages**, **Daily Log**, **Care Plan**, **Events**, **Outputs**, **Close Cycle**) to move between them.

Good to know

- **On a phone or a narrow window** the two panels do not sit side by side. You see the list first. When you tap a cycle, the list disappears and the cycle takes the whole screen. To go back to the list, tap the small **X** at the top right of the cycle header. On a wide screen (a computer or a large tablet) the list stays on the left and the X is not shown.
- The **Close Cycle** tab appears only while a cycle is *active*. Once a cycle is closed the tab is gone.
- A cycle that you just created is *active* straight away; it does not start in *planning*. A *planning* cycle only appears when it was created by a transfer (see "Transfer Output").
- The list does not have a search box or filters. Cycles are shown in the order they were created.

Starting a new cycle

What it is for

A cycle is how you tell the system "I am starting a new batch or season". It builds the stages from your enterprise's template and begins counting days.

Before you start

Have your enterprise set up. Decide the start date and, for animals, how many you are starting with.

Step by step

1. On the **Production** page, click **New Cycle**.
2. **Step 1 of 3.** Under **Which enterprise?** tap the enterprise. Under **What type of cycle?** tap the kind of cycle that fits (for example **Broiler Grow-Out** for poultry or **Rain-Fed Season** for crops). Each choice shows a short description and its usual length ("~42 days"). A grey box named **Stages from template** previews the stages the cycle will have. Click **Next**.
3. **Step 2 of 3.** Fill in the setup questions for your kind of farming (number of birds, area in hectares, number of ponds, and so on). A red star marks the questions that matter most, but the form does not stop you if you skip them. Click **Next**.
4. **Step 3 of 3.** Check the summary, then fill in **Cycle Name** (required), **Start Date** (required), **Expected End** (filled in for you from the cycle type; you can change it) and **Notes** (optional). Click **Start Cycle**.

What you will see

- The cycle appears in the **Open** list with a green dot and **Day 0**.
- One stage per template stage is created. The **first stage is active**, the rest are *pending*.
- The numbers from Step 2 become the cycle's **production units** (for example "Flock — Broiler Grow-Out, 500 birds"), which show on the **Overview** tab.
- The setup answers are copied into the cycle **Notes** as a line beginning "Config:", together with a line "Cycle type: ...".

Good to know

- The cycle type you choose (Step 1) sets the suggested end date and which setup questions you see. It does **not** change the stages. The stages always come from the enterprise's template. To change the stages, change or copy the template (see Part 2).
- The default cycle name is the template's short name and the current month, for example "Broiler Jul 2026". Rename it to something you will recognise, such as "Broiler Batch 3 — House A".
- Eggs set in an incubation cycle are counted as eggs; flocks as birds; herds as head; fish as fish; fields as hectares; greenhouses as square metres; orchards as trees; apiaries as hives; mushroom units as blocks; processing as kilograms of raw material.
- Some enterprise types (insects and worms, aquatic plants such as seaweed and spirulina, and forestry) do not have their own list of cycle types or setup questions. They are given the general crop list. Pick the closest option; the stages still come from your template.

If something goes wrong

- **The Next button is greyed out in Step 1.** An enterprise and a cycle type must both be chosen.
- **The Start Cycle button is greyed out.** The cycle name or the start date is empty.
- **Your enterprise is not in the list.** Only active enterprises are offered, and when you came from one enterprise's own page only that enterprise is offered.

Production programs and phases

What it is for

A **production program** links several cycles into a chain, called **phases**. The typical example is a breeding programme: Phase 1 raises keets (baby guinea fowl) to growers, Phase 2 keeps the best birds as breeders, Phase 3 hatches their eggs. The program groups these cycles in the list, shows how far along the chain you are, and lets you move part of the output of one phase into the next phase, selling the rest.

Before you start — read this first

> **Note:** In the current version there is **no button that creates a program from scratch**. The **New Cycle** form always creates an ordinary stand-alone cycle. The program grouping, the purple program banner and the **Transfer Output** button appear only on cycles that already belong to a program. If your cycles do not show a purple program banner, your farm does not have a program yet and this section does not apply to you. Programs on your account can be set up for you by the AGRINUXES team; ask support if you need one. Once a program exists, every step below works for you.

What you will see in the list

A program is shown as a single card in the **Open** section (or in **Closed / Completed** when every phase is finished):

- A purple stacked-layers icon and the program name.
- A small line such as "3 phases · 1 active" (or "3 phases · 3 completed" when none is active).

- Click the card to unfold the phases. Each phase shows a dot, the phase label (for example "Phase 1: Keet Grow-Out"), the cycle name and a status tag (*active*, *completed*, *planning* or *paused*). Dots are joined by a thin line so it reads as a chain. The dustbin icon appears when you hover over a phase.
- Phases are listed in phase-number order.

Opening a cycle that belongs to a program also shows a **program banner** in the header, in purple. It contains:

- The program name in capital letters.
- A row of chips, one per phase, joined by arrows. The phase you are looking at is solid purple; finished phases are grey with a line through the text; the rest are outlined.
- **Next: Phase n** (with "— planning" if that cycle has not been started), or **Final phase of the program** if you are on the last phase.
- The **Transfer Output** button (see below).
- The **Open Phase →** button (only when there is a next phase). It jumps straight to the next phase's cycle and unfolds the program in the list.

The banner appears only when the program has at least two phases.

How phases link: the source reference

When a transfer creates a new phase (see below), the new cycle remembers which cycle it came from. This record of "where did the starting stock come from" is called the **source reference**. When you move stock into an existing planning cycle instead, that cycle's source reference is set to the cycle you moved from as well. This is how you can trace a flock or a batch back to the cycle that produced it.

Step by step: use the Open Phase button

1. Open a cycle that belongs to a program.
2. In the purple banner, click **Open Phase →**.
3. The next phase opens in the right panel, and its program unfolds in the left list.

Good to know

- Deleting one phase deletes only that cycle, not the whole program. The remaining phases stay grouped.
- A program is "open" while at least one of its phases is active, planning or paused.
- The program name comes from its phases. If a phase has no name stored, the card is titled **Production Program**.

The cycle header

What it is for

The header at the top of the right panel is your at-a-glance status: which cycle, what state it is in, how many days it has run, which stage you are in, and the buttons to move on.

What you will see

Item	Meaning
Template icon, cycle name, enterprise and template name	Which cycle this is.
Status tag	**active**, **completed**, **paused**, **planning** (or aborted, shown in the same way). Green for active, grey for completed, amber for paused, blue for planning.
Dustbin icon	Deletes the whole cycle (see below).
X icon	Closes the cycle view and returns to the list. Shown on small screens only.
Started date	The start date in "day month year" form.
Day n	Whole days since the start date.
n/m stages	Stages completed out of the total number of stages.
Green line with a triangle	The current stage name (active cycles only).
Progress bar	Completed stages divided by total stages.

Care guide banner

If the cycle is active and the care guide has tasks due today or overdue, a coloured bar appears reading **Care guide:** followed by "n due today" and/or "n overdue", and **Open Care Plan** at the right. Blue means something is due today; red means something is overdue. Clicking it opens the **Care Plan** tab. The same number appears in brackets on the tab name. The care guide itself is explained in Part 2.

Advance bar: moving to the next stage

For an active cycle that is not on its last stage, a green bar reads "Currently in **[stage]**. Ready to move to **[next stage]**?" with an **Advance** button.

Step by step

1. Check you have logged what belongs to the current stage (daily records, events).
2. Click **Advance**.
3. The current stage is marked **completed** and gets today's date as its end date. The next stage becomes **active** and gets today's date as its start date. The header, the list row and the progress bar update at once.

Good to know

- There is no confirmation question and no undo. If you click **Advance** by mistake, there is no button to go back a stage. Think before you click.
- You can only move forward one stage at a time and only in the template's order. You cannot skip a stage or jump ahead.
- Stage dates are set only by this button: the end date of the stage you leave and the start date of the stage you enter. The very first stage of a new cycle has no start date of its own, so its length is not shown on the **Stages** tab.
- You can still log events against any stage, including earlier ones: both the **Events** form and the **Daily Log** let you choose the stage.

Last stage bar

On the last stage the green bar is replaced by an amber bar: "You are on the final stage. When done, close the cycle." with a **Close Cycle** button. It takes you to the **Close Cycle** tab.

Deleting a cycle

Click the dustbin in the header (or in the list row). A box asks **Delete this cycle?** (from the header) or **Delete cycle?** (from the list). It names the cycle and says that all its daily records, events and logs will be permanently removed and that this cannot be undone. Click **Delete** to confirm or **Cancel** to keep it.

> **Watch out:** Deleting a cycle is permanent and immediate. It is **not** sent for approval, even when the approval workflow is switched on (see "The approval workflow" below). Money and stock that the cycle's events already posted to **Finance** and **Inventory** are **not** taken back; they stay in those pages and you must correct them there. If you only want to finish a cycle, use **Close Cycle** instead, which keeps all the history.

The Overview tab

What it is for

The **Overview** tab is the summary of the cycle: what you started with, simple running totals, and the targets (KPIs) the template says you should aim for.

What you will see

The tab has up to four blocks, from top to bottom.

1. Production Units. One card for every unit created when you started the cycle: the big number (for example 500), the unit (birds, ha, fish, trees...), the name of the unit and, when you entered one, the breed or variety. If none were recorded it says **No production units recorded.** The quantities are the starting figures from the setup form; they are not reduced when you log deaths or sales.

2. Running Statistics. Four small tiles:

Tile	What it counts
Total Records	The number of daily records saved across all stages.
Total Events	The number of events logged across all stages.
Mortality	Total animals or plants lost, added up from the **Count** on every **Mortality / Loss** event; shown in red when above zero, a dash when none.
Harvested	The quantities on your **Harvest** and **Partial Harvest** events that you routed to **Inventory** or **Direct Sale**, added together and shown in green; a dash when none.

3. Production KPIs. One row for each target figure in the template, for example (broiler template) **Feed Conversion Ratio** with a note "Feed consumed ÷ live weight gained", **Mortality Rate** and **Avg Body Weight**. Each row shows the **Benchmark**: the target the template suggests (for example 1.7 for broiler feed conversion, 3 per cent for mortality, 2.2 kg for body weight). Different templates have different KPIs (a layer template has **Hen Day Production**, **Eggs per Hen Housed**, **Feed per Egg**; a maize template has **Yield per Hectare**; a tilapia template has **Feed Conversion Ratio**, **Survival Rate**, **Average Body Weight** and **Yield per m²**). If the template has no KPIs, this block is not shown.

4. Feed Consumed. Shown only once your daily records contain a feed figure. It adds up the daily feed intake or feed (kg) numbers recorded in the **Daily Log** and shows the total in kg. If the cycle has starting units it also shows **FCR estimate**: the total feed divided by the quantity harvested (with a minimum of 1).

Good to know

- The KPI rows show only the **benchmark**, not your own result. Work out your own result yourself and compare it with the benchmark. Examples: feed conversion = total feed given ÷ total live weight gained; mortality rate = birds lost ÷ birds started × 100.
- The **Harvested** tile adds the quantities as plain numbers and labels the total "kg". If you log some harvests in kg and others in head or crates, the total mixes units, so log each product in a consistent unit if you want this tile to mean something.
- **Mortality** counts only events of the type **Mortality / Loss**. Deaths you type into the mortality box of a **Daily Log** record are not added in here, so use one place consistently. Events are better for a cause (disease, predator, heat) and a date; the Daily Log is better for a quick daily count.
- The **Total Records** and **Total Events** tiles are reliable.
- Stage alerts (warnings such as "Temperature too low for chicks") are not on this tab; they show on the **Stages** tab.

If something goes wrong

- A tile shows a dash: nothing has been logged yet for it. Open the **Events** tab and log a **Mortality / Loss** or **Harvest** event.
- **Feed Consumed** is missing: it appears only once your **Daily Log** records contain a feed figure.

The Stages tab

What it is for

The **Stages** tab shows every stage of the cycle in order, what is expected in each one, and what has happened so far.

What you will see

One card per stage. The card header shows:

- A status icon: a green tick for **completed**; a green ring with a pulsing dot for the current (active) stage; an empty grey circle for stages not reached yet. Stages not yet reached are shown faded.
- The stage name. A green **Current** tag marks the active stage. A small "~14d" shows the template's usual length of the stage.
- A line such as "12 records · 5 events · 14d": how many daily records and events belong to this stage, and how many days the stage has taken. For a finished stage this is its end date minus its start date. For the active stage it is the days since it started. The first stage of a cycle has no start date, so it shows no day count.
- An arrow to unfold or fold the card. The active stage is unfolded when you open the tab.

Stage status

Status	Meaning
pending	Not reached yet.
active	The stage the cycle is in now. Only one stage is active at a time.
completed	You moved past it with **Advance**, or the cycle was closed while it was active.
skipped	A status the system knows about, but nothing in the current version sets it. You will not normally see it.

Unfolded stage card

When a card is unfolded it shows, taken from the template:

- A short description of the stage.
- **Measurements to track.** A grid of boxes, each with the measurement name, its unit and how often to take it (daily, weekly, per event or as needed), and a green **Target** where the template has one. These are the numbers that go into the **Daily Log**.
- **Key activities.** A bullet list of the jobs to do in this stage (for example "Maintain brooder temperature").
- **Alerts.** Coloured notes: red for critical, amber for warning, blue for information, each with an exclamation icon and a message. These are advice from the template, not live alarms that react to your numbers.
- **Expected outputs.** What the stage should produce, with its unit and where it can be sent, for example "Live Broilers (head) → sale, own_use".

> **Note:** If the enterprise behind a cycle has been removed, the template is gone and the stage cards cannot unfold to show details; you only see names, counts and days.

Good to know

- The stages tab is for reading. You cannot edit the stages, dates or measurements here. To change a template, see Part 2.
- Use this tab at the start of every stage to remind yourself what to measure and what to look out for.

The Events tab

What it is for

An **event** is a one-off happening: you bought feed, vaccinated, lost birds, harvested, sold. The **Events** tab is where you log them. Many events also create the matching entry in **Finance** or **Inventory** for you, so you do not enter the same thing twice.

Before you start

- The cycle must not be closed. For a closed cycle the **Log Event** button is hidden (you can still read, edit and delete old events).
- Know the date of the event and which stage it belongs to.
- If you want the money to appear in **Finance**, fill the money fields of the event (see "What each event does automatically").

Step by step: log an event

1. Open the cycle and click the **Events** tab.
2. Click the green **Log Event** button. The form opens (the button then reads **Hide Form**).
3. Under **Event Type** tap the type you need. The label shows how many types your kind of farming has, for example "(12 for poultry)". A grey line under the chips explains the chosen type.
4. Choose the **Stage**. It starts on the current stage. Change it if the event belongs to another stage.
5. Set the **Date**. It starts as today.
6. Fill in the fields for this event type. Fields marked with a red star are the important ones. Money fields show **(cost)** next to the name. Yes/no questions appear as tick boxes and long notes appear at the bottom.
7. Click **Save [event name]**, for example **Save Direct Sale**. The button turns to **Saved!** for a moment and the form closes.
8. Your event appears at the top of **Event History**.

What you will see

The event history list

Below the form, **Event History (n)** lists every event of the cycle, from all stages, newest date first. If there are none it says **No events recorded yet.** Each card shows:

- The event icon and name, the date (day and month) and the stage name.
- On the right, one or more quick figures when the event has them: the count, total collected, honey in kg, total litres, quantity or total weight.
- A pencil icon (edit) and a dustbin icon (delete).
- The description, if it differs from the event name. The description is taken for you from the first of Subject, Product or Item that you filled in; otherwise it is the event name.
- Up to six small chips with the other values you entered (field name, the value and the unit). Empty values and the two internal fields for inventory and routing are not shown.

There is no search or filter on the history. The list is one long list, newest first; use the event icon and the stage name to find what you want.

Computed fields

Some fields fill themselves and are greyed out so you cannot type in them:

- **Total Cost** = Quantity × Unit Cost (Input Purchase).
- **Total Value** = Quantity × Unit Price (Direct Sale).
- **Total Yield** of Milk Collection adds up the morning, afternoon and evening yields as you type them; you can still overwrite it.

The other "computed" fields (Total Cost in Stocking / Seeding and Total Applied in Fertilisation) are shown greyed out but nothing fills them in the current version. See the notes under those events.

Good to know

- **Required fields are only marked, not enforced.** The red star tells you what is important, but the form does not stop you saving without it. Check the form before you click save. An event without its money field posts nothing to Finance.
- **Numbers and dates**: type numbers only (no commas, no "ZMW"). Dates are chosen with the date picker.
- **Editing is limited.** The pencil lets you change only the **Date** and the **Description** (see below). To correct a quantity, price or any other figure, delete the event and log it again.
- **Deleting an event does not reverse its side effects.** If the event added money to Finance or stock to Inventory, that entry stays where it is. Remove or correct it in Finance or Inventory too (see Part 4).
- **Editing an event does not change its Finance or Inventory entry** either.
- Logging the same event twice creates two events and two entries. Check the history before saving again.
- The list of event types depends on the kind of farming. If your enterprise is insects and worms, aquatic plants (seaweed, spirulina) or forestry, the current version offers no event types at all: the type list is empty and **Save** does nothing. For these enterprises use the **Daily Log** and the **Care Plan**, and note events in the Daily Log notes.

Editing an event

1. In **Event History**, click the pencil icon on the event.
2. The **Edit Event** box shows **Date** and **Description**. Change them.
3. If approval is on or a reason is required, a **Reason** line appears (a red star shows when it is compulsory).
4. Click **Save Changes** (or **Submit for Approval** when the approval workflow is on, see below). Click **Cancel** to leave without changing.

Deleting an event

1. Click the dustbin icon on the event.
2. A box asks **Delete Event?** and says "Remove this *[type]* event?".
3. Click **Delete** (or **Submit Deletion** when approval is on). **Cancel** keeps it.
4. When approval or a required reason is on, a **Reason for deletion** line is shown; type why.

If something goes wrong

- **Nothing happens when I click Save.** The event type list is empty for your enterprise type (see above), or no event type is selected. Pick a chip first.
- **No entry arrived in Finance.** Check you filled the money fields named in the next sections (for example Unit Cost and Quantity so Total Cost fills in).
- **The Log Event button is missing.** The cycle is closed.

Event types by kind of farming

The chips you see depend on the kind of farming (the category of your template). The table shows which categories get which events. "All" means every kind of farming except insects and worms, aquatic plants and forestry.

Event type	Offered for
Observation, **Treatment**, **Input Purchase**, **Transfer / Move**, **Direct Sale**, **Harvest**	All: poultry, livestock, aquaculture, crops, horticulture, greenhouse, orchard, apiary, mushroom, processing, services
Mortality / Loss, **Vaccination**, **Weighing / Sampling**	Poultry, livestock, aquaculture
Egg Collection	Poultry
Milk Collection, **Pregnancy Check**, **Weaning**, **Drying Off**	Livestock
Birth / Calving / Farrowing, **Breeding / Mating**	Livestock, poultry
Water Quality, **Stocking / Seeding**, **Feeding Record**, **Partial Harvest**	Aquaculture
Planting / Sowing, **Fertilisation**, **Irrigation**, **Spraying**, **Field Scouting**, **Weeding**	Crops, horticulture, greenhouse, orchard
Pruning / Trimming, **Pollination**	Orchard, horticulture, greenhouse
Fruit Thinning	Orchard, horticulture
Hive Inspection, **Honey Harvest**, **Swarm Control**, **Queen Management**	Apiary
Substrate Preparation, **Inoculation**	Mushroom

So a broiler enterprise sees 12 types (the 6 for all, the 3 animal types, **Egg Collection**, **Birth / Calving / Farrowing** and **Breeding / Mating**); a maize enterprise sees 12; a tilapia enterprise sees 13; a bee enterprise sees 10; a mushroom enterprise sees 8; processing and services see 6.

In the tables below, **Req.** shows a star (*) for fields marked with a red star on screen. "Choice" means you pick from a drop-down list; "Yes/No" means a tick box.

Events for every kind of farming

Observation

For any note about what you saw. No money, no stock.

Field	Kind	Req.	Notes
Subject	Text	*	"What did you observe?" Becomes the event description.
Severity	Choice		Info, Watch, Warning, Critical
Action Taken	Long text		What was done, if anything
Additional Notes	Long text		

Treatment

Disease treatment, medicine or pest control. **Posts a cost to Finance** when Cost is filled.

Field	Kind	Req.	Notes
Product / Chemical	Text	*	Becomes the description
Target (disease/pest)	Text		e.g. Coccidiosis, Aphids

Field	Kind	Req.	Notes
Dose / Rate	Text		e.g. 2ml/L, 500g/ha
Route / Method	Choice		Oral (water), Injectable, Topical, Spray, Pour-on, Drench, Dip, In-feed, Fumigation, Other
Animals Treated (head)	Number		
Area Treated (ha)	Number		
Withdrawal Period (days)	Number		Days before the animal's meat, milk or eggs, or the crop, may be used
Cost	Number (cost)		Triggers the Finance entry
Batch / Lot No.	Text		
Prescribed By	Text		

Input Purchase

For feed, seed, chemicals, animals and any other input you buy. **Posts a cost to Finance** and can **add the item to Inventory**.

Field	Kind	Req.	Notes
Item Name	Text	*	e.g. Layer Mash, Maize Seed
Category	Choice	*	Feed; Seed / Planting material; Fertiliser; Chemical / Medicine; Animals / Birds / Fingerlings; Packaging; Equipment; Fuel; Labour; Other
Quantity	Number	*	
Unit	Text		kg, bags, head, litres...
Unit Cost	Number (cost)	*	
Total Cost	Number (cost)		Filled for you: Quantity × Unit Cost
Supplier	Text		
Receipt / Invoice No.	Text		Carried to the Finance entry as its reference
Add to Inventory	Yes/No		Tick to put the purchased quantity into stock

Transfer / Move

Moving animals, produce or materials between places on the farm. Records only; no money, no stock.

Field	Kind	Req.	Notes
Item / Animal	Text	*	
Count / Quantity	Number	*	
Unit	Text		head, kg, crates...
From	Text		e.g. House 1, Pond A
To	Text	*	e.g. House 2, Quarantine
Reason	Text		
Notes	Long text		

> **Note:** The **Transfer / Move** event is only a record of a movement inside the farm. It is not the same as **Transfer Output** (moving produce into the next cycle of a program), which is described under the **Outputs** tab.

Direct Sale

A farm-gate or direct sale. **Posts income to Finance.**

Field	Kind	Req.	Notes
Product	Text	*	e.g. Live broilers, Maize bags
Quantity	Number	*	
Unit	Text	*	kg, head, bags, crates...
Unit Price	Number (cost)	*	
Total Value	Number (cost)		Filled for you: Quantity × Unit Price
Buyer	Text		
Payment Method	Choice		Cash, Mobile Money, Bank Transfer, Cheque, Credit, Other
Notes	Long text		

Harvest

A harvest or slaughter output. **Adds stock to Inventory** when you route it there.

Field	Kind	Req.	Notes
Product / Output	Text	*	e.g. Maize grain, Live birds, Tomatoes
Quantity	Number	*	
Unit	Text	*	kg, tonnes, head, crates...
Area Harvested (ha)	Number		
Quality Grade	Choice		Premium / Grade A, Grade B, Grade C, Below Grade, Mixed
Route To	Choice	*	Inventory, Direct Sale, Processing, Own Use, Waste
Est. Price / Unit	Number (cost)		Estimate only; posts nothing
Method	Choice		Manual, Mechanical, Combined, Other
Notes	Long text		

Events for animals (poultry, livestock, aquaculture)

Mortality / Loss

Field	Kind	Req.	Notes
Count (head)	Number	*	
Cause	Choice	*	Disease, Injury, Predator, Poor nutrition, Environmental stress, Culled, Unknown, Other
Description	Long text		Symptoms or circumstances
Disposition of Carcass	Choice		Buried, Composted, Incinerated, Rendering, Post-mortem sent, Other

Field	Kind	Req.	Notes
Post-Mortem Done?	Yes/No		

Records only. No money or stock.

Vaccination

Posts a cost to Finance when Cost is filled.

Field	Kind	Req.	Notes
Vaccine Name	Text	*	
Disease Target	Text		e.g. Newcastle, Foot and Mouth
Route	Choice		Oral (water), Eye drop, Nasal spray, Wing-web, Injectable (SC), Injectable (IM), Other
Dose	Text		
Animals Vaccinated (head)	Number	*	
Batch / Lot No.	Text		
Vaccine Expiry	Date		
Cost	Number (cost)		Triggers the Finance entry
Next Due Date	Date		
Administered By	Text		

Weighing / Sampling

Field	Kind	Req.	Notes
Sample Count (head)	Number	*	
Average Weight (kg)	Number	*	
Total Biomass (estimated) (kg)	Number		
Weight Gain Since Last (kg/week)	Number		
Body Condition Score	Choice		1 – Emaciated, 2 – Thin, 3 – Ideal, 4 – Fat, 5 – Obese
Notes	Long text		

Records only.

Events for poultry and livestock

Egg Collection (poultry)

Adds table eggs to Inventory. Hatching eggs are announced to the incubation function (see below).

Field	Kind	Req.	Notes
Total Collected (eggs)	Number	*	
Table Eggs (eggs)	Number		Goes to Inventory as "Table Eggs"
Hatching Eggs (eggs)	Number		Meant for incubation

Field	Kind	Req.	Notes
Cracked / Damaged (eggs)	Number		
Dirty / Soiled (eggs)	Number		
Avg Egg Weight (g)	Number		
Collection Round	Choice		Morning, Afternoon, Evening, Full Day

Birth / Calving / Farrowing (livestock and poultry)

Field	Kind	Req.	Notes
Dam / Mother ID	Text		
Sire / Father ID	Text		
Total Born (head)	Number	*	
Born Alive (head)	Number	*	
Stillborn (head)	Number		
Males (head)	Number		
Females (head)	Number		
Avg Birth Weight (kg)	Number		
Complications	Long text		
Assisted Delivery?	Yes/No		

Breeding / Mating (livestock and poultry)

Field	Kind	Req.	Notes
Method	Choice		Natural mating, Artificial Insemination (AI), Embryo Transfer
Females Bred (head)	Number	*	
Sire / Bull / Boar ID	Text		
Sire Breed	Text		
Semen Batch No.	Text		
Expected Birth (approx)	Date		
Notes	Long text		

Events for livestock only

Milk Collection

Adds fresh milk to Inventory.

Field	Kind	Req.	Notes
Animals Milked (head)	Number	*	
Morning Yield (litres)	Number		
Afternoon Yield (litres)	Number		

Field	Kind	Req.	Notes
Evening Yield (litres)	Number		
Total Yield (litres)	Number	*	Adds up the three yields as you type
Fat %	Number		
Protein %	Number		
SCC (cells/ml)	Number		Somatic cell count, a milk-quality measure
Storage Temp (°C)	Number		
Route To	Choice		Sale, Processing, Own Use / Calves, Waste (mastitis etc)

Pregnancy Check

Field	Kind	Req.	Notes
Method	Choice		Physical palpation, Ultrasound, Blood test, Milk progesterone, Visual
Pregnant (head)	Number	*	
Open / Not Pregnant (head)	Number		
Uncertain (head)	Number		
Expected Birth Range	Text		e.g. 2026-09-01 to 2026-09-15
Notes	Long text		

Weaning

Field	Kind	Req.	Notes
Count Weaned (head)	Number	*	
Avg Weaning Weight (kg)	Number		
Age at Weaning (days)	Number		
Notes	Long text		

Drying Off

Field	Kind	Req.	Notes
Animals Dried Off (head)	Number	*	
Dry Cow Therapy Applied?	Yes/No		
DCT Product	Text		
Expected Next Calving	Date		
Notes	Long text		

Events for aquaculture

Water Quality

Field	Kind	Req.	Notes
Pond / Tank	Text	*	e.g. Pond A, Tank 3
Dissolved Oxygen (DO) (mg/L)	Number		
pH	Number		
Temperature (°C)	Number		
Ammonia (NH_3) (mg/L)	Number		
Nitrite (NO_2) (mg/L)	Number		
Salinity (ppt)	Number		
Turbidity / Secchi	Choice		Clear (>40cm), Moderate (20–40cm), Turbid (<20cm), Algae bloom
Action Taken	Long text		e.g. Added lime, increased aeration

Stocking / Seeding

Putting fingerlings into a pond. The form is built to post the cost to Finance, but see the note.

Field	Kind	Req.	Notes
Species	Text	*	
Pond / Tank	Text	*	
Number Stocked (fingerlings)	Number	*	
Avg Fingerling Weight (g)	Number		
Stocking Density (/m^3)	Number		
Source / Hatchery	Text		
Cost per Fingerling	Number (cost)		
Total Cost	Number (cost)		Greyed out

> **Watch out:** **Total Cost** on this event is greyed out and, in the current version, is not filled in from the number stocked and the cost per fingerling. Because Finance is only charged when Total Cost has a value, the fingerling cost is **not** posted automatically. Record the cost of the fingerlings with an **Input Purchase** event (category **Animals / Birds / Fingerlings**, with Quantity and Unit Cost), or add it in **Finance**.

Feeding Record

Field	Kind	Req.	Notes
Pond / Tank	Text	*	
Feed Type / Brand	Text	*	
Amount Fed (kg)	Number	*	
Feeding Rate (% of biomass)	Number		
Feed Response	Choice		Excellent, Good, Moderate, Poor — uneaten

Field	Kind	Req.	Notes
Estimated Uneaten (%)	Number		
Feed Cost / kg	Number (cost)		Information only; does not post to Finance

> **Note:** Record the money you spend on feed with an **Input Purchase** event (category **Feed**) when you buy it, not on every **Feeding Record**. Otherwise the cost would never reach Finance, or would be counted twice.

Partial Harvest

A selective harvest from a pond or tank.

Field	Kind	Req.	Notes
Pond / Tank	Text	*	
Fish Harvested (fish)	Number		
Total Weight (kg)	Number	*	
Avg Weight (g)	Number		
Est. Remaining Biomass (kg)	Number		
Route To	Choice		Sale, Processing, Inventory, Own Use
Price / kg	Number (cost)		Information only

Choosing **Inventory** adds the total weight to stock. Choosing **Sale** does **not** post income by itself; record the sale with a **Direct Sale** event.

Events for crops, horticulture, greenhouse and orchard

Planting / Sowing

Field	Kind	Req.	Notes
Crop / Variety	Text	*	
Area Planted (ha)	Number	*	
Seed Rate (kg/ha)	Number		
Seeds per Hole	Number		
Row Spacing (cm)	Number		
Plant Spacing (cm)	Number		
Planting Depth (cm)	Number		
Method	Choice		Broadcast, Direct drill, Transplant, Hand planting, Ridges, Beds
Seed Source	Text		
Seed Cost	Number (cost)		Information only

Fertilisation

Field	Kind	Req.	Notes
Product / Fertiliser	Text	*	e.g. D-Compound, Urea, Cattle manure
Type	Choice		Basal dressing, Top dressing, Foliar spray, Organic / Manure, Lime / pH amendment, Fertigation
Application Rate (kg/ha or L/ha)	Number		
Area Applied (ha)	Number	*	
Total Applied (kg or L)	Number		Greyed out, not filled in the current version
Application Method	Choice		Broadcast, Banded / Side-dressed, Foliar spray, Fertigation / Drip, Manual basal
NPK Grade	Text		e.g. 10:18:24
Cost	Number (cost)		Information only
Notes	Long text		

Irrigation

Field	Kind	Req.	Notes
Area Irrigated (ha)	Number	*	
Method	Choice		Flood / Basin, Drip, Sprinkler, Furrow, Centre pivot, Manual / Watering can
Duration (hours)	Number		
Water Applied (mm)	Number		
Water Source	Choice		Borehole, River / Canal, Dam / Reservoir, Municipal / Town, Rainwater harvest, Other
Cost (fuel/electricity)	Number (cost)		Information only
Notes	Long text		

Spraying

Field	Kind	Req.	Notes
Product Name	Text	*	
Active Ingredient	Text		
Target Pest / Disease / Weed	Text	*	
Type	Choice		Herbicide, Fungicide, Insecticide, Acaricide, Bactericide, Growth Regulator, Other
Rate (g or ml / ha)	Number		
Water Volume (L/ha)	Number		
Area Sprayed (ha)	Number	*	
Equipment	Choice		Knapsack sprayer, Tractor boom, Drone / UAV, Aerial, Fogger / Mist blower

Field	Kind	Req.	Notes
Pre-Harvest Interval (days)	Number		The days that must pass between spraying and harvest
Wind Speed	Text		e.g. Calm, <10 km/h
Cost	Number (cost)		Information only

Field Scouting

Field	Kind	Req.	Notes
Growth Stage	Text		e.g. V4, Flowering, Pod-fill
Pest / Disease Found	Text		
Severity	Choice		None, Low (<10%), Moderate (10–30%), High (30–60%), Severe (>60%)
Area Affected (%)	Number		
Recommended Action	Long text		
Weed Pressure	Choice		None, Low, Moderate, High
General Observations	Long text		
Next Scouting Date	Date		

Weeding

Field	Kind	Req.	Notes
Area Weeded (ha)	Number	*	
Method	Choice		Hand weeding, Mechanical (hoe), Tractor cultivation, Herbicide (chemical), Mulching
Labour Days (person-days)	Number		
Labour / Material Cost	Number (cost)		Information only
Notes	Long text		

Events for orchard, horticulture and greenhouse

Pruning / Trimming (orchard, horticulture, greenhouse)

Field	Kind	Req.	Notes
Area / Trees	Text	*	e.g. 2 ha, 150 trees
Type	Choice		Maintenance pruning, Corrective pruning, Thinning, Topping / hedging, Skirting, Dead-wooding, Training
Tools Used	Text		
Labour Days (person-days)	Number		
Cost	Number (cost)		Information only
Notes	Long text		

Fruit Thinning (orchard, horticulture)

Field	Kind	Req.	Notes
Area / Trees	Text	*	
Method	Choice		Hand thinning, Chemical thinning, Mechanical
Target Fruit Load	Text		e.g. 1 fruit per 25 leaves
Labour Days (person-days)	Number		
Notes	Long text		

Pollination (orchard, horticulture, greenhouse)

Field	Kind	Req.	Notes
Method	Choice		Honey bee hives (placed), Bumblebee hives, Hand pollination, Natural wind / open
Hives Placed (hives)	Number		
Area Covered (ha)	Number		
Bloom Stage	Choice		Pre-bloom, Early bloom (10%), Full bloom (80%+), Petal fall
Hive Hire Cost	Number (cost)		Information only
Notes	Long text		

Events for apiary (bees)

Hive Inspection

Field	Kind	Req.	Notes
Hive ID	Text	*	
Queen Seen?	Yes/No		
Laying Normally?	Yes/No		
Brood Pattern	Choice		Excellent – solid, Good – minor gaps, Fair – scattered, Poor – serious issue
Honey Stores	Choice		Full – supers capped, Adequate, Low – supplement needed, Empty – emergency
Colony Population	Choice		Very strong (12+ frames), Strong (8–12), Medium (4–8), Weak (<4 frames)
Varroa Mite Count (mites/100 bees)	Number		
Disease / Pest Signs	Text		
Action Taken	Long text		

Honey Harvest

Adds honey to Inventory.

Field	Kind	Req.	Notes
Hives Harvested (hives)	Number	*	
Frames Extracted (frames)	Number		
Honey Yield (kg)	Number	*	Goes to Inventory as "Honey"
Wax Yield (kg)	Number		
Moisture %	Number		
Colour Grade	Choice		Water white, Extra white, White, Extra light amber, Light amber, Amber, Dark
Route To	Choice		Sale, Inventory / Storage, Processing, Own Use
Est. Price / kg	Number (cost)		Information only

The honey always goes into Inventory, whichever route you pick. It does not post income; record the sale with a **Direct Sale** event.

Swarm Control

Field	Kind	Req.	Notes
Hive ID	Text	*	
Action	Choice		Caught swarm, Added super (prevent), Split colony, Removed queen cells, Clipped queen wings, Artificial swarm
Swarm Successfully Captured?	Yes/No		
Notes	Long text		

Queen Management

Field	Kind	Req.	Notes
Hive ID	Text	*	
Action	Choice		Queen introduced, Queen removed, Queen marked, Queen clipped, Requeen (replace), Queen cell introduced, Queen cell removed
Queen Source / Breed	Text		
Queen Accepted?	Yes/No		
Notes	Long text		

Events for mushrooms

Substrate Preparation

Field	Kind	Req.	Notes
Substrate Type	Text	*	e.g. Wheat straw, Sawdust
Dry Weight (kg)	Number	*	
Supplement Added	Text		e.g. Wheat bran 20%, Lime 2%
Target Moisture %	Number		

Field	Kind	Req.	Notes
Sterilisation Method	Choice		Autoclave, Pressure cooker, Pasteurisation (hot water), Steam, Lime pasteurisation, Fermentation (LSPS)
Bags / Blocks Prepared (bags)	Number		
Material Cost	Number (cost)		Information only

Inoculation

Field	Kind	Req.	Notes
Spawn Type / Species	Text	*	e.g. Oyster mushroom grain spawn
Spawn Rate (% of substrate wt)	Number		
Bags Inoculated (bags)	Number	*	
Incubation Room / Location	Text		
Expected Colonisation (days)	Number		
Expected Pinning Date	Date		
Spawn Supplier	Text		
Spawn Cost	Number (cost)		Information only

What each event does automatically

Most events only write a line in the cycle's history. Some also create entries in **Finance** and **Inventory** the moment you save them. This table is the complete list. Entries are tagged as coming from Production, linked to the cycle, and use the event's date (today if none).

Event	Finance	Inventory	Only happens when
Input Purchase	Expense (category chosen from your Category answer: Feed, Seed, Fertiliser, Medicine, Labour, Equipment, Transport/Fuel and so on; otherwise "other cost"). Description is the item name. The receipt number is kept as the reference.	If **Add to Inventory** is ticked: stock in, named after the item, with the quantity, unit and cost per unit.	Total Cost has a value (so Quantity and Unit Cost are filled).
Treatment	Expense, category **medicine**.	none	Cost is filled.
Vaccination	Expense, category **medicine**.	none	Cost is filled.
Direct Sale	Income, category **sale income**, described as "Farm sale: product (quantity unit)".	none	Total Value has a value (so Quantity and Unit Price are filled).
Harvest	none	Stock in, named after the Product, if **Route To** is **Inventory**.	Route To is Inventory.
Partial Harvest	none	Stock in (the total weight) if **Route To** is **Inventory**.	Route To is Inventory.
Egg Collection	none	Stock in of "Table Eggs" for the Table Eggs figure.	Table Eggs is more than zero.

Event	Finance	Inventory	Only happens when
Milk Collection	none	Stock in of "Fresh Milk" for the Total Yield, in litres.	Total Yield is more than zero.
Honey Harvest	none	Stock in of "Honey" in kg.	Honey Yield is filled.
Stocking / Seeding	Would be an expense of the fingerling cost.	none	Total Cost has a value (in the current version it does not get one; see the watch-out under that event).

Everything not in this table (for example **Planting / Sowing**, **Fertilisation**, **Spraying**, **Irrigation**, **Weeding**, **Feeding Record**) records what happened but **does not** post money or stock, even though some of them have a cost field. For money to reach Finance, use **Input Purchase** (costs) and **Direct Sale** (income).

Good to know

- **Each entry is posted once.** The system gives every event a unique reference, so re-saving the page does not double-post it. Saving a second event does.
- **Direct Sale versus Harvest routing.** Choosing **Direct Sale** in a **Harvest** event's **Route To** list does not create income. Log the money with a separate **Direct Sale** event. For example: log a **Harvest** of 40 bags routed to **Inventory**, then later, when you sell 30 bags, log a **Direct Sale** of 30 bags. Selling from stock through the Sales page is explained in Part 4.
- **Egg Collection and hatching eggs.** When you fill **Hatching Eggs**, the system announces "eggs set" for the cycle so that an incubation function can pick it up. In the current version nothing starts an incubation cycle for you. To hatch those eggs, start an **Egg Incubation and Hatch** cycle yourself with **New Cycle** and enter the number of eggs set.
- **Milk and honey always go to stock.** Milk is added to Inventory whatever you choose in **Route To** (even Waste). Honey is added whatever the route. If part of it is not usable, adjust the stock in Inventory.
- **Deleting or editing an event does not undo these entries.** Fix them in Finance and Inventory (Part 4).
- To see the result, open **Finance** (expenses and income, filtered to this cycle's reference) and **Inventory** (stock movements). Stock entries show the cycle in their reference.

The approval workflow

What it is for

On many farms a worker records data and the owner or manager wants to check changes to old records. When **Require approval for edits** is switched on, changes and deletions of **events** and **daily records** do not apply at once. They wait in a queue until an approver accepts them.

What is covered, and what is not

Covered by approval	Not covered
Editing an event (date and description)	Logging a **new** event or daily record
Deleting an event	Deleting a whole cycle
Editing a daily record (the numbers and notes)	Advancing a stage
Deleting a daily record	Closing a cycle
	Ticking care-guide items

Before you start

- Approvals are set up and decided on the **Settings** page (left menu, bottom). You need access to the **Settings** module to open it.
- Approval is a company-wide switch, not a per-person one.

Step by step: switch the workflow on

1. Open **Settings** from the left menu.
2. Find the box **Edit & Approval Control**.
3. Switch on **Require approval for edits** ("When enabled, changes go to an approver before applying").
4. Type **Your name / Staff member** (the name that will be written on every request, for example "John Banda").
5. Type **Approver name** (for example "Farm Manager"). This name is written on every decision.
6. Tick **Require a reason for every edit or deletion** if you want each request to carry a reason.

The changes save as you type.

> **Note:** These two names are stored once for the whole company. They are not tied to who is logged in. Everyone's requests carry the name typed in **Your name / Staff member**, and every decision carries the **Approver name**. If you want requests to show different people, change the name before you send them. The system does not check who clicks **Approve**: anybody who can open Settings can approve.

Step by step: ask for a change (staff)

1. Open the cycle and the **Events** tab (or the **Daily Log** tab for records).
2. Click the pencil (edit) or dustbin (delete) icon on the item.
3. Make your change. Fill the **Reason** line. It shows when approval is on or a reason is required, and a red star means it is compulsory.
4. A note reads **This edit will be sent for approval before applying.** (in an edit window) or "This will be submitted for approval." (in a delete window).
5. Click **Submit for Approval** (edit) or **Submit Deletion** (delete).

The window closes. Nothing changes in the cycle yet.

Step by step: review requests (approver)

1. Open **Settings**. In the left menu the **Settings** item shows a number badge when requests are waiting. At the top of the **Edit & Approval Control** box an amber tag reads "n pending".
2. Under **Pending Edits (n)** each request is an amber card with: what is being changed (for example "Event — vaccination" or "Daily Record 2026-07-04"), what is changed ("date & description", "measurements & notes" or "DELETE"), who asked, a tag for the type (event, daily record), and a **Before** / **After** comparison (each cut off at 80 characters). If a reason was given it shows as **Reason**.
3. To accept, click **Approve**. The change is applied to the cycle straight away and the request moves to **Recent Decisions** as approved (green).

4. To refuse, click **Reject**. A box titled **Reject Edit** asks for a **Reason for rejection (optional)**. Type why and click **Reject** (or **Cancel**). The change is **not** applied. The request moves to **Recent Decisions** as rejected (red) with your note in quotation marks.
5. Under **Recent Decisions** (the last ten) each card shows the item, the field, "requested by → decided by" and the rejection note if any. Click the small **X** at the right of a card to dismiss it and remove it from the list.

What you will see

There are no banners on the Production page that announce a pending or rejected request. The person who asked can only see the result by checking the item (if it was approved, it has changed) or by asking the approver. A rejected request simply leaves the item as it was. The rejection note is visible to people who open Settings.

Good to know

- When approval is **off**, edit and delete buttons apply immediately and the reason line shows only if **Require a reason** is on. With the reason compulsory, the edit window's save button stays greyed out until you type a reason. The delete windows ask for a reason but do not block you if you leave it empty.
- If a requested item was deleted by someone else before approval, the approval does nothing harmful; the request is still marked approved.
- Approving a deletion of an event or record does **not** remove the Finance or Inventory entries that the event created. See "What each event does automatically".
- Requests are saved to the company account, so an approver on another phone sees them.

The Outputs tab

What it is for

The **Outputs** tab shows what the cycle has produced and where it went: the produce counted per destination, and the log of transfers made to other phases of a program.

What you will see

- **If nothing has been recorded**, the tab says **No outputs recorded yet.** and "Log a Harvest or Sale event, or use Transfer Output to record decisions."
- **Transfer Decisions** (purple cards, with a circular-arrows icon). One card per transfer made from this cycle: the output type, the date, the total quantity and unit, an amber chip with how many were **sold** (and the money earned), a purple chip with how many were **transferred** and to which cycle ("→ cycle name", with "(new cycle)" if a new one was created), and any notes.
- **Totals by destination** (small coloured tiles). One tile for each destination used, with the total quantity.
- **All Logged Outputs.** One line per output: the material name, date and stage, the quantity with its unit, and a coloured destination tag.

The destinations the system knows are:

Destination	Meaning
Sales (sale)	Sold.

Destination	Meaning
Inventory (inventory)	Put into stock.
Processing (processing)	Sent to be processed (for example maize to meal).
Incubation (incubation)	Hatching eggs set.
Hatchery (hatchery)	Sent to a hatchery.
Transfer (transfer)	Moved to another cycle.
Waste (waste)	Lost or thrown away.
Own Use (own_use)	Used by the household or the farm itself.

These are the same eight routes that the template's "Expected outputs" lists on the **Stages** tab.

> **Note:** **Harvest** and **Partial Harvest** events appear here automatically, with the route you chose, in "Totals by destination" and "All Logged Outputs". **Direct Sale** events do not appear on this tab (their money is in **Finance**). The **Transfer Decisions** list is filled by **Transfer Output**, so a cycle that has had a transfer shows it here.

Transfer Output

What it is for

Transfer Output is for programs (see "Production programs and phases"). You have, for example, 300 grown keets at the end of Phase 1. You want to sell 100 and move 200 to Phase 2 to become breeders. The Transfer Output window records that decision and creates or fills the next phase for you.

Before you start

The button is in the purple program banner of a cycle that belongs to a program with at least two phases. Cycles that are not in a program do not show it.

Step by step

1. Open a cycle that belongs to a program and click **Transfer Output** in the purple banner. The window title is **Transfer Output**, with the line "Decide what to sell and what moves to the next cycle". The three steps are shown as **What**, **How to split** and **Where to transfer**.
2. **Step 1 — What.** Under **Output type** pick one of the boxes. The choices depend on the kind of farming:

Kind of farming	Output types offered (unit)
Poultry	Live Birds (birds), Hatched Keets / Chicks (chicks), Hatching Eggs (eggs), Table Eggs (eggs)
Livestock	Live Animals (head), Weaners (head), Milk (litres)
Aquaculture	Fingerlings (count), Harvest Fish (kg)
Crops	Harvested Crop (kg), Seed Stock (kg)
Other kinds	The poultry list is shown

Each box also shows a suggestion such as "→ Grow-Out Cycle". Then type **Total available** (a number of at least 1): how many you have ready to decide on. Click **Next →**.

1. **Step 2 — How to split.** The grey bar shows what is **Available**. Use the amber **Sell** box and the purple **Transfer to next cycle** box:

- Under **Sell**: **Qty to sell** and **Price per [unit] (ZMW)**. The line "= ZMW … revenue" shows the money. A link **Sell all [n]** sets all of it to sell.
- Under **Transfer to next cycle**: **Qty to transfer**. A link **Transfer all [n]** sets all of it to transfer.
- A balance strip shows what you allocated, for example "100 sold + 200 transferred" with "✓ All accounted for", or "n unallocated", or in red "Exceeds [total]!".
- You may sell some, transfer some, sell all, or transfer all. At least one of the two must be above zero, and together they must not exceed the total. Otherwise **Next →** stays greyed out. Click **Next →**.

1. **Step 3 — Where to transfer.**

- If you transfer **nothing** and only sell, you see a **Sale summary** (output, quantity, price per unit, **Total revenue**) and a **Notes (optional)** box ("Buyer name, delivery notes…").
- If you transfer some, a purple strip repeats the numbers. If the program has other phases that are planning or active, you can choose **Add to existing cycle** or **Create new cycle**. If there are none, you go straight to creating a new one.
- **Add to existing cycle:** choose the destination under **Select destination cycle**. Each choice shows the phase label, the cycle name and its status.
- **Create new cycle:** fill **New cycle name *** (required), **Phase label (optional)** (if empty, the suggested label such as "Phase 3: Grow-Out Cycle" is used) and **Enterprise** (starts with the current one; you can pick another active enterprise). A grey box **New cycle will start with:** repeats: the quantity and output type, "Linked to [program] as Phase n" and "Status: Planning — activate when ready".
- Add **Notes (optional)** if you wish.

1. Click ✓ **Confirm Transfer**. (The button is greyed out until a destination or a new cycle name is given.) ← **Back** returns to the earlier step; **Cancel** on step 1 closes the window.

What happens

- The decision is written into the source cycle's transfer list (date, output type, total, sold quantity and price and revenue, transferred quantity, destination and notes). It then shows in **Transfer Decisions** on this tab.
- **Create new cycle:** a new cycle is created with status **planning**, starting today, in the same program, with the next phase number and your phase label. It has a production unit named "[Output type] from [source cycle]" with the transferred quantity. Its stages come from the template of the enterprise you chose, but they are not started yet. After you confirm, the screen jumps to the new cycle.
- **Add to existing cycle:** the chosen cycle gets a new production unit for the quantity, and its source reference is set to the cycle you moved from.
- Nothing is taken off the source cycle's own numbers.

> **Watch out:** The sale part of a transfer is only a **record**. It does **not** post income to **Finance** and does not take anything out of **Inventory**. To bring the money into your books, also log a **Direct Sale** event (or record the sale in **Sales**), as described above and in Part 4.

> **Note:** A new cycle made by a transfer starts in **planning**. It does not appear as active and its day count does not run. To start working in it, open it from the list. Note that a planning cycle shows in the **Planning** section of the open list.

If something goes wrong

- **Next is greyed out in step 1.** The total available must be a number above zero.
- **Next is greyed out in step 2.** You must sell or transfer something, and not more than the total.
- **Confirm Transfer is greyed out.** Choose a destination cycle or give the new cycle a name.

The Close Cycle tab

What it is for

When the batch or season is finished, you close the cycle. This ends it, records the end date and your closing notes, and moves it to **Closed / Completed**.

Before you start

- Log all outstanding daily records, events and sales first. You cannot add a new event to a closed cycle.
- The tab appears only while the cycle is **active**. On the last stage the header also has a **Close Cycle** button.

Step by step

1. Open the cycle and click **Close Cycle** (the tab, or the amber button in the header on the last stage).
2. Read the amber warning: **Closing a cycle is permanent.** Make sure all records and outputs are logged before closing.
3. Check the **Cycle Summary**: **Duration** (days from start to the end date you give), **Daily Records** (how many), **Mortality Events** and **Total Output**.
4. Set the **End Date** (starts as today).
5. Type **Closing Notes** (optional): performance summary, lessons learned, final observations.
6. Tick **I confirm all records and outputs have been entered for this cycle.** The button stays grey until you tick it.
7. Click **Close & Complete Cycle**.

What changes

- The cycle status becomes **completed** and the end date is saved.
- The stage that was active is marked **completed** with your end date. Stages that were never reached stay *pending*; they are not marked skipped.
- The cycle moves to **Closed / Completed**. The row shows **Closed** and a full grey bar. The header shows "completed".
- The **Close Cycle** tab disappears and the **Log Event** button is hidden.

Good to know

- **There is no way to reopen a closed cycle.** If you closed too early, start a new cycle, or ask the AGRINUXES team.

- The **Closing Notes** you type **replace** the cycle's existing notes, including the setup summary that started with "Config:". If you leave the box empty the old notes are kept. Copy anything you want to keep into the closing notes first.
- You can still read a closed cycle, open its tabs, and edit or delete old events and daily records (with approval if the workflow is on).
- **Mortality Events** is the total count on your **Mortality / Loss** events, and **Total Output** adds the quantities of your harvest outputs (shown in kg, so log harvests in one unit). **Duration** and **Daily Records** come straight from the cycle.
- Closing does not post anything to Finance or Inventory. It does not change the shares of costs or income already posted.

Worked examples

These examples use only features that exist. Amounts are illustrations in ZMW, not real prices.

Example 1: A 42-day broiler cycle in Chongwe

Setup (Day 0, 1 July). You have an enterprise "Broilers" using the Broiler Chicken template. Click **New Cycle**, choose the enterprise, choose **Broiler Grow-Out**, enter **Number of Birds** 500, **Breed / Strain** "Ross 308", **House / Pen ID** "House A", **Chick / Egg Source** "your hatchery's name", **Target Slaughter Age** 42. Name the cycle "Broiler Batch 3 — House A". The template gives four stages: **Brooding** (about 14 days), **Grower** (14), **Finishing** (14), **Harvest / Sale** (1). Brooding is active. **Day 0** shows.

On Day 0 (Events). Log **Input Purchase** for the chicks: Item "Day-old Ross 308 chicks", Category **Animals / Birds / Fingerlings**, Quantity 500, Unit "head", Unit Cost 14, Total Cost fills in as 7000. Do not tick Add to Inventory (you will not sell them from stock). Log another **Input Purchase** for feed: "Starter mash", Category **Feed**, 10 bags at 380, tick **Add to Inventory** if you track feed stock. *Result:* Finance shows two expenses (other cost and feed) tagged to this cycle; Inventory shows starter mash if you ticked it.

Every day (Daily Log). Record the morning figures: feed given, water, temperature, deaths and so on (see Part 2). Tick the care-guide items on the **Care Plan** tab as you do them.

Day 7. Vaccination: Vaccine "Newcastle (La Sota)", Route **Oral (water)**, Animals Vaccinated 500, Cost 150, Next Due Date Day 21. A medicine expense of ZMW 150 is posted.

Day 7 and Day 14. Weighing / Sampling: Sample Count 20, Average Weight 0.19 kg, then 0.45 kg. Use this to compare with your targets.

Day 14. Check the header: it says "Currently in **Brooding**. Ready to move to **Grower**?" Click **Advance**. Brooding is completed; Grower starts today. The progress bar shows 1/4 stages.

When birds die. Mortality / Loss: Count 3, Cause **Disease**. Add a **Treatment** if you medicate: Product "Amprolium", Target "Coccidiosis", Cost 90.

Day 28. Advance to **Finishing**.

Day 42. Advance to **Harvest / Sale**. Log a **Direct Sale** for the buyer: Product "Live broilers", Quantity 470, Unit "head", Unit Price 85, Buyer "Lusaka market trader", Payment Method **Mobile Money**. Total Value fills in as 39,950. Income of ZMW 39,950 is posted to Finance. If part is for your own table, log a **Harvest** with Route To **Own Use**.

Closing. Open **Close Cycle**, check the summary, set the End Date, type your closing notes (for example "Feed conversion 1.8, mortality 4 per cent, next batch order starter earlier"), tick the box and click **Close & Complete Cycle**.

What you see afterwards. The cycle sits in **Closed / Completed**. The Dashboard's **Active Cycles** figure goes down by one. **Total Revenue** and **Total Expenses** on the Dashboard include the entries the events posted. In Finance you can review the batch's costs and income. In the **Overview** tab you see **Total Records**, **Total Events** and the KPI benchmarks to compare with your own results.

Example 2: A maize season (rain-fed)

Setup (November). Enterprise "Maize" (Maize Field Crop template). **New Cycle**, type **Rain-Fed Season**, Field / Plot Name "North Field", Area 5 ha, Variety "SC403", Irrigation **Rain-fed (no irrigation)**, Seed Rate 25 kg/ha. The stages are **Land Preparation**, **Planting**, **Emergence & Establishment**, **Vegetative Growth**, **Tasselling & Silking**, **Grain Fill & Maturity**, **Harvest**, **Drying & Storage**: eight in all.

Land Preparation. Look at the stage card on the **Stages** tab for measurements (for example soil pH target 5.5 to 7). Log an **Input Purchase** for lime or manure if you buy any. Log **Weeding** and **Irrigation** as they happen.

Before planting. Input Purchase: "Maize seed SC403", Category **Seed / Planting material**, Quantity 125, Unit "kg", Unit Cost 45. **Input Purchase**: "D-Compound", Category **Fertiliser**, 10 bags. **Input Purchase**: "Urea", Category **Fertiliser**, 10 bags. Finance receives seed and fertiliser expenses.

Planting day. Click **Advance** to move to **Planting**. Log **Planting / Sowing**: Crop "Maize SC403", Area Planted 5, Seed Rate 25, Row Spacing 75, Plant Spacing 25, Method **Hand planting**. This is a record; the money was already posted by the purchases. Then **Fertilisation**: Product "D-Compound", Type **Basal dressing**, Area Applied 5.

Through the season. Advance at each growth change. Log **Fertilisation** (Urea, Type **Top dressing**), **Weeding** (twice), **Field Scouting** (Pest "Fall armyworm", Severity **Moderate (10–30%)**), **Spraying** (Product "your insecticide", Target "Fall armyworm", Area Sprayed 5, Pre-Harvest Interval). Use the **Care Plan** reminders and the stage **Alerts**.

Harvest. Advance to **Harvest**. Log **Harvest**: Product "Maize grain", Quantity 3,000, Unit "kg", Route To **Inventory**. Stock of 3,000 kg of "Maize grain" is added to Inventory. Later, for each sale, log **Direct Sale**: Product "Maize grain", Quantity 1,000, Unit "kg", Unit Price 6 per kg. Income is posted to Finance.

Drying and storage, then close. Advance to **Drying & Storage**, record moisture in the Daily Log, then close the cycle with your yield and lessons in the closing notes.

What you see afterwards. The costs in Finance by category (seed, fertiliser, and so on); maize grain in Inventory; income from the sales; the cycle in **Closed / Completed**.

Example 3: A tilapia pond

Setup. Enterprise "Tilapia Ponds" (Tilapia Pond template). **New Cycle**, type **Pond Grow-Out**, Number of Ponds 2, Fingerlings Stocked 5,000, Species "Nile Tilapia", Water Source **Borehole**, Primary Feed Type **Commercial pellets**, Target Harvest Weight 400. Stages: **Pond Preparation** (about 14 days), **Stocking** (1), **Grow-out** (about 150) and **Harvest** (2).

Pond Preparation. Log **Water Quality** (Pond / Tank "Pond A", pH 7.2, Temperature 26, Dissolved Oxygen 6) and an **Observation** if something is wrong. The stage card shows targets: pH 6.5 to 8.5, dissolved oxygen above 5, temperature 22 to 30.

Stocking day. Advance to **Stocking**. Log an **Input Purchase**: "Tilapia fingerlings", Category **Animals / Birds / Fingerlings**, Quantity 5,000, Unit "fish", Unit Cost 1.50. (This is how the cost reaches Finance; see the note on the

Stocking event.) Also log **Stocking / Seeding**: Species "Nile Tilapia", Pond "Pond A", Number Stocked 5,000, Avg Fingerling Weight 5. Then **Advance** to **Grow-out**.

Grow-out (months). Daily: record feed and water readings in the Daily Log. Weekly: **Water Quality**. Every two weeks: **Weighing / Sampling** (Sample Count 30, Average Weight in kilograms: 0.05, 0.12, 0.25 ...). Whenever you buy feed: **Input Purchase** with Category **Feed**, tick **Add to Inventory**. As fish die: **Mortality / Loss**. If a disease appears: **Treatment**.

Partial harvest. Partial Harvest: Pond "Pond A", Total Weight 600, Route To **Inventory** (stock of 600 kg added). When you sell: **Direct Sale**: Product "Fresh tilapia", Quantity 150, Unit "kg", Unit Price 45.

Final harvest and close. Advance to **Harvest**; log the final **Partial Harvest** and **Direct Sale** events; then **Close Cycle** with your survival rate and average weight in the closing notes.

Good practice

Every day

1. Open **Production** and the active cycle.
2. Fill in the **Daily Log** for today (Part 2).
3. Look at the header: does the **Care guide** bar show anything due or overdue? Open **Care Plan** and tick off what you did.
4. Log any events that happened today: purchases, vaccinations, deaths, treatments, collections (eggs, milk).
5. Check the stage card (on **Stages**) if you are unsure what to measure today.

Every week

1. Log a **Weighing / Sampling** (animals) or **Field Scouting** (crops) event.
2. Read through **Event History**: is anything missing or entered twice?
3. Open **Finance** and **Inventory** and check that the entries from your events look right.
4. Compare your own figures with the **Production KPIs** benchmarks on the **Overview** tab.
5. If approval is on, an approver should clear the **Pending Edits** under **Settings**.
6. Use **Backup & Restore** (left menu) to keep a copy (see Part 1).

At the end of a stage

1. Check you have logged everything for the stage.
2. Click **Advance**. Remember there is no way back.

At the end of a cycle

1. Log the last harvest, the last sales and any leftover stock.
2. Log any transfer to the next phase if you work with a program.
3. Check Finance for this cycle's costs and income, and fix anything missing.
4. Open **Close Cycle**, check the summary, set the end date, write useful closing notes.
5. Tick the confirmation and click **Close & Complete Cycle**.

6. Start the next cycle with **New Cycle** and use your closing notes to improve it.

Troubleshooting

What you see	What it means and what to do
Enterprise removed in amber on a cycle row	The enterprise this cycle belonged to was deleted. The cycle and its data are still there, but its template is gone. Details and stage cards cannot show the template information, and event types fall back to the crop list. Do not log new data in it. Add the enterprise again (Part 1) or close/delete the cycle.
Select a cycle to view details	Nothing is chosen yet. Click a cycle in the list.
No cycles yet.	You have no cycles, or you came from an enterprise page with no cycles. Click **New Cycle**.
A cycle I made is not visible	You may be viewing one enterprise's page. Open **Production** from the menu. Closed cycles are hidden under **Closed / Completed**.
There is no **Close Cycle** tab	The cycle is already closed (or not active).
Log Event missing	The cycle is closed.
No event type chips (insects, seaweed, forestry)	These enterprise types have no event types in the current version. Use the **Daily Log** and **Care Plan**.
Save does nothing in Events	No event type selected, or no types for your enterprise.
Income or cost missing in Finance	The event did not have its money field filled. Purchases need Quantity and Unit Cost; sales need Quantity and Unit Price; treatments and vaccinations need Cost. See the table "What each event does automatically".
Entry appears in Finance but I deleted the event	Deleting an event does not delete its entry. Delete or correct it in Finance.
Overview shows a dash for **Mortality** or **Harvested**	These tiles do not read the Events tab. Count from **Event History**.
My edit did not change anything	Approval is on. Look under **Settings** for the request; it changes only after **Approve**.
I clicked **Advance** by mistake	There is no undo. Carry on in the next stage, or ask support if records must be moved.
The Transfer Output button is not there	Only cycles that belong to a program with two or more phases show it.
New cycle from a transfer is not active	It starts in **planning** on purpose. Find it under **Planning** in the list.
I deleted a cycle by mistake	It cannot be recovered. The team may be able to help only if you have a **Backup & Restore** file from before.

Part 4 — Running the Farm Business: Inventory, Sales, Finance, Credit and Reports

This part is about the money and the goods on your farm. It covers the pages in the left-hand menu that sit between production and the bank: **Dashboard**, **Processing**, **Inventory**, **Sales**, **Trade & Export**, **Finance**, **Credit Profile** and **Reports**.

These pages are connected. When you record a purchase in production, the cost can appear in Finance. When you fulfil a sales order, the income appears in Finance and the goods leave Inventory. The chapter "How the modules talk to each other" explains every link, and ends with a checklist so that you never enter the same thing twice. Read it early: it will save you a lot of work.

> **Note:** Who sees what depends on your role. The owner (the Director) sees everything. Other team members only see the pages their role allows, and each page can allow four things: **view**, **create**, **edit** and **delete**. If a page is missing from your menu, or a button is missing or refuses to work, ask your Director to check **Team & Permissions** (see Part 1 — Getting Started and Your Account).

Default role permissions for the pages in this part:

Role	Inventory	Sales	Trade & Export	Finance	Credit Profile
Director / Owner	All four	All four	All four	All four	All four
Production Manager	View, create, edit	None	None	None	None
Finance Manager	View, create, edit	View, create, edit	View only	View, create, edit	View, create, edit
Sales Manager	View only	View, create, edit	View, create, edit	None	None
Supervisor	View, create, edit	None	None	None	None
Farmhand, Vet Officer, Driver	None	None	None	None	None

Only the Director can **delete** by default. The Director can give a person different permissions in **Team & Permissions**, so your own team may differ from this table.

Dashboard

The Dashboard

What it is for. The Dashboard is the first page you see. It is a one-screen picture of the whole business: money in and out, active production cycles, stock, staff, purchases, and live readings from farm devices. It does not let you change records. It only shows them and gives you shortcuts to the pages where you work.

Before you start.

- Everyone who can sign in to the farm workspace can open the Dashboard.
- The money figures come from Finance and the stock figures come from Inventory. If your role has no access to Finance or Inventory, those figures simply show zero or "—" on your Dashboard. That does not mean the farm has no money or stock. It means your login cannot see it.
- Some blocks (staff, procurement, device readings, activity feed) are read from the data saved on the device you are using. See "Where each number comes from" below.

Step by step: using the Dashboard.

1. Click **Dashboard** in the left-hand menu.
2. Read the heading: your business name, today's date, and a line such as "2 enterprises · 3 active cycles · 5 staff".
3. Click **New Cycle** (top right) to go to Production and start a new production cycle. Click **View Reports** to go to Reports.
4. Read the eight cards in the top strip (described below).
5. Look at the **Revenue vs Expenses** chart, the **Live Readings** block and the **Activity Feed**.
6. Scroll down to **Your Enterprises** to see one card per active enterprise. Click the arrow on a card to open the enterprise, or **View cycle** to open its running cycle.
7. At the bottom, use **View Procurement**, **View Staff** and **View Inventory** to jump to those pages.

What you will see.

The eight cards at the top

Card	What it shows	Where the number comes from
Total Revenue	All income ever recorded, in your currency (ZMW by default). Subtitle: "Recorded income".	The Finance ledger, all income entries, all time. Fulfilled sales orders are already in the ledger, so they are not added twice.
Total Expenses	All costs ever recorded. Subtitle: "All recorded costs".	The Finance ledger, all expense entries, all time.
Net Profit	Income minus expenses. The number is always shown without a minus sign; the subtitle says **Surplus** (you are ahead) or **Deficit** (you are behind).	Calculated from the two cards above.
Profit Margin	Net profit as a percentage of income, for example "18.5%". Shows "—" when there is no income yet.	Calculated. The left edge of the card is green at 20% or more, amber from 0% to just under 20%, and red when negative.
Active Cycles	How many production cycles are running now. Subtitle: how many enterprises are active.	Your farm workspace (production cycles with the status Active).
Inventory Items	The number of stock items. Subtitle: "All stocked", or "N low stock" with an orange badge.	Inventory. An item counts as low when its quantity is at or below its minimum level.
Unresolved Alerts	The number of open alerts from farm devices (water, fish ponds, poultry houses, energy, soil and the device gateway). Subtitle: "Across all modules". Turns red when above zero.	The device pages, saved on this device only.
Active Staff	People marked active. Subtitle: "N total registered".	Staff & Labour, saved on this device only.

The small arrows on some cards are only decoration: an up arrow when the value is positive, a down arrow when it is negative.

Revenue vs Expenses chart

A pair of bars (green for income, red for expense) for each of the last six months, ending with the current month. Above each pair is the net result in thousands, for example "+12k" or "-3k". Hover over a bar to see its exact amount. Below the chart three small figures give **This Month Income**, **This Month Expense** and **This Month Profit** (without a minus sign, green when positive and red when negative).

The chart reads the Finance ledger by the date of each entry.

Live Readings

A small block with a pulsing green dot. It shows four quick readings taken from your device pages:

Reading	What it shows	Colours
Battery	The charge percentage of the first battery listed in Energy.	Green at 60% or more, amber from 30% to 59%, red below 30%.
Water Tanks	How many tanks are more than 80% full, for example "2/4 full".	Blue label.
Aqua DO	The average dissolved oxygen of your fish ponds in mg/L.	Green at 5 or more, amber from 4 to just under 5, red below 4.
Poultry Temp	The average temperature across your poultry houses.	Green between 24 and 32 degrees C, amber outside that range.

If you have no device data for a reading, it shows "—". These readings are only as fresh as the last time the device pages were updated on this device. They are not a live feed from the sensor itself; see Part 5 — Farm Management, Intelligence and Devices for how readings arrive.

Activity Feed

The eight most recent lines from the Activity Log, newest first. Each line shows a coloured module tag (finance, inventory, production, sales, procurement, hr and so on), a subject, some detail and how long ago it happened ("5m ago", "3h ago", "2d ago"). Click the small refresh button to reload the list. When nothing has been logged it says "No activity recorded yet". The Activity Log is kept on this device only.

Your Enterprises

One card for every active enterprise (for example "Broilers" or "Maize"). Each card shows:

- The enterprise icon, its name, its template name and a small category tag.
- If a cycle is running: four **category figures** that depend on the kind of enterprise (see the table below), the cycle name with a pulsing dot, "Day N" since it started, the current stage, "x/y complete", a progress bar with a percentage, a small **Revenue** and **Expenses** strip, and a **View cycle** button.
- If no cycle is running: a message such as "2 completed cycles. Start a new one." with a **Start cycle** button.
- A footer with how many cycles in total and how many are completed.

If you have no enterprise at all, the page shows "No enterprises yet" and an **Add enterprise** button.

Category	The four figures on the card
Poultry	**Flock Count** (birds), **Days in Stage**, **Current Stage**, **Days to End**
Livestock	**Herd Count** (animals), **Days in Stage**, **Current Stage**, **Days to End**
Aquaculture	**Fish Stocked**, **Ponds / Tanks**, **Current Stage**, **Days to End**
Crops	**Area Planted** (ha), **Current Stage**, **Days in Stage**, **Days to End**
Horticulture	**Area Planted** (ha), **Plant Count**, **Current Stage**, **Days to Harvest**
Greenhouse	**Growing Area** (square metres), **Plants**, **Current Stage**, **Days to Harvest**
Orchard	**Trees**, **Plot Area** (ha), **Current Stage**, **Days to End**
Apiary (bees)	**Active Hives**, **Days in Cycle**, **Current Stage**, **Days to End**
Mushroom	**Growing Blocks**, **Days in Stage**, **Current Stage**, **Days to End**
Processing	**Current Stage**, **Days in Stage**, **Stages Done**, **Days to End**
Services	**Current Stage**, **Days in Cycle**, **Stages Done**, **Days to End**

These figures come from the cycle's own settings (its production units, stages and target dates). "Days in Stage" counts from the day the current stage started. "Days to End" counts down to the target end date you set for the current stage; it shows "—" if you did not set one. If a figure cannot be worked out it shows "—".

The three panels at the bottom

Panel	What it shows
Procurement Pipeline	**Pending POs** (purchase orders waiting), **Delivered**, **Paid**, the **Next delivery** date, and **Pending spend** (the value of orders that are pending or ordered). Button: **View Procurement**.
Staff & Labour	**Active staff**, **Hours this week** (last 7 days), **Approved hours**, **Pending approval** (hours not yet approved). Button: **View Staff**.
Inventory Snapshot	**Total value** of stock (quantity times cost per unit), **Low stock items** (shown only when there are some), and the three most valuable items. Button: **View Inventory**.

Good to know.

- **Where each number comes from.** Money, stock and cycles are saved to your company account and are the same for everyone in the business on every device. Staff hours, procurement orders, device readings, device alerts and the Activity Feed are saved on the device you are using. So a colleague on another phone may see different staff or procurement figures. Use **Backup & Restore** (see Part 5) to protect that device-only data.
- The Dashboard has no period selector. The top cards are all-time totals. Use the Finance page for a period such as "Last 3 months".
- The Dashboard looks the same for every role. What differs is the data: a login without Finance access sees zero income and expenses.
- The small **Revenue** and **Expenses** strip on an enterprise card only adds up ledger entries that are linked to one of that enterprise's cycles. If your entries were made without choosing a cycle, or if the figure shows ZMW 0, open **Finance** for the true totals.
- The enterprise card strip always shows ZMW, even if the business currency is different.

If something goes wrong.

- *Everything shows zero.* Your role probably has no access to Finance or Inventory, or the page is still loading. Reload the page, then ask your Director to check your permissions.
- *"Low stock" count looks too high.* An item with a minimum level of 0 and a quantity of 0 counts as low. Set a sensible minimum, or add stock. See the Inventory chapter.

Processing

Processing Engine

What it is for. Processing turns raw produce into finished goods: maize grain into maize meal, raw milk into pasteurised milk, live broilers into dressed birds. You choose a **recipe**, start a **batch**, record what went in and what came out, record quality and costs, and complete it. Finished goods are added to Inventory and the batch cost is added to Finance as an expense.

Before you start.

- Open **Processing** in the left-hand menu.
- To take your own raw material out of stock, and to put finished goods into stock, you need permission to create or edit in Inventory or in Production. If you do not have it, the stock entries are quietly dropped (see "Watch out" below).
- To have the batch cost appear in Finance, the same applies for Finance, Inventory or Production.

> **Watch out:** The recipes and batches themselves are **saved on this device only**. They are not shared with your team and are not backed up automatically. Only the results (stock movements and the cost entry) go to your company account. Use **Backup & Restore** often (see Part 5) and do not clear your browser data.

What you will see on the page.

- A left panel headed **Processing Engine** with the number of batches, a purple button (**New Batch** or **New Recipe**, depending on the tab) and two tabs: **batches** and **recipes**.
- A right panel that shows the details of the batch you click. Before you click one it says "Select a batch to view details".

Recipes

What it is for. A recipe says what goes in (inputs), what comes out (outputs, with the expected percentage of each), and the steps to follow.

Built-in recipes. Five recipes are ready for you:

Recipe	Inputs	Outputs (expected share)
Maize Milling	100 kg Maize Grain	Maize Meal 68% (main), Maize Bran 22% (by-product), Maize Germ 6% (by-product), Waste/Dust 4% (waste)
Milk Pasteurisation	100 litre Raw Milk	Pasteurised Milk 97% (main), Cream 2% (by-product), Waste 1% (waste)
Yoghurt Production	100 litre Pasteurised Milk, 2 g Starter Culture, 5 kg Sugar (optional)	Yoghurt 95% (main), Whey 5% (by-product)
Broiler Processing	100 kg Live Broilers	Whole Dressed Bird 70% (main), Offal 8% (by-product), Feathers 8% (by-product), Blood & Bone 14% (waste)
Tomato Sauce / Passata	100 kg Fresh Tomatoes, 1.5 kg Salt	Tomato Sauce 55% (main), Skin & Seeds 12% (by-product), Water Loss 33% (waste)

Each built-in recipe also lists its steps (for example, for maize: "Clean & de-stone grain", "Mill to required fineness", "Sieve and grade", "Bag finished product"), an estimated labour time per batch and the equipment needed. The inputs are written per 100 units; they are a guide, because you enter the real amounts on the batch.

Step by step: look at a recipe.

1. Click the **recipes** tab.
2. Click a recipe name to open it. You see **Inputs**, **Outputs** (green for main product, amber for by-product, grey for waste) and numbered **Steps**.
3. Click **Start batch with this recipe** to begin a batch with that recipe already chosen.

Step by step: create your own recipe.

1. On the **recipes** tab click **New Recipe**.
2. Type the **Recipe Name** (required), for example "Sausage Casing".
3. Optionally type a **Description**.
4. Optionally type the **Processing Steps**, one per line.
5. Click **Create Recipe**.

> **Watch out:** In this version a recipe you create yourself has a name, description and steps only. The form says inputs and outputs can be added later in a recipe editor, but no such editor exists yet. A batch made from your own recipe therefore has no input or output rows, and no stock or cost entries are produced. Until that is added, use one of the built-in recipes if you want Processing to talk to Inventory and Finance, or record the stock yourself in Inventory.

Batches

What it is for. A batch is one run of a recipe, for example "the 2 tonnes of maize milled on Tuesday".

Step by step: start a batch.

1. On the **batches** tab click **New Batch** (or **Start batch with this recipe** from a recipe).
2. Choose the **Recipe**. A grey box shows its description and coloured tags with the expected output percentages.
3. Check the **Batch Number**. The app suggests one such as "BATCH-202610-482". You can change it.
4. Check the **Start Date** (today by default).
5. Click **Start Batch**. The button is disabled if the recipe or batch number is empty.

The batch opens straight away with the status **In Progress**.

Batch statuses.

Status	Meaning	Colour dot
Planned	Waiting to start. Shows a **Start Processing** button.	Blue
In Progress	Being processed now.	Purple
Completed	Finished. Outputs and cost have been sent on.	Green
Failed	The run was lost or abandoned. Nothing is sent to Inventory or Finance.	Red

The list is grouped under the headings **In Progress**, **Planned**, **Completed** and **Failed**, each with a count. Each row shows the batch number, the recipe name, the start date and, once known, the yield percentage.

> **Note:** A batch you start with **New Batch** begins as In Progress, not Planned. The **Start Processing** button only appears for a batch whose status is Planned, so you will normally not see it. This matters for the next point.

Batch tabs. Open a batch to see its header (number, recipe, status, start date, end date, yield and QC result) and five tabs: **summary**, **inputs**, **outputs**, **quality**, **costs**.

Summary tab.

- Four cards: **Total Input**, **Total Output**, **Overall Yield** and **Main Product Yield**. Overall yield is all outputs (including by-products and waste) divided by all inputs. Main product yield counts only the output marked

main. Colours: overall yield is green at 90% or more, amber from 75%, red below; main yield is green at 65% or more, otherwise amber.

- The recipe name, description and numbered steps, and the estimated labour hours.
- For a batch that is In Progress, a **Complete Batch** box with two buttons: **Mark Completed** and **Mark Failed**.

Inputs tab.

1. Type the **actual quantity** used next to each ingredient. The unit is shown beside it.
2. Click **Save Inputs**.

Outputs tab.

1. If you have not yet saved inputs, a warning says "Enter actual inputs first to calculate yield."
2. Next to each output you see its type (main, byproduct or waste), the target percentage and the target amount worked out from your inputs.
3. Type the **actual quantity** you got. Beside it the app shows the difference from target, for example "+2.5%" in green or "-4.0%" in red.
4. Click **Save Outputs & Calculate Yield**.

Quality tab.

1. Choose **pass**, **pending** or **fail**.
2. Type **QC Notes** (colour, texture, taste, lab results, certificates).
3. Click **Save QC Result**.

Costs tab.

1. Type the **Raw Material Cost**, **Labour Cost** and **Overhead / Utilities** for the batch.
2. The app shows the **Total Cost** and the **Cost per** unit of the main product (total cost divided by the main output quantity).
3. Click **Save Costs**.

Completing the batch.

1. Make sure you have saved the **inputs**, **outputs** and **costs** first.
2. On the **summary** tab click **Mark Completed**. The batch gets today's date as its end date, the yield is recorded, and its quality status is set to **pending**.
3. Then open **quality** and save the real QC result.

> **Watch out:** Click **Mark Completed** only after saving inputs, outputs and costs. The stock and cost entries are created at the moment you complete, using what is saved at that moment. Costs saved later are never sent to Finance. Also, completing sets quality back to "pending", so record quality after you complete.

What Processing sends to other pages.

When	Inventory	Finance
Batch moves to **In Progress** from **Planned**	Each input with a quantity above zero is taken out (Stock Out) to "processing".	Nothing.

Items are matched by name. A finished product that does not exist yet in Inventory (for example "Maize Meal") is created automatically. An input that does not exist in Inventory is skipped without an error.

> **Watch out:** As the page works today, a batch created with **New Batch** is already In Progress, so the "inputs taken out of stock" step does not run. Record the use of your raw material yourself with **Stock Out** in Inventory (see the Inventory chapter), or the raw material will still be counted in stock. Also check the amount of the cost entry in Finance after you complete a batch: the batch total already includes labour and overhead, and these two are added again when the entry is sent, so the entry can be higher than your batch total. Open the entry in Finance and edit the amount if needed.

Good to know.

- The cost entry is added once per batch. Nothing repeats if you open the batch again.
- Quality is recorded on the batch but does not stop stock from being added.
- The Reports page has a "Processing Efficiency" block and a "Batch Profitability" table that read batch weights in kilograms; the Processing page does not record those exact fields, so these report blocks often show 0 (see the Reports chapter).

If something goes wrong.

- *The Start Batch button is grey.* The recipe or the batch number is empty.
- *Finished goods do not appear in Inventory.* The output quantities were still 0 when you completed, or you do not have permission to add stock, or you did not click **Save Outputs & Calculate Yield** first.
- *My batches disappeared.* Processing is saved on this device only. Restore a backup (see Part 5).

Inventory

Inventory (stock items and movements)

What it is for. Inventory is your store book. It lists every item you keep (feed, medicine, seed, fertiliser, packaging, eggs, milk, finished goods), how much of each you have, and every time that amount changed, who did it and why. The quantity of an item can only change through a **movement**, so you always have a trail.

Before you start.

- Everything here is saved to your company account. Your team sees the same stock on every phone and computer.
- Permissions: you need **view** to see stock, **create** to add an item or record **Stock In**, **edit** to change an item or record **Stock Out**, **Adjust** or **Transfer**, and **delete** to delete an item.
- If you have no access you see a padlock and "You do not have access to Inventory". Ask your Director to give you access under **Team & Permissions**.

Step by step: add an item.

1. Click **Inventory** in the left-hand menu.
2. Click **Add Item** (top of the left panel). The button stays grey until the stock has loaded.
3. Fill in the form (the fields are listed in the table below). Only **Item Name** is required.
4. Click **Add Item**. The item appears in the list and the left panel counts it.

The Add Inventory Item form.

Field	What to enter
Item Name *	A clear name, for example "Broiler Starter Feed". The name is how production, sales and processing find this item, so choose it with care (see "How automatic entries find your item").
SKU / Code	Your own code. The **Auto** button builds one from the first letters of the name plus four random digits, for example "BSF-4821". Optional.
Category	One of ten (list below). Default is **Other**.
Unit	How you count it: kg, litre, bag, count. Default is kg.
Opening Stock	What you hold today. It is saved as a first Stock In movement with the note "Opening stock", dated today, so it shows in the history.
Min Stock Level	The level at or below which the item counts as low.
Cost per Unit	What one unit costs you. Used to value your stock.
Location	Where it is kept, for example "Feed Store A".
Supplier	Who you buy it from.
Notes	Anything else.

The expiry date is not on the Add form. Add it afterwards on the **edit** tab.

The ten categories.

Category	Typical items
Feed & Fodder	Starter, grower and finisher feed, hay, silage, bran
Medicines	Vaccines, antibiotics, dewormers
Seeds	Seed and planting grain
Fertiliser	Compound D, urea, NPK, DAP
Chemicals	Pesticides, herbicides, fungicides
Equipment	Pumps, pipes, nets, tools
Packaging	Bags, boxes, crates, trays
Produce	Eggs, milk, honey, fish, meat, harvested crops
Processed Goods	Flour, oil, maize meal and other finished goods
Other	Anything else

What you will see.

The left panel. A heading with the number of items and, in red, how many are low (for example "12 items · 3 low"). Below it:

- A **search box** ("Search items…") that finds a match in the item name or the SKU.
- A **category filter** (**All Categories** or one category).
- A stock filter with three buttons: **All**, **OK** and **Low**. **Low** shows items at or below their minimum. **OK** shows items above it.
- The list. Each row shows an icon, the name, the SKU and category, the current quantity (red when low) and the unit, and a small red dot for low stock.

- At the bottom, the item count and the **Total value** (quantity times cost per unit, added up for all items that have a cost).

The right panel. Click an item to open it. You see its name and quantity, a red warning "Low stock (min: N unit)" when low, the cost and value if a cost is set, three quick buttons (**Stock In**, **Stock Out**, **Adjust**) and three tabs:

- **overview**: Name, SKU, Category, Unit, Min Stock, Cost/Unit, Location, Supplier, Expiry Date and Notes.
- **movements**: the history, newest first (up to the latest 100 entries).
- **edit**: change the details, or delete the item.

Low stock rule. An item is low when its quantity is **at or below** its minimum level (equal counts as low). Beware of items with a minimum of 0: when their quantity reaches 0 they are low, and a brand-new item with minimum 0 and quantity 0 is low too.

Recording a movement (Stock In, Stock Out, Adjust, Transfer)

Step by step.

1. Open the item.
2. Click **Stock In**, **Stock Out** or **Adjust**. (You can switch type inside the window.)
3. Choose the **Movement Type** if you need to change it. The four types are **Stock In (Receive)**, **Stock Out (Dispatch)**, **Stock Adjustment** and **Transfer Location**.
4. Type the **Quantity**.
5. For a transfer, fill in **Moved to**.
6. Check the **Date** (today by default). Optionally add a **Reference** (for example a PO number, delivery note or batch number) and **Notes**.
7. For Stock In you may also type a **Unit Cost (optional)**.
8. Click **Record Movement**.

The four movement types and their rules.

Type	What it does	Rule
Stock In	Adds to the quantity. Use it for deliveries, purchases and goods you produced.	Quantity must be above zero. Needs "create" permission.
Stock Out	Takes away from the quantity. Use it for feed used, goods sold, wastage you want to log as usage.	Quantity must be above zero and cannot be more than what is in stock. Needs "edit" permission.
Adjust	Corrects the quantity after a count, or for spillage, loss or theft.	A positive number adds, a **negative number removes**. It cannot be zero. A removal cannot be more than what is in stock.
Transfer	Moves stock out of this item to another place.	Needs **Moved to** (for example "Store B" or "another farm"). It takes the quantity away from this item. It does not add it to another item, so if the other place is also an item in your list, record a **Stock In** there.

The **Record Movement** button stays grey until the quantity is valid (above zero, or non-zero for an adjustment) and, for a transfer, until you have typed where it is going.

> **Tip:** When you correct a stock count, use **Adjust** with the difference. If the book says 50 bags and you counted 46, adjust by -4 and write "Stock count" in Notes.

> **Watch out:** The unit cost you type on a Stock In is kept on that movement only. It does not change the item's **Cost per Unit**. To change the value of the item, use the **edit** tab.

What the movement history shows. For each movement: its type, the reference (as "ref: ..."), the date, "to ..." for a destination, the notes, and the name of the person who recorded it. The quantity has a plus sign for Stock In, a minus sign for Stock Out and Transfer, and its own sign for an adjustment. Entries that arrived automatically (from production, sales or processing) show the name of the person whose action triggered them.

If something goes wrong.

Message	What it means
Only N unit in stock	You asked to take out, transfer or adjust away more than you have. Lower the quantity.
The quantity must be greater than zero	Stock In, Stock Out and Transfer need a positive number.
An adjustment cannot be zero	Type a positive or negative number.
Say where the stock is going	A transfer needs the **Moved to** field.
Item not found	The item was deleted or belongs to another business. Reload the page.
Permission denied: you need edit access to inventory (or create/delete)	Your role does not allow this action. Ask your Director.
Inventory could not be loaded	A connection problem. Click **Try again**.

Editing an item

Step by step.

1. Open the item and click the **edit** tab.
2. Change any of: **Name**, **SKU**, **Category**, **Unit**, **Min Stock Level**, **Cost per Unit**, **Location**, **Supplier**, **Expiry Date**, **Notes**.
3. Click **Save Changes**.

The page reminds you: "The quantity in stock changes only through Stock In, Stock Out and Adjust, so every change is on record." There is no field to type the quantity directly.

Good to know.

- Setting **Cost per Unit** to blank removes the cost. A cost of exactly 0 is treated as no cost.
- Minimum stock and cost cannot be negative. The message is "Minimum stock and cost cannot be negative".
- Quantities are kept to three decimal places.

Deleting an item

1. Open the item, go to the **edit** tab and scroll to the red **Danger Zone**.
2. Click **Delete this item**.
3. Read the warning "This will permanently delete this item and all its movement history." and click **Yes, Delete**, or **Cancel**.

> **Watch out:** Deleting an item also deletes its whole movement history, and it cannot be undone. If you only want to stop using an item, set its minimum to 0 and leave it. Only roles with "delete" permission can do this.

How automatic entries find your item

Several pages add to or take from Inventory for you, so you do not enter the same movement twice.

Where it starts	What happens in Inventory
Production: a *purchase* event with "add to inventory" ticked	**Stock In** of the item name, quantity, unit and unit cost you typed in the event.
Production: a *harvest* or *partial harvest* event sent to Inventory	**Stock In** of the product name and quantity.
Production: an *egg collection* event	**Stock In** of "Table Eggs", unit "count" (hatching eggs do not go to Inventory).
Production: a *milk collection* event	**Stock In** of "Fresh Milk", unit "litre".
Production: a *honey harvest* event	**Stock In** of "Honey", unit "kg".
Sales: an order is marked **Fulfilled**	**Stock Out** for each order line.
Processing: a batch is completed	**Stock In** of each finished product (and **Stock Out** of inputs when the batch moves from Planned to In Progress).

Matching by name. The app compares the names after ignoring capital letters, spaces and punctuation. "Broiler Starter Feed", "broiler-starter feed" and "BROILER STARTER FEED" are the same item. The code (SKU) can match too. If two items match, the oldest one is used.

Incoming goods that do not match create a new item automatically. Its name is the name sent; its unit is the unit sent (kg if none); its minimum is 0; its category is guessed from the name (words such as feed, bran, hay give **Feed & Fodder**; vaccine, drug give **Medicines**; seed, grain, maize give **Seeds**; fertiliser, urea, NPK give **Fertiliser**; bag, box, crate give **Packaging**; milk, egg, honey, fish, meat give **Produce**; flour, oil give **Processed Goods**; pump, pipe, net, tool give **Equipment**; anything else gives **Produce**). The notes say "Created automatically from production" (or processing). You can then correct the category and cost on the **edit** tab.

Outgoing goods that do not match are ignored without an error. A sale of "Live broilers" does nothing to stock if you have no item with that name.

Not enough stock. An automatic Stock Out takes what is available and notes the shortfall in the movement ("short by N unit"). If the item has nothing at all, nothing is recorded. The sale or batch itself is never blocked.

No double entries. Every automatic movement carries a unique key, so if your connection drops and the app retries, the stock is not added twice.

> **Tip:** Give each item the same name your team uses in production events and on sales order lines. "Maize" in one place and "Maize grain" in another are two different items and will not match.

> **Watch out:** An automatic entry made while you are offline waits on your device and is sent again every 30 seconds and whenever you are back online, up to 20 tries. If your login has no permission to add stock (no Inventory create right and no create or edit right on the production pages), the entry is discarded after the first refusal and does not come back. Ask your Director to correct your permissions, then enter that movement by hand.

Good to know.

- The Inventory page does not show a "syncing" counter. If an automatic movement is slow to arrive, wait a minute and reload.
- The Dashboard and the Reports pages read the same stock list.
- The **Total value** is quantity times **Cost per Unit** for items that have a cost. Items without a cost add nothing.

Sales

Sales (customers and orders)

What it is for. Sales keeps your customers, your sales orders (quotations and invoices in one), and the payments you receive. The server calculates the totals and the order numbers, so they are always consistent.

Before you start.

- Everything is saved to your company account and is shared by your team.
- You need **view** to see Sales, **create** to add customers and orders, **edit** to change an order's status, add payments, notes and edit a customer, and **delete** to delete a customer.
- With no access you see "You do not have access to Sales".

What you will see. A left panel with three small figures at the top, two tabs (**orders** and **customers**), a button (**New Order** or **Add Customer**), a search box, and the list. A right panel shows the order or customer you click.

Figure	Meaning
Revenue	The total of all orders that are not cancelled, including drafts and confirmed orders not yet fulfilled.
Outstanding	What customers still owe: for orders that are not fully paid and not cancelled, total minus paid.
Active Orders	Orders with the status Draft or Confirmed.

> **Note:** The **Revenue** figure on the Sales page counts orders from the moment they exist. The **Finance** page only counts income when an order is **fulfilled**. The two will differ until your orders are fulfilled.

The search box on the **orders** tab finds an order number or a customer name. On the **customers** tab it finds a customer name. Orders are listed newest first by their order date.

Customers

Step by step: add a customer.

1. Click the **customers** tab, then **Add Customer**.
2. Fill in the form and click **Add**.

Field	What to enter
Name *	The customer's name.
Type	**individual**, **business**, **wholesale** or **export**.
Phone	For example +260 ...
Email	Optional.

Field	What to enter
Address	Optional, up to a few lines.

Step by step: see, edit or delete a customer.

1. Click a customer in the list. The panel shows the name, type, phone, email and address, then **Total Spend** (all orders except cancelled), **Outstanding** (unpaid balance) and the **Order History** with each order number, date and total.
2. Click **Edit** to change the details. When you change the name, the name on all their existing orders is updated too.
3. Click **Delete** to remove them. The app asks "Delete [name]? Their orders will remain." Click OK to confirm.

Good to know. Deleting a customer does not delete their orders. The orders keep the customer's name. Customer names are not required to be unique.

Creating an order

Step by step.

1. On the **orders** tab click **New Order**.
2. Under **Customer**, choose a customer from the list, or click **New** and type a new customer's name. If you have no customers yet, the name box is shown straight away. A customer created this way has the type individual and only a name; you can add details later.
3. Set the **Date** (today by default). Optionally set a **Due Date (opt.)**, the day payment is expected.
4. Under **Line Items** fill in, for each line: **Description**, **Qty**, **Unit** (default kg) and **Price** (per unit). Click **+ Add line** for more lines. Click the small cross to remove a line (you cannot remove the last one).
5. Optionally fill in **Tax %** and **Discount Amount**.
6. Check the grey box: it shows the **Subtotal** and **Total** as you type.
7. Click **Create Order**.

The new order opens with the status **Draft**.

How the total is worked out. Subtotal is the sum of quantity times price for every line. Total is subtotal plus tax (subtotal times tax % divided by 100) minus the discount amount. It never goes below zero. The server repeats this calculation and its answer is the one saved.

> **Tip:** Type the **Description** of each line exactly like the stock item it comes from (for example "Broiler Starter Feed" or "Live broilers"). When you fulfil the order, the lines are matched to your Inventory items by name and taken out of stock.

Order numbers. Every order gets a number in the form **ORD-YYYYMM-NNN**, for example ORD-202610-007. YYYYMM is the year and month of the **order date** you chose, and NNN counts up from 001 within that month.

Limits and messages.

Message	When you see it
Choose a customer or add a new one	No customer selected and no new name typed.
An order needs between 1 and 100 lines	No lines, or more than 100.

Message	When you see it
Every line needs a description	A line has a quantity or price but no description. (The form drops lines with no description before sending.)
"[line]": quantity must be greater than zero	A line quantity is 0 or negative.
"[line]": price cannot be negative	A line price is below 0.
Tax must be between 0 and 100 %	Tax % outside that range.
Discount cannot be negative	A negative discount.
The due date is before the order date	Due date earlier than the date.
Could not allocate an order number — please try again	Two orders were created at the same moment. Click **Create Order** again.

The order status flow

An order moves in one direction:

Draft to **Confirmed** to **Fulfilled**. A Draft or a Confirmed order can instead be **Cancelled**.

Status	Meaning	Buttons you see
Draft	Created, not yet agreed.	**Confirm**, **Record Payment**, **Cancel**
Confirmed	The customer has agreed.	**Mark Fulfilled**, **Record Payment**, **Cancel**
Fulfilled	Goods delivered or service done. Final.	**Record Payment** (if a balance remains)
Cancelled	Dropped. Final. It cannot receive payments.	None

Any other jump is refused with a message such as "A draft order cannot become fulfilled".

> **Watch out:** A fulfilled order cannot be cancelled or edited (other than notes). Fulfil only when the goods have really left. If you make a mistake, fix it with a Finance edit and an Inventory adjustment.

What Mark Fulfilled does. Two things happen on the server, once only (never again if you later change a note):

1. **Finance:** one income entry is added with the category **Sales Income**, the full order total as the amount, today's date as the date, the order number as the reference and the description "Sales order [number] — [customer]". The note is "Auto-recorded from sales". It is not added when the order total is zero. The entry is not linked to a production cycle.
2. **Inventory:** every order line is taken out of stock (Stock Out), matched by the line description to an item name. A line with no matching item is skipped. If stock is lower than the line quantity, only what is there is taken and the shortfall is noted. The reference is the order number and the destination is the customer.

> **Watch out:** The income is posted when you **fulfil**, not when the customer pays. Recording a payment does not create a second income entry. So you never need to type a sale in Finance when it is already a sales order that you fulfil.

Recording payments

Step by step.

1. Open the order and click **Record Payment** (green). It shows while the order is not fully paid and not cancelled.
2. The window shows the **Outstanding** amount. The **Amount Received** is filled with the full balance. Change it for a part payment.

3. Optionally type a **Note** (for example "Cash", "Mobile money", "Bank transfer").
4. Click **Record**. The button is grey while the amount is zero.

Each payment is saved with its date (today), amount, note and the name of the person who recorded it.

Rules.

- A part payment is allowed. You can record as many as you need until the balance is zero.
- A payment cannot be more than the balance: the message is "That is more than the balance due (N)".
- A payment must be above zero: "The payment must be greater than zero".
- A cancelled order cannot receive payments: "A cancelled order cannot receive payments".
- You cannot delete or edit a payment once saved.

Payment statuses.

Status	When
Unpaid	Nothing received and the order is not late.
Partial	Something received, balance remains, and the order is not late.
Paid	The amount received equals or exceeds the total (and the total is above zero).
Overdue	There is a **due date** that is earlier than today, the order is not cancelled, and the order is not fully paid (including part payments).

An order without a due date can never become Overdue. A cancelled order never shows Overdue.

The order panel: invoice, payments and notes

Click an order to open it. The top shows the order number, customer and date, the total, the order status, the payment status and the **Outstanding** balance in red. There are three tabs.

- **invoice**: a printable-style statement with the order number, **Date**, **Due** date, the customer, a table of **Description**, **Qty**, **Unit**, **Price** and **Amount**, then **Subtotal**, **Tax (n%)**, **Discount**, **Total**, **Paid** and **Balance Due**.
- **payments**: a **Payment Summary** (**Order Total**, **Amount Paid**, **Balance Due**) and a list "Payments received (n)" with date, note, who recorded it and the amount. When nothing has been paid it says to use the **Record Payment** button.
- **notes**: a free text box. Whatever you type is saved when you click outside the box.

The invoice shown here is a view on screen. The Sales page has no separate PDF button; to print it, use your browser's print function.

Good to know.

- Search, summary figures and the customer's own panel all update as soon as you save.
- The page loads up to 5,000 of your newest orders.
- After you fulfil an order, Finance and Inventory are refreshed so you can see the income and the stock change at once.

If something goes wrong.

- *"Sales could not be loaded"* with **Try again**: a connection problem. Click it.
- *An error banner appears at the top of the list* (for example "Permission denied: you need edit access to sales"): your role does not allow that action. Click the small cross to hide it.
- *The goods did not leave stock after Fulfil.* The line description does not match any Inventory item name, or the item was empty.

Trade & Export

Trade & Export Documents

What it is for. When you sell a larger consignment to a buyer, especially across the border, you need paperwork: a contract, a commercial invoice, a packing list and often certificates. This page keeps your **buyers**, your **trade contracts**, and the **documents** for each contract, and makes a PDF of each one for you.

Before you start.

- The buyers, contracts and documents are saved to your company account, so your team shares them.
- Buyers and contracts follow the **Sales** permission: you need "create" to add a buyer or contract and "edit" to move a contract along.
- Documents follow the **Trade & Export** permission: "create" to make documents, "edit" to change them and "delete" to remove them. By default the Sales Manager and the Director have these; the Finance Manager can only view.
- Add a buyer first, so the contract can name them.

> **Watch out:** The PDFs are prepared by AGRINUXES from your data. They are working documents, not official certificates. A phytosanitary certificate, a veterinary health certificate or a certificate of origin only has legal force when the issuing authority (for example the Plant Quarantine and Phytosanitary Service, the Department of Veterinary Services, the Chamber of Commerce or ZRA) issues it. Draft PDFs print a notice that they have not been submitted to or issued by the authority.

What you will see at the top. A heading, a refresh button, and five cards:

Card	Meaning
Open contracts	Contracts that are not Fulfilled or Cancelled.
Contract value	Total value of all contracts except Cancelled, in ZMW.
Export contracts	Contracts whose buyer's country is not Zambia.
Documents issued	Documents with the status Approved.
Documents in draft	Documents that are not yet Approved (Draft, Submitted or Rejected).

Below are three tabs: **Contracts**, **All documents** and **Buyers**.

Buyers

Step by step: add a buyer.

1. Click the **Buyers** tab, then **Add buyer** (the form is already open when you have no buyers).
2. Fill in the fields below and click **Save buyer**. A green message says "Buyer added."

Field	What to enter
Buyer / company name *	Required.
Type (drop-down)	Company, Exporter, Processor, Supermarket, Trader, Ngo, Government or Individual. Default is Exporter.
Contact person, **Phone**, **Email**	How to reach them.
Street address, **Town / city**	Their location.
Country *	Required. Default **Zambia**.
Payment terms	For example "30 days" or "cash on delivery".

The list shows each buyer with name, type, place, contact, phone and payment terms. A green **Verified** tag appears next to buyers the platform has verified; you cannot set that yourself. The page has no button to edit or delete a buyer.

> **Tip:** The buyer's **Country** decides what paperwork the contract needs. A buyer outside Zambia makes the contract an export with the full certificate checklist. A buyer in Zambia only needs an invoice and a packing list.

Contracts

Step by step: create a contract.

1. On the **Contracts** tab click **New contract**.
2. Fill in the form: **Commodity** (for example "Soya beans, Grade A"), the buyer (or "No buyer yet"), **Quantity**, **Unit** (default kg), **Price per unit (ZMW)**, **Deposit %**, a delivery date, and **Payment terms**.
3. Click **Create contract**. A green message says "Contract created." The contract starts as **Draft**.

The contract value is quantity times price, worked out for you. The contract table shows **Commodity**, **Buyer**, **Quantity**, **Value**, **Delivery**, **Status**, **Docs** (approved documents out of all documents) and **Open**.

Contract statuses.

Status	Meaning
Draft	Being prepared.
Offered	The offer is with the buyer.
Accepted	The buyer agreed.
In Progress	Goods are being delivered.
Fulfilled	Done.
Disputed	There is a disagreement.
Cancelled	Dropped.

Click a contract row to open it. In the contract screen you see the buyer, the quantity and price, the value and payment details, and **Move contract to:** with buttons for the next steps:

From	You can move to
Draft	Offered
Offered	Accepted, Cancelled
Accepted	In Progress, Cancelled

From	You can move to
In Progress	Fulfilled, Disputed
Disputed	Fulfilled, Cancelled
Fulfilled, Cancelled	(nothing; these are final)

Two more buttons track money: **Mark deposit paid** (shown when a deposit percentage was set and is not yet paid) and **Mark fully paid**. They only tick a box on the contract. They do **not** create income in Finance.

> **Watch out:** A trade contract is not a sales order. Moving a contract to Fulfilled or marking it paid does not post income to Finance and does not take stock out of Inventory. If you want the sale in your books, also record it as a Sales order (and fulfil it) or add the income in Finance by hand, but only one of the two, not both.

> **Note:** Fulfilled, Disputed and Cancelled contracts, and verified buyers, are counted in your Credit Profile (see the Credit chapter). Keeping contract statuses honest and up to date helps your score.

The top buttons of a contract.

- **Contract PDF**: makes a "Produce Sale & Supply Contract" PDF (parties, goods and price, delivery and payment, terms) and opens it in a new tab. It carries a reference like TC-2026-1A2B3C4D.
- **Generate document pack**: creates every required document that is missing for this contract and makes all their PDFs. A message tells you how many PDFs and how many were newly created.

If your browser blocks pop-ups, allow them for AGRINUXES, or the PDF will not open.

The document checklist

Each contract shows a **Document checklist** with a coloured dot for every document: grey (not created), amber (draft or submitted), green (approved) and red (rejected). Above it a line says "N required documents missing" in amber, or "All required documents present" in green.

Which documents are required.

Situation	Required documents
Export of plant products	Commercial invoice, Packing list, Phytosanitary certificate, Certificate of origin, Customs declaration
Export of animal products (the commodity name contains a word such as cattle, goat, sheep, pig, beef, chicken, poultry, broiler, egg, fish, tilapia, honey, milk, dairy, hide, skin, livestock or chick)	Commercial invoice, Packing list, Veterinary health certificate, Certificate of origin, Customs declaration
Domestic sale (buyer in Zambia)	Commercial invoice, Packing list only
No buyer chosen yet	The export list above

Other types you can add yourself (marked **optional**): **Fumigation certificate**, **Other**, and any of the above that are not required.

Step by step: create one document.

1. In the checklist find the document and click **Create & render**. Or use **Add another document type…**, pick a type and click **Create**.

2. The document is created from the contract (commodity, quantity, unit, destination country), numbered and rendered as a PDF. A message says, for example, "Commercial invoice created and rendered."

Document numbers have the form PREFIX-YEAR-NNNN, counted per type and year: **INV** (invoice), **PKL** (packing list), **PHY** (phytosanitary), **COO** (certificate of origin), **VHC** (veterinary health), **FUM** (fumigation), **CUS** (customs), **DOC** (other). Example: INV-2026-0001.

What each row offers once the document exists.

- A dark **PDF** button to open the file.
- A refresh button to regenerate the PDF.
- **Details** to edit the document.
- A bin button to delete it (the app asks "Delete [number]?").

Document details (the editor).

Field	Notes
Document number	Prefilled; you can change it.
Status	**Draft**, **Submitted**, **Approved** or **Rejected**. You set it yourself as the paperwork moves.
Issuing authority	Prefilled for certificates with the usual Zambian authority; you can edit it.
Commodity, **Quantity**, **Unit**, **Destination country**	Copied from the contract.
Issue date, **Expiry**	The expiry must be after the issue date.
Additional declaration / notes (printed on the document)	Appears on the PDF.

Click **Save & regenerate PDF**. A green message says "[number] saved and PDF regenerated."

All documents. This tab lists every document across all contracts with **Number**, **Type**, **Contract**, **Destination**, **Status**, **Issued**, **Expires** and a **PDF** link (or "not rendered").

If something goes wrong.

- *Failed to load*: a red message at the top with the reason. Click the refresh button.
- *Expiry date must be after issue date*, *Quantity cannot be negative*, *Commodity is required*: fix the field and save again.
- *A "Permission denied" message*: your role does not have the right (Sales for buyers and contracts, Trade & Export for documents).

Finance

Finance (income and expenses)

What it is for. Finance is your farm's money book: a list of every shilling in (income) and out (expense), with dashboards that show profit, the biggest costs and the month-by-month picture. Lenders and your credit profile read from this same ledger.

Before you start.

- The ledger is saved to your company account, shared by your team on every device.
- You need **view** to see it, **create** to add an entry, **edit** to change an entry and **delete** to remove one.
- With no access you see a padlock and "You do not have access to Finance".
- Most of your costs and income arrive automatically from production, sales and processing. Check the "Automatic entries" section before you type anything.

What you will see.

- A top bar with the heading **Finance**, a count such as "46 transactions" and, in amber, "N syncing" while automatic entries are still being delivered.
- A **period** drop-down: **Last month**, **Last 3 months** (the default), **Last 6 months**, **Last 12 months** and **All time**. It filters by the date of each entry, counting back from today.
- Two buttons, green **Income** and red **Expense** (grey until the ledger has loaded).
- Four tabs: **dashboard**, **income**, **expenses** and **all**.

Adding an income or an expense

Step by step.

1. Click **Income** or **Expense**.
2. Choose a **Category** (the lists are below).
3. Type a **Description** (required), for example "Starter feed – 50 bags".
4. Type the **Amount** (required, above zero).
5. Check the **Date** (today by default).
6. Optionally choose a **Production Cycle** to link the entry to (the list shows your active and completed cycles with their status).
7. Optionally type a **Reference #** (receipt or invoice number) and **Notes**.
8. Click **Save**. The button is grey until there is a description and an amount above zero.

Expense categories.

Category	Use it for
Feed & Fodder	Feed, hay, silage, supplements
Medicines	Vaccines, drugs, vet fees
Seeds	Seed and seedlings
Fertiliser	Compound D, urea, lime and similar
Labour	Wages, casual workers, salaries
Equipment	Tools and machines bought
Transport	Delivery, fuel for hauling, hire of trucks
Utilities	Electricity, water, fuel for generators
Marketing	Adverts, signs, market fees
Repairs	Maintenance and repairs
Other Cost	Anything that does not fit above

Income categories.

Category	Use it for
Sales Income	Money from selling produce, animals or products
Grant / Subsidy	Grants, subsidies, programme support in cash
Other Income	Anything else received

Reading the tabs

dashboard. Four cards (**Total Income**, **Total Expenses**, **Net Profit**, **Margin**) for the chosen period; a **Monthly Overview** with a green bar for income and a red bar for expense for each of the latest six months in the period, and the net on the right; and an **Expense Breakdown** with the top eight categories, each with a bar, amount and share of all expenses. When the period has no entries it says "No transactions yet." and "Click + Income or + Expense to get started."

income / expenses / all. A list, newest first. Each row shows the category icon, the description, the category and date, and the amount (green with a plus for income, red with a minus for expense). Click a row to open it and see the linked **Cycle**, the **Ref #** and the notes, with **Edit** and **Delete** links.

If a period has no entries the list says "No transactions in this period."

Editing and deleting

Edit: open the row, click **Edit**, change the fields and click **Save Changes**. This needs "edit" permission. The type (income or expense) cannot be changed; delete and re-enter instead.

Delete: open the row and click **Delete**. This needs "delete" permission, which by default only the Director has.

> **Watch out:** **Delete** removes the entry at once, without asking you to confirm. Check the row before you click. You can edit and delete automatic entries too. A deleted automatic entry does not come back by itself.

Automatic entries: what arrives without you typing

To avoid double entry, these things post to Finance for you. They show in the list with a note such as "Auto-recorded from production engine".

What you do	Entry in Finance
Log a **purchase** event in production with a total cost	An **expense**. The category is guessed from the item's category text: feed, fodder or silage gives **Feed & Fodder**; medicine, vet, vaccination or treatment gives **Medicines**; seed gives **Seeds**; fertiliser gives **Fertiliser**; labour, wage or salary gives **Labour**; equipment or machinery gives **Equipment**; transport or delivery gives **Transport**; utility, electric, water or fuel gives **Utilities**; repair or maintenance gives **Repairs**; anything else gives **Other Cost**. Linked to the cycle.
Log a **treatment** or **vaccination** event with a cost	An expense in **Medicines**.
Log a **stocking** event (for example fingerlings) with a total cost	An expense in **Other Cost**.
Log a **direct sale** (sale) event with a total value	An **income** in **Sales Income**.
Fulfil a Sales order	An income in **Sales Income** for the full order total, dated the day you fulfil.
Complete a Processing batch	An expense in **Other Cost** for the batch cost.

A **honey harvest** event adds honey to Inventory but does **not** post income. A **harvest** or an egg or milk collection adds stock only. Record the money when you sell.

Each automatic entry has a unique key, so the same event is never posted twice, even if your connection drops and the app tries again. While an entry is waiting, the Finance header shows "N syncing" and the entry appears at once on screen; it is replaced by the saved copy when delivered.

> **Watch out:** An automatic entry is only accepted if your login may add to Finance, or may create or edit the page it came from (production, inventory or sales). If it is refused, it is discarded and not retried. Ask your Director for the right permissions and add that one entry by hand.

> **Tip:** Linking an entry to a **Production Cycle** lets you see cycle-level profit in the Reports pages and on the Dashboard enterprise cards.

Good to know.

- The Dashboard uses the ledger for all-time totals; this page uses the period you choose.
- A weak connection never loses entries. Entries wait on your device and are delivered later (up to 20 tries).
- The ledger loads up to the latest 10,000 entries.

If something goes wrong.

Message or sign	What it means
The ledger could not be loaded with **Try again**	A connection problem. Click **Try again**.
You do not have access to Finance	Your role has no Finance view. Ask your Director.
description is required	Fill in the description.
amount must be greater than zero	The amount must be above 0.
date is required	Choose a date.
category "x" is not valid for income (or expense)	The category does not fit the type. Choose from the list.
Transaction not found	It was already deleted. Reload.
Permission denied: you need edit access to finance (or create/delete)	Your role does not allow this.

Credit Profile and lender sharing

The Credit Profile

What it is for. A bank or lender wants proof that a farm is a good risk. The Credit Profile builds that proof from the records you already keep in AGRINUXES: a score out of 100, a letter band from A to E, and the evidence behind every point. You decide who sees it, for how long, and you can cancel access at any time. Nothing is self-declared; the app counts only what is recorded.

Before you start.

- The Credit Profile is for farm accounts. You need **view** access to the Credit Profile page to see it, **create** access to give a lender a link, and **delete** access to cancel a link. By default the Director has all three and the Finance Manager can view and create.
- In the page itself, the sharing form is only shown to a **Director** or a **Finance Manager**. Anyone else sees "Only a director or finance manager can share the credit summary."
- The score is only as good as your records. Read "How to improve your score" below.

Step by step: look at your score.

1. Click **Credit Profile** in the left-hand menu.
2. Wait for "Computing your credit summary…".
3. Read the score and band at the top, then the five factors, then the detail cards.
4. Click the refresh button (top right) to recalculate after you have added records.
5. Click **PDF** to make a printable copy (see "The PDF" below).

What you will see.

- A round **score gauge** showing the score "out of 100".
- A large **band letter** (A to E) with a short description, your farm name, district and province, and the "as of" date.
- If your file is thin, an amber note: "Thin file: fewer than 3 months of records. The score becomes reliable as the farm keeps records."
- Five **factor bars**. Each shows the points earned out of the points possible (for example "14.5 / 25") and one line of evidence.
- Detail cards: **Farm**, **Financial performance**, **Monthly revenue, last 12 months** (a bar chart; or "No revenue entries in the last 12 months."), **Trading history**, and **Verification & support network** (ticks for what is in place).
- A footnote saying the summary was generated from your AGRINUXES records, is decision support only and uses five weighted rule-based factors (25 / 25 / 20 / 15 / 15).

How the score is worked out

The score is the total of five factors. The weights add up to 100.

Factor	Weight	What it measures
Record-keeping consistency	25	How regularly you keep production records.
Profitability	25	Whether your farm makes more than it spends.
Trading history	20	Contracts you have fulfilled and your buyers.
Tenure & scale	15	How long you have been on the platform and how big you are.
Verification & support network	15	Consent, extension officer, programmes, certificates, insurance, loan history.

Here is exactly how each factor earns points.

Record-keeping consistency (up to 25)

- **Active months (up to 20 points).** The app looks at the last 12 months and counts how many have at least one production record. Each such month is worth about 1.7 points; 12 out of 12 gives the full 20.
- **Recency (up to 5 points).** If your last production record is 14 days old or less you get 5 points. If it is 15 to 45 days old you get 2.5. If it is older, or you have none, you get 0.

The evidence line reads like "4 of last 12 months with production records (31 records); last record 5 days ago", or "No production records yet".

Profitability (up to 25)

If the app finds **no costs** at all, this factor is 0 and the evidence says "No batch financials or ledger costs recorded".

The basis. If you have recorded at least one **expense** in the Finance ledger in the last 12 months, the Finance ledger is used, and each **month** counts as one unit. Otherwise the older batch records are used, where each **batch** is one unit. Keeping your costs in Finance is the simplest way to be scored.

The factor is built from three parts:

- **Return on cost (up to 12.5 points).** Profit divided by costs over the last 12 months, as a percentage. A return of 60% or more earns the full 12.5. A return of 30% earns half. Zero or negative earns nothing.
- **Share of profitable units (up to 7.5 points).** The share of months (or batches) where income was more than cost. If every month with costs was profitable you get the full 7.5.
- **Revenue trend (up to 5 points).** The last six months of revenue compared with the six months before. A rise of 50% or more earns the full 5; no change earns 2.5; a fall of 50% or more earns 0. If there is no income in the earlier six months, the app uses the neutral 2.5.

The evidence line reads like "ROI 22% and margin 18% over 12 months; 1/1 months profitable".

Trading history (up to 20)

- **Contracts fulfilled (up to 10 points).** Contracts in Trade & Export with the status **Fulfilled**. Six or more earns the full 10.
- **Fulfilment rate (up to 6 points).** Fulfilled contracts divided by (fulfilled plus disputed plus cancelled). With no contracts at all, this part is 0.
- **Verified buyers (up to 2 points).** Buyers the platform has verified, across your contracts. Three or more earns the full 2.
- **Active listings (up to 2 points).** Your active marketplace listings. Three or more earns the full 2.

The evidence line reads like "2 contracts fulfilled (ZMW 54,000), 0 disputed/cancelled, 1 verified buyers".

Tenure and scale (up to 15)

- **Time on the platform (up to 6 points).** 24 months or more earns the full 6.
- **Enterprises (up to 3 points).** Three active enterprises earn the full 3.
- **Batches completed (up to 4.5 points).** Six completed batches earn the full 4.5.
- **Registered land (up to 1.5 points).** Fields registered with their area. Ten hectares or more earns the full 1.5.

Verification and support network (up to 15)

Item	Points
Data-sharing consent switched on (**Share with government & partners** in Settings)	3.75
An extension officer is assigned to your farm	3
Enrolled in a programme (active or completed)	3

Item	Points
At least one certification with status Certified	2.25
Insurance on record (a claim that is not draft or rejected)	1.5
At least one loan marked repaid and none defaulted	1.5

A defaulted loan takes 7.5 points off this factor (it cannot go below zero).

The bands

The total is rounded to a whole number and placed in a band:

Band	Score	What it tells a lender
A	80 to 100	Strong — eligible for standard terms
B	65 to 79	Good — eligible, standard monitoring
C	50 to 64	Fair — consider with collateral or group guarantee
D	35 to 49	Weak — small ticket / input-in-kind only
E	0 to 34	Insufficient history — not yet scoreable

Thin file. Your file is "thin" when you have fewer than 3 months with production records **and** there is nothing to score for profitability (no months with costs in the ledger and no batch records). A thin file can never be better than band **D**, even if the points would say A, B or C. The band text then reads "Thin file — fewer than 3 months of records; score provisional" and the amber notice appears. Recording expenses in Finance removes the thin-file limit, because it gives the app something to score.

How to improve your score

Practical steps, in order of how much they are worth:

1. **Keep your costs and income in Finance every month.** This opens the 25 points of profitability, and removes the thin-file cap. Use the automatic entries from production, sales and processing so that you do not forget any (see the chapter on how the modules talk to each other).
2. **Keep production records going, and keep them recent.** Each month with a record is worth about 1.7 points. A record in the last 14 days is worth 5 points on its own. A farm that records every month for a year earns the full 20.
3. **Make sure income is really recorded.** Fulfil your sales orders and record the sales events so that revenue shows in the ledger. A revenue trend that is rising earns up to 5 points.
4. **Aim for profitable months.** The profitable-months share is worth up to 7.5 points. A return of 60% on cost earns the full 12.5.
5. **Use Trade & Export honestly.** Mark contracts **Fulfilled** when they are done. Six fulfilled contracts earn the full 10 points. Avoid leaving contracts as disputed or cancelled: each one lowers your fulfilment rate (worth up to 6 points).
6. **Switch on data-sharing consent** in Settings (**Share with government & partners**). This is the single easiest item: 3.75 points. Only the Director can switch it.
7. **Join a programme, ask for an extension officer, get certified and insured.** Each adds points in the verification factor. A repaid loan adds 1.5.
8. **Stay on the platform.** Tenure counts up to 24 months, and registering your fields and completing cycles also helps.

9. **Never default on a loan recorded in AGRINUXES.** It costs 7.5 points.

> **Note:** This page only reads loans, insurance claims, certificates and programme enrolments that already exist on your company account. It does not have screens for adding them. Loan history and insurance appear when they have been recorded for your business (for example by a programme partner or in the vendor and programme modules). Contact your extension officer or AGRINUXES support if one is missing.

> **Note:** Some inputs of this score, such as production records, enterprises and completed batches, are read from your company account's production data. If the evidence line says there are no records but you have been logging on the farm workspace, see Part 3 — Running Production: Cycles, Stages, Events and Outputs and ask support to check that your records are reaching your company account.

Sharing with a lender

What it is for. Instead of printing a bundle of papers, you send the lender a private link. The lender opens it without needing an account. They see the same summary you see.

Before you start. You must be a Director or Finance Manager, with create access to the Credit Profile. Decide which lender, and what the purpose is.

Step by step.

1. On the Credit Profile page find the box **Share with a lender**.
2. Type the **Lender** name (required), for example Zanaco, NATSAVE, FINCA or Vision Fund.
3. Optionally type the credit officer's email or phone.
4. Check the **Purpose** (it starts as "Seasonal input loan application"; change it if needed).
5. Choose how long the link will work: **7 days**, **14 days**, **30 days** (the default), **60 days** or **90 days**.
6. Click **Create share link**.
7. A green message says "Share link created for [lender]. It expires in N days and can be revoked any time." A box titled **Send this link to the lender** shows the full link. Click **Copy** and send it by email or WhatsApp.

The link is your site address followed by a long secret code. Anyone who has the link can see the summary, so send it only to the lender.

Who has access. A list on the right shows every link you have made: the lender (and contact), the purpose, when it was created, when it expires, how many times it was opened ("opened 3×") and when it was last opened. A tag shows **Active**, **Expired** or **Revoked**. For active links there is a copy button to copy the link again, and a revoke button (a circle with a line) to cancel it.

Step by step: revoke a link.

1. Find the lender in **Who has access**.
2. Click the revoke button. The app asks "Revoke [lender]'s access?".
3. Confirm. A message says "Access for [lender] revoked." The lender's link stops working at once.

What the lender sees. The lender opens the link and sees a page headed "AGRINUXES — Farm credit summary" with "Shared by the farm for credit assessment · read-only". A line says "Prepared for [lender] · [purpose] · link valid until [date]". Below is the same report you see, and a **Print** button. The lender sees your farm's name, district and province, and the figures in the report. They do not see individual ledger entries, customers or other pages.

- The report is worked out again every time the lender opens it, so it shows your **current** records, not a frozen copy.
- Each opening is counted. You see this in **Who has access**.

If the link does not work, the lender sees:

Message	Meaning
Invalid share link	The link was typed or copied wrongly.
This share link has been revoked by the farm	You cancelled it.
This share link has expired	The days ran out. Create a new link.

Under each message the page says "Ask the farm to issue a new share link from their Credit Profile."

If something goes wrong on your side.

- *"Permission denied: you need create access to credit"*: your role cannot make links.
- *"Permission denied: you need delete access to credit"* when you revoke: the revoke button shows for Finance Managers, but cancelling a link needs delete access, which by default only the Director has. Ask the Director to revoke it, or to give you delete access.
- *"Permission denied: farm account required"*: the Credit Profile is only for farm accounts.

The PDF

Click **PDF** at the top of the page. A one- or two-page PDF opens in a new tab with the title "AGRINUXES FARM CREDIT SUMMARY", the farm name and place, the score and band, a table of the five factors with their scores, weights and evidence, then sections for **Farm**, **Financial performance**, **Trading history** and **Verification & support network**, and a closing note that it is decision support, not a credit decision. A green message says "PDF generated." If the PDF does not open, allow pop-ups for AGRINUXES.

> **Note:** The financial section of the PDF is headed "from batch financials", and the on-screen card says "batch financials", even when your figures come from the Finance ledger. If you have recorded expenses in Finance, the ledger is what is used.

Reports

Reports

What it is for. Reports turns your records into tables and charts that you can read, print and export. It has six tabs. Most of them read the Finance ledger, Inventory and Sales, which are shared by your team, and a few read device-only records (procurement, processing, health and staff), which show only what was saved on the device you are using.

Before you start.

- You need **view** access to Reports. The Production Manager, Finance Manager and Sales Manager have it by default.
- A report is only as complete as the records behind it. If a table looks empty, check the page where those records are made.

Step by step.

1. Click **Reports** in the left-hand menu (or **View Reports** on the Dashboard).
2. Click a tab along the top: **Overview**, **Profitability**, **Production**, **Inventory**, **Procurement** or **Export**.
3. On **Overview**, optionally set **From** and **To** dates to focus on a period; click **Clear** to remove them.
4. Click **Export CSV** on a table to download it as a spreadsheet file.

Exports. Reports exports **CSV** files (which open in Excel, Google Sheets and similar) and one **JSON** backup. There are no PDF or Excel downloads on this page. For a printable page, use your browser's print function.

Overview tab

- A date range (**From**, **To**, **Clear**). It applies to the cards, the top-five lists and the enterprise share below. It does not change the six-month chart.
- Eight cards: **Total Revenue**, **Total Expenses**, **Net Profit**, **Profit Margin** (green above 20%, amber above 0%, red otherwise), **Active Cycles**, **Completed Cycles**, **Inventory Value** and **Low Stock Items** (with a red count badge).
- **Financial Trend — Last 6 Months**: green and red bars per month with the net in thousands.
- **Top 5 Expense Categories** and **Top 5 Income Sources**: bars by category (shown with their internal names such as "feed" or "sale_income").
- **Enterprise Revenue Share**: income per enterprise, only for income entries linked to a cycle of that enterprise. It is hidden when there is nothing to show.

Revenue and expenses come from the Finance ledger. Fulfilled sales orders are already in the ledger, so they are not added again.

Profitability tab

This tab combines the ledger with a separate list of **production expenses**.

- Three cards: **Total Revenue** (the ledger income; the small text "Transactions + Orders" is misleading, because fulfilled orders are already in the ledger), **Total Production Costs** (production expenses plus ledger expenses) and **Net Profit** (revenue minus all costs).
- **Production Expenses**: a table and a **+ Log Expense** button. The form has **Enterprise**, **Cycle**, **Type** (**Feed**, **Vet**, **Chicks / Fingerlings / Seeds**, **Seeds**, **Fingerlings**, **Other**), **Description**, **Amount** and **Date**. All of Enterprise, Cycle, Description and Amount are needed or **Save Expense** does nothing. There is no way to edit or delete a logged expense.
- **Profitability by Enterprise**: for each enterprise, **Total Income**, **Prod Expenses**, **Other Expenses**, **Net Profit** and **Margin**, with a breakdown of the production expenses by type. Only ledger entries linked to one of that enterprise's cycles are counted.
- **Batch Profitability**: shown only when you have completed processing batches. You can type a **Selling price** per kg (starts at 28). The columns are **Batch ID**, **Input kg**, **Output kg**, **Yield %**, **Est. Revenue**, **Linked Exp**, **Net** and **Quality**.

> **Watch out:** The production expenses list on this tab is **saved on this device only** and is separate from the Finance ledger. It is subtracted from the net profit shown on this tab, so it can double-count a cost that you also have in Finance. The first time you open this tab on a device that has a cycle, four sample rows may already be listed (broiler starter feed ZMW 12,000, day-old chicks ZMW 24,000, Newcastle vaccine ZMW

1,850 and litter ZMW 2,200, total ZMW 40,050). They are examples, not your records, and they lower the net profit on this tab. For your real costs, use **Finance**; treat this tab's net profit with care and rely on the Overview tab and Finance for true totals.

Note: The Batch Profitability table reads kilogram fields that the Processing page does not save, so its input, output, yield and revenue columns usually show 0 or a dash.

Production tab

- Four chips with the number of cycles that are **active**, **completed**, **failed** and **paused**.
- **All Cycles**: **Cycle #**, **Enterprise**, **Status**, **Start**, **Days** (since start), **Stages** (done out of total), **Events** and **Records** (daily records). Button: **Export CSV**.
- **Stage Completion Heatmap**: one row per enterprise, with a numbered square for each stage of its template: green completed, amber in progress, grey pending. Hover over a square to see the stage name.
- **Event Type Breakdown**: how many events of each type were logged (for example purchase, vaccination, sale).
- **Mortality Analysis**: for cycles with mortality events: **Mortality**, **Starting**, **Rate %** (red above 5%).

Inventory tab

- Cards: **Total Items**, **Total Value**, **Low Stock**, **Categories**.
- **Stock by Category**: a bar per category with the number of items, the value and the average cost per unit.
- **Low Stock Alert (N)**: a table of items at or below their minimum with **Item**, **Unit**, **Current**, **Min**, **Deficit** (the minimum minus the current) and **Reorder Cost** (deficit times cost per unit). Button: **Export CSV**.
- **Processing Efficiency**: **Avg Yield Ratio**, **Quality Pass Rate**, **Batches Completed**, **In Progress**. See the note above: the first two read fields that the Processing page does not fill, so they usually show 0.0%.
- **Full Inventory**: **Name**, **Category**, **Qty**, **Unit**, **Cost/Unit**, **Total Value** and **Status**. Button: **Export CSV**. Status is **CRITICAL** when the quantity is zero, **LOW** when it is at or below the minimum, and **OK** otherwise.

Procurement tab

This tab reads your purchase orders and suppliers from the Procurement page, which is saved on this device only (see Part 5 — Farm Management, Intelligence and Devices).

- Cards: **Total POs**, **Pending / Ordered**, **Delivered**, **Total Spend**, **Pending Spend**, **Overdue**.
- **PO Status Breakdown**: a bar split by pending, ordered, delivered and cancelled.
- **Overdue Deliveries**: orders past their expected date and not delivered, with days overdue and value. Button: **Export CSV**.
- **Spend by Supplier**, **All Purchase Orders** (click the arrow on a row to see its lines; button: **Export CSV**) and **Supplier Ratings** (stars, number of POs and spend).

Export tab (Export Centre)

Twelve cards, each with a download button:

Card	What you get
All Transactions	The full ledger as CSV (ID, type, amount, date, category, description).

Card	What you get
Completed Cycles	Finished production cycles.
Inventory Items	Current stock levels and costs.
Staff & Time Logs	Staff joined to their time entries.
Purchase Orders	All procurement orders.
Supplier Directory	Suppliers and ratings.
Sales Orders	Customer orders with totals and status.
Activity Log	The device activity history.
Processing Batches	Batch records (weights are blank for batches made on the Processing page).
Crop Rotation History	Field crop history by season.
Animal Health Records	Two files: vaccinations and treatments.
Full Backup	One JSON file with everything saved on this device, including the device-only pages.

At the bottom a line says **Last backup:** with the date and time of your last Full Backup, or "Never".

> **Tip:** Press **Download Backup** on the Full Backup card regularly (for example every Friday) and keep the file safe. It is the only protection for the pages that are saved on this device only: Processing, Staff & Labour, Procurement, Animal Health and others. The ledger, stock and sales are already safe in your company account.

> **Note:** A card downloads nothing when its list is empty. In the "All Transactions" file the cycle column may be blank even for entries linked to a cycle.

If something goes wrong.

- *A download does not start:* your browser may be blocking it; allow downloads for AGRINUXES. If the list is empty, nothing is downloaded.
- *Numbers differ between the Dashboard and Reports:* the Dashboard is all-time. Reports Overview follows its date range, and the Profitability tab subtracts the device-only production expenses.

How the modules talk to each other

AGRINUXES saves you from typing the same fact twice. Here is the whole picture in plain words.

```
PRODUCTION (Part 3)
  purchase event ..... expense in FINANCE  (+ stock in INVENTORY if "add to inventory"
is ticked)
  treatment / vaccination ... expense in FINANCE  (Medicines)
  stocking ................. expense in FINANCE  (Other Cost)
  direct sale event ......... income in FINANCE   (Sales Income)
  harvest sent to Inventory . stock in INVENTORY
  egg / milk / honey ........ stock in INVENTORY  (Table Eggs / Fresh Milk / Honey)

SALES
  order fulfilled ........... income in FINANCE   (the full order total, Sales Income)
                              + stock out of INVENTORY (each line, matched by name)
  payment recorded .......... stays inside the order only (no new income)

PROCESSING
  batch in progress ......... stock out of INVENTORY (inputs)   [see the warning in the
Processing chapter]
  batch completed ........... stock in INVENTORY (finished goods)
```

```
                              + expense in FINANCE (batch cost, Other Cost)

TRADE & EXPORT
  contract / documents ...... nothing is posted to FINANCE or INVENTORY

FINANCE ..................... feeds the DASHBOARD, REPORTS and the CREDIT PROFILE
INVENTORY ................... feeds the DASHBOARD and REPORTS
```

Three things to remember:

1. **Automatic entries use a unique key.** The same event is never posted twice, even if your connection drops and the app tries again.
2. **Items match by name** (ignoring capital letters, spaces and punctuation). A harvest of "Maize" and a sales line "Maize" meet in the same stock item. "Maize" and "Maize grain" do not.
3. **An automatic entry needs permission.** If the login that triggers it may not add to Finance or Inventory, the entry is discarded and not retried.

Do not enter twice: a checklist

Before you type something into Finance or Inventory, ask: is it already there?

You did this	It is already recorded, so do NOT also...
Logged a **purchase** event with a total cost in production	Add the same cost as an **Expense** in Finance.
Ticked **add to inventory** on that purchase	Add a **Stock In** for the same goods in Inventory.
Logged a **vaccination** or **treatment** event with a cost	Add a Medicines expense in Finance.
Logged a **stocking** event with a total cost	Add that cost in Finance.
Logged a **direct sale** event in production	Create a sales order for it, or add Sales Income in Finance. Choose one place.
Fulfilled a sales order	Add **Sales Income** in Finance, or a **Stock Out** in Inventory for those lines.
Recorded a payment on an order	Add income in Finance (the income was posted at fulfilment).
Completed a processing batch	Add the finished goods as **Stock In**, or the batch cost as an expense.
Logged an **egg**, **milk** or **honey** event	Add that stock again in Inventory.
Sent a **harvest** to Inventory	Add that harvest again as a Stock In.

Things that are **not** automatic, which you must enter yourself:

- Money received for a sale that is **not** a sales order or a production sale event, grants, and other income.
- Wages, rent, electricity and other overheads (use Finance).
- Using feed or medicine from stock every day (use **Stock Out** in Inventory, or an Adjust after a count).
- Stock coming from outside production (a delivery not logged as a purchase event).
- Honey income, and all income from a Trade & Export contract.
- Raw materials used by a processing batch (see the warning in the Processing chapter).

> **Tip:** If you are not sure whether something was posted, search for it. In Finance open **all** and look for the description or reference. In Inventory open the item's **movements** tab. An automatic entry carries a note such as "Auto-recorded from production engine".

Worked example: a month on a small broiler farm

This is an example with invented numbers for a farm near Chongwe. It shows how one month of activity moves through the pages. It is not a real customer.

Setup. Mrs Banda keeps 300 broilers. Her Director login sees everything. Her Finance ledger is empty for the month and she has Inventory items "Broiler Starter Feed" (unit: bag, minimum 10, cost per unit ZMW 420) and "Live broilers" (unit: bird).

Day 1: buy feed and log it in production.

1. In **Production**, she opens her broiler cycle and logs a **purchase** event: item "Broiler Starter Feed", quantity 40, unit bag, unit cost 420, total cost 16,800, category "Feed", and ticks **add to inventory**.
2. Result in **Finance**: one expense of ZMW 16,800 in **Feed & Fodder**, linked to the cycle, with the note "Auto-recorded from production engine".
3. Result in **Inventory**: "Broiler Starter Feed" rises by 40 bags, with a movement "Purchase logged in production". She did not type anything in Finance or Inventory.

Day 1 to 35: other costs and feeding.

1. She logs a **vaccination** event with a cost of ZMW 1,200: Finance gets a **Medicines** expense of 1,200.
2. She logs a **stocking** event with a total cost of ZMW 5,400 for the day-old chicks: Finance gets an **Other Cost** expense of 5,400.
3. Each week she opens the feed item and records a **Stock Out** of 10 bags with the note "Week 1 feeding", and so on. The stock falls; Inventory shows **Low** when it reaches 10 bags or fewer. The Dashboard **Inventory Items** card shows "1 low stock".

Day 35: sell the birds.

1. In **Sales** she clicks **New Order**, clicks **New** to add the customer "Chongwe Butchery", sets the due date 14 days ahead, and enters one line: description "Live broilers", quantity 300, unit bird, price 95. The total is ZMW 28,500. The order is **ORD-202611-001** (or whichever month she dates it), status **Draft**.
2. She clicks **Confirm**, then, when the birds are loaded, **Mark Fulfilled**.
3. Result in **Finance**: an income of ZMW 28,500 in **Sales Income**, dated that day, description "Sales order ORD-... — Chongwe Butchery". Result in **Inventory**: "Live broilers" is reduced by 300 birds (she had added the birds to stock when she sent the harvest to Inventory).

Day 36 to 45: payments.

1. The butcher pays ZMW 15,000 in mobile money. She opens the order, clicks **Record Payment**, types 15,000 and the note "Mobile money", and clicks **Record**. The payment status becomes **Partial** and **Outstanding** shows ZMW 13,500.
2. Nine days later, still before the due date, he pays the balance. She clicks **Record Payment** (the amount is pre-filled with 13,500) and **Record**. The status becomes **Paid**. If the due date had passed with the balance still open, the status would have read **Overdue** in red.
3. Nothing new appears in Finance for these payments: the income was posted at fulfilment.

End of the month: read the picture.

1. **Finance** (period **Last month** or **Last 3 months**): total income 28,500; total expenses 23,400 (16,800 + 1,200 + 5,400); **Net Profit** 5,100; **Margin** 17.9%. The **Expense Breakdown** shows Feed & Fodder at 72% of costs.
2. **Dashboard**: **Total Revenue** ZMW 28,500, **Total Expenses** ZMW 23,400, **Net Profit** ZMW 5,100 with the word **Surplus**, **Profit Margin** 17.9% (amber, since it is below 20%). The **Revenue vs Expenses** chart shows this month's bars, and **This Month Profit** shows 5,100.
3. **Credit Profile** (refresh it): because there are expenses in the ledger, the app judges profitability by month. This one month is profitable, so the profit factor gains points: about 0.36 of the return-on-cost part (return on cost is 22%), all of the profitable-months part, and the neutral half of the trend part, roughly 14 to 15 of the 25 points. The "thin file" note disappears because there is something to score, though the band stays low until she has more months of production records, more fulfilled contracts and the other items in the verification factor. If she keeps this up month after month, her record-keeping and tenure points grow too.

What she did not do: she did not type the feed purchase in Finance as well as in production, did not add the sale in Finance after fulfilling the order, and did not add the 300 birds out of Inventory by hand.

Part 5 — Farm Management, Intelligence and Devices

How to read this Part

This Part covers three groups of pages in the farm workspace: the **Farm Management** section, the **AI & Intelligence** section (which also holds the device and sensor pages) and the **Marketplaces** section as a farm user sees it.

These pages are different from the ones in Parts 3 and 4. Production, Inventory, Sales and Finance are saved to your company account. Almost every page in this Part is **saved on this device only**. Please read the next table before you rely on any page.

> **Watch out:** Many pages in this Part show **sample data** the first time you open them (sample staff, sample ponds, sample alerts, sample providers). The sample data is there so that you can see how the page works. It is not your data. Delete it or ignore it, and do not make decisions from it.

What "saved on this device only" means

- The records are kept inside the web browser you are using, on that one phone or computer.
- Other people in your company do **not** see them. A second phone, or the same phone with a different browser, will show a blank or sample page.
- If you clear the browser's data, or reinstall the browser, the records are lost.
- They are **not** backed up automatically. Use **Backup & Restore** (see Part 1 — Getting Started and Your Account) to download a backup file and to restore it on another device.

Where each page keeps its records

Page	Saved where	Real data or sample data?
Notifications	This device (reads the alert lists of the device pages)	Shows only what the device pages have saved
Animal Health	This device only	Records you type; sample records on first open
Staff & Labour	This device only	Records you type; 3 sample staff on first open
Procurement	This device only	Records you type; sample suppliers and orders on first open
Requisitions	This device only	Records you type; 4 sample requests on first open
Activity Log	This device only	**Sample entries only** (nothing writes real entries)
Crop Rotation	This device only	Records you type; sample fields and history on first open
Smart Engine	Reads company Finance, Inventory and Production, plus device pages	Calculated from your data and fixed norms
AI Insights	Reads company Production	Rules and fixed reference figures, not a learning model
Financial AI	Reads company Finance; the Loans tab is this device only	Real Finance figures; sample loans on first open
Smart Vision	This device only	**Simulated** (random sample answers)
Weather	**Company account**	**Live** forecast and satellite data

Page	Saved where	Real data or sample data?
Sustainability	This device only	Records you type; sample carbon and water rows
Smart Devices, Water Mgmt, Aquaculture, Poultry Houses, Energy, Soil Depth	This device only	Sample devices; readings are **simulated**
Automation	This device only	You press **Run** yourself; nothing runs automatically
Device Gateway, Farm Gateway	This device only	Demonstration screens
Cold Chain	This device only	Part manual entry, part sample
AgriFood Market, AgriSupply, AgriServices	This device only	Sample listings plus your own listings
Agro Dealers, Equipment Hire, Vet Services	Live provider list from the server when available; your own listing is this device only	Sample providers when the server cannot be reached

Who sees these pages

Each page appears in the left menu only if your account may use it. The owner and company administrators see everything. Other team members see a page only when their permissions include the matching area:

Pages	Permission area needed
Animal Health	Biosecurity & Vet
Staff & Labour	Human Resources
Procurement, Requisitions	Procurement
Crop Rotation	Daily Planner
Smart Engine, AI Insights	Smart AI Engine
Financial AI	Financial Management
Smart Vision	Production
Sustainability	Reports & BI
Weather	Weather
Smart Devices, Water Mgmt, Aquaculture, Poultry Houses, Energy, Soil Depth, Automation, Device Gateway, Cold Chain, Farm Gateway	Devices
AgriFood Market, AgriSupply, AgriServices, Agro Dealers, Equipment Hire, Vet Services	Marketplace
Notifications, Activity Log	Everyone with the farm workspace

See Part 1 — Getting Started and Your Account for how the owner gives permissions to team members.

Notifications

Notifications Centre

What it is for. One list of the alerts raised by your device pages (Aquaculture, Water, Poultry, Energy, Soil and Devices). You can filter the list and mark alerts as resolved. The page is called **Notifications Centre** and its subtitle says "Aggregated alerts from all IoT modules".

Before you start. The Notifications Centre does not create alerts. It only collects the alerts that the device pages have already saved on this device. If you have never used the device pages, the list is empty. Cold Chain, Weather and Smart Devices alerts are not collected here.

Step by step

1. In the left menu, under **Farm Management**, click **Notifications**. You can also click the bell icon at the top of the screen.
2. Look at the four tiles at the top: **Critical**, **Warning**, **Info** and **Resolved today**. Click a tile to filter the list to that kind of alert.
3. To narrow the list yourself, use the severity buttons (**all**, **critical**, **warning**, **info**), the module drop-down (**All modules**, **Aquaculture**, **Water**, **Poultry**, **Energy**, **Soil**, **Devices**) and the status drop-down (**All statuses**, **Unresolved**, **Resolved**).
4. When you have dealt with a problem, click **Resolve** on its card. The card turns pale and shows a **Resolved** badge.
5. Click **Refresh** to read the saved alerts again (for example after you resolved something on a device page).
6. Click **Clear Resolved** to delete every resolved alert permanently. This button appears only when at least one alert is resolved.

What you will see

Item	Meaning
Source badge	Which device page raised the alert (for example Aquaculture)
Severity badge	CRITICAL (red), WARNING (amber) or INFO (blue)
Title and detail line	What went wrong and the reading or message
Time	How long ago (just now, 5m ago, 3h ago, 2d ago)
Footer	"Showing X of Y total alerts"

Good to know

- The page opens with the **Unresolved** filter on, so you see only open alerts.
- **Resolved today** counts resolved alerts whose own time stamp is today. It is not the time you clicked **Resolve**.
- The red number next to **Notifications** in the left menu counts all unresolved alerts. It is refreshed when you click **Notifications**.
- Resolving an alert here also marks it as resolved on the device page it came from, and the other way round (press **Refresh**).
- Some titles read in a general way, such as "Alert on tank", because the device pages store their alerts with slightly different details. The meaning is still visible in the detail line.
- Sample alerts shown on a device page reach the Notifications Centre only after that page has saved its data on this device, for example after you resolve an alert or change something there.

If something goes wrong

- "All clear — no active alerts" with "No alerts match the current filters." means nothing matches. Set the status filter to **All statuses** and the module filter to **All modules**.
- If an alert you expected is missing, open the device page it belongs to, then come back and press **Refresh**.

Animal Health

Animal Health Records

What it is for. A simple health diary for your animals. You record vaccinations, treatments (medicines given) and visits by a vet. It also warns you when a vaccination is overdue and when produce must not yet be sold because of a medicine **withdrawal period** (the days after a medicine during which meat, milk or eggs are not safe to sell).

Before you start. The records are tied to an **enterprise** (one of the farm activities you set up, such as Broilers or Tilapia). If you have no enterprise yet, a yellow note says "No enterprises configured yet" and you cannot link records. Create enterprises first (see Part 3 — Running Production: Cycles, Stages, Events and Outputs).

> **Watch out:** Animal Health is **saved on this device only**. It is **not** connected to the care guide, to production events, to Finance or to Inventory. A vaccination or treatment you type here does not tick a care-guide step and does not post a cost. If you also want the cost in Finance, record the event in Production as well (see Part 3).

Step by step: add a vaccination

1. Click **Animal Health** under **Farm Management**, then open the **Vaccinations** tab.
2. Click **Add Vaccination**.
3. Fill in the form (the fields are listed below).
4. Click **Save**. The record appears at the top of the table, newest first.

Vaccination fields

Field	What to enter
Enterprise	The farm activity the animals belong to
Vaccine Name*	For example "Newcastle La Sota"
Batch Number	The batch number printed on the vial
Head Count	How many animals were vaccinated
Date Given*	Date of the vaccination
Next Due Date	When the booster is due; this drives the overdue warning
Given By	Name of the vet or staff member
Notes	Anything else, such as "Drinking water administration"

Step by step: add a treatment

1. Open the **Treatments** tab and click **Add Treatment**.
2. Fill in the form and click **Save**.

Treatment fields

Field	What to enter
Enterprise	The farm activity
Condition / Disease*	The illness, for example "E. coli / Colibacillosis"
Drug / Product	Medicine name

Field	What to enter
Dose	For example "1 ml / L"
Route	**Oral**, **Injection**, **Topical** or **Water**
Head Count	Number of animals treated
Start Date*	First day of treatment
End Date	Last day of treatment. **Always fill this in when you enter a withdrawal period.**
Withdrawal Period (days)	Days to wait after the End Date before selling or slaughtering
Treated By	Vet or staff name
Notes	Anything else

When you type a withdrawal period above 0, an amber box appears: "Do not slaughter or sell produce from treated animals until the withdrawal period has elapsed after the end date."

Step by step: add a vet visit

1. Open the **Vet Visits** tab and click **Add Vet Visit**.
2. Fill in the form and click **Save**.

Vet visit fields

Field	What to enter
Enterprise	The farm activity
Vet Name*	Name of the vet
Clinic / Practice	The vet's practice
Visit Date*	Date of the visit
Follow-up Date	When the vet will return
Purpose of Visit	For example "Routine check"
Findings	What the vet found
Recommendations	What the vet advised
Cost (ZMW)	The fee. The table shows it with a "K" in front of the number.

What you will see

The **Overview** tab shows four tiles, a withdrawal warning and an upcoming-vaccination table.

Overview item	Meaning
Total Vaccinations	Number of vaccination records
Active Treatments	Treatments whose End Date is today or later
Next Vaccination Due	The earliest Next Due Date in your records, with the vaccine name
Total Vet Visits	Number of vet visit records
Withdrawal period active	An amber banner for each treatment where today is still before the End Date plus the withdrawal days. It names the date from which you may sell.
Upcoming Vaccinations	The five earliest due dates. Status shows **Overdue** (red), **Due in Nd** (amber, 7 days or fewer) or **In Nd** (green)

In the **Vaccinations** table a red **Overdue** label appears next to a Next Due Date that has already passed.

Good to know

- The three required fields are marked with a star. If one is empty, **Save** simply does nothing and no message appears. Check the star fields first.
- On the very first visit, if you already have an enterprise and all three lists are empty, the page adds **sample records** (two vaccinations, one treatment and one vet visit) to your first enterprise. Delete is not available, so ignore them or restore a clean backup.
- You cannot edit or delete a record once saved. Check your entries before you click **Save**.
- Records are saved on this device only. Make a backup with **Backup & Restore**.

If something goes wrong

- Nothing happens when you click **Save**: a star field is empty. Fill in the vaccine/condition/vet name and the date.
- The Overview page goes blank after you saved a treatment with a withdrawal period but no End Date. Avoid this by always filling in the End Date when a withdrawal period is entered.

Staff & Labour

People & Access

What it is for. A staff list for the farm: names, roles, contact details, which enterprises each person works on, and a list of ticked permissions per person.

> **Watch out:** This page is **saved on this device only**. It is a notebook, not a login system. Adding a person here does **not** give them a login, and ticking a permission here does **not** change what they can open in the app. To give someone a real login with real permissions, use **Team & Permissions** (see Part 1 — Getting Started and Your Account). This page has no time logs, no attendance, no approvals and no payroll.

Step by step: add an employee

1. Click **Staff & Labour** under **Farm Management**. The **Directory** tab opens under the heading **People & Access**.
2. Click **Add Employee**.
3. Fill in the form and click **Add Employee**.

Employee fields

Field	What to enter
Full Name*	The only required field
Role	farmhand, supervisor, driver, vet officer, accountant, manager, farm admin, owner. Choosing a role fills in that role's usual permissions
Email, Phone	Contact details
Hired Date	Date the person started
Enterprise Access	Tick the enterprises the person works on. "none = all". Shown only if you have enterprises
Active employee	Untick for someone who has left

Other buttons on a staff card

- The green switch at the top right of a card makes the person **Active** or inactive. Inactive people show a red **Inactive** label.
- **Edit** reopens the form (**Save Changes**).
- **Permissions** opens the second tab for that person.
- The bin icon asks "Remove NAME?" with **Yes** and **No**.

Roles & Permissions tab

1. Click a name in the left list. The right panel shows the person's permissions in four groups.
2. Click the green tick or red cross next to a permission to switch it on or off. The change is saved at once.
3. Click **Reset to role defaults** to go back to the role's standard list.
4. The **Save Permissions** button only shows the message "Permissions saved". The changes were already stored when you clicked each permission.

Group	Permissions in the list
Operations	View Dashboard, Manage Production, Manage Inventory, Manage Sales, Manage Procurement, Animal Health
Finance	View Finance, View Reports, Log Production Costs
IoT & Data	IoT & Sensors, Activity Log, Marketplace
Administration	Manage Staff, Farm Settings, System Administrator ("Grants full access to all modules")

What you will see. The top of the Directory shows the count of employees, how many are active and how many different roles are in use.

Good to know

- The first time you open the page, three sample staff appear: Alice Banda (farmhand), Bob Mwale (supervisor) and Carol Phiri (manager). Edit or remove them.
- The role names also appear in the Requisitions and Procurement pages only as free text. They are not linked.

If something goes wrong

- Clicking **Add Employee** does nothing: the Full Name is empty.

Procurement

Procurement

What it is for. To record what you order from suppliers: purchase orders (POs), their delivery and payment status, and a small supplier list with star ratings. The page header says "Supplier orders, quotes, and delivery tracking".

> **Watch out:** Procurement is **saved on this device only**. Marking an order **Delivered** does **not** add stock to Inventory and does **not** post a cost to Finance. Record those in Inventory and Finance yourself (see Part 4 — Running the Farm Business: Inventory, Sales, Finance, Credit and Reports).

Before you start. Add at least one supplier before you create an order, because an order needs a supplier.

Step by step: add a supplier

1. Click **Procurement** under **Farm Management**, then the **Suppliers** tab.
2. Click **Add Supplier**.
3. Fill in the form and click **Save**.

Supplier field	What to enter
Name*	Supplier or shop name
Contact Person, Phone, Email	How to reach them
Category	Feed, Vet Supplies, Equipment, Seeds, Chemicals or Other
Rating	1 to 5 stars (default 3)
Notes	For example "Bulk discounts available"

Step by step: raise an order

1. Open the **Orders** tab and click **Add Order**. The window is called "New Purchase Order".
2. Choose the **Supplier** and (optionally) the **Enterprise**.
3. Choose the **Expected Delivery** date.
4. Under **Line Items**, fill **Item**, **Unit**, **Qty** and **Price** for each line. Click **Add Line** for more lines, or the X to remove a line. The **Total** updates as you type.
5. Add **Notes** if you wish, then click **Save**.

The order is created with the status **Draft** and payment **Unpaid**. The order number looks like PO-2026-1234 (the year and four digits made from the clock).

Working with orders

- Click a row to expand it and see the line items and notes.
- Use the search box (PO number or supplier) and the two filters (status and payment).
- **Mark Delivered** appears only on orders whose status is **Sent** or **Confirmed**. It sets the status to **Delivered** and records today's date.
- **Mark Paid** appears on any order that is not paid and not cancelled. It sets payment to **Paid** for the full total.

What you will see

Item	Meaning
Statuses	Draft, Sent, Confirmed, Delivered, Cancelled
Payment	Unpaid, Partial, Paid
Balance Due	Total minus amount paid (red when above zero)

Item	Meaning
Overview tiles	Total Orders, Pending Delivery (Sent or Confirmed), Overdue (expected date passed), Spend This Month (all non-cancelled orders dated this month)
Upcoming Deliveries (Next 7 Days)	Sent or Confirmed orders due in the coming week

Amounts are shown with a "K" (kwacha) and two decimals.

Good to know

- In this version there is **no button to move a Draft order to Sent or Confirmed**, no button to cancel, and no way to edit an order or a supplier after saving. Those statuses exist only in the sample orders.
- A **Partial** payment cannot be entered. Only the sample order shows it.
- The first time you open the page, three sample suppliers (FeedCo Ltd, AgroVet Supplies, SeedMasters Zambia) and four sample orders appear.
- A new order cannot be saved unless it has a supplier, an expected delivery date and at least one line with an item name. If one is missing, **Save** does nothing.

If something goes wrong

- "No orders match your filters." Clear the search box and set both filters to "All".

Requisitions

Requisitions

What it is for. An internal request-and-approve form: a worker asks for stock (feed, medicine, packaging and so on), a supervisor approves or rejects it, and someone marks it fulfilled when the goods arrive. It is the step before a purchase order.

> **Watch out:** Requisitions are **saved on this device only**. Names are typed by hand ("Requested By", "Reviewed by"). The page does not check who you are, so anyone using this device can approve any request.

Step by step: make a request

1. Click **Requisitions** under **Farm Management**.
2. Click **New Request**. The window is called "New Stock Request".
3. Fill in the form (below).
4. Click **Save as Draft** to keep it for later, or **Submit Now** to send it for approval. Both buttons stay grey until **Requested By** and every line's **Item name** are filled in.

Field	What to enter
Requested By*	The employee's name
Enterprise	The farm activity the stock is for
Priority	Low, Normal or Urgent
Category	Feed, Medicine, Equipment, Seeds, Fingerlings, Packaging or Other
Justification	Why the stock is needed

Field	What to enter
Line Items*	Item name*, Description, Qty, Unit, Cost/unit (an estimate) for each line. Add Line* adds a line; the X removes one (the last line cannot be removed)

The footer shows "Est. Total: ZMW ..." as you type. Request numbers look like REQ-2026-005 and count upwards.

Approving a request

1. Open the **Pending Review** tab (requests with the status **Submitted**).
2. Click the arrow on a request card to expand it, then click **Approve** or **Reject**.
3. A **Review Decision** box opens. Type **Reviewed by** (your name) and an optional **Note**.
4. Click **Confirm Approve** or **Confirm Reject** (or **Cancel** to close the box).
5. For an approved request, click **Mark as Fulfilled** when the goods have arrived, or **Cancel** to withdraw it.

What the buttons do, by status

Status	Buttons shown
Draft	**Submit for Approval**, **Cancel**
Submitted	**Approve**, **Reject**
Approved	**Mark as Fulfilled**, **Cancel**
Rejected, Fulfilled, Cancelled	None (these are final)

What you will see

- Tabs: **All**, **Pending Review**, **Approved**, **History** (fulfilled, rejected and cancelled requests).
- On the **All** tab you can filter by status and category and click **Export CSV**.
- Header chips: total requests, how many are submitted, how many are approved, and "pending fulfillment" (the same number as approved).
- Each card shows the number, priority, category, status, date, who asked, the enterprise, the justification, the number of items and the estimated total in ZMW. Expanded, it shows the item lines, the reviewer's name and note and the fulfilled date.

Good to know

- Four sample requests appear on first open. One has a "linked PO" label. You cannot link a request to a purchase order in this version.
- Fulfilling a request does not add stock to Inventory and does not create a purchase order. Do that by hand.
- The **Export CSV** button may not produce a usable file in this version. If the download looks wrong, copy the list from the screen instead.

If something goes wrong

- "No requisitions found": change the tab or clear the filters.
- **Submit Now** is grey: a name or item name is missing.

Activity Log

Activity Log

What it is for. The page is built to show a time-ordered list of what happened in the farm app, with a search, filters and a CSV download.

> **Watch out:** In this version of the app **nothing writes real entries into the Activity Log**. The entries you see are **15 sample entries** that the page creates the first time you open it (for example "Recorded income: Feed Sales — ZMW 4,200"). They describe events that did not happen on your farm. Do not use this page as an audit trail. The Dashboard's recent-activity list reads the same sample entries.

Step by step

1. Click **Activity Log** under **Farm Management**.
2. Use the search box ("Search events..."), the module drop-down, the action drop-down (create, update, delete, login, export, system) and the date picker to filter. Click **Clear filters** to reset.
3. Click **Refresh** to read the list again.
4. Click **Export CSV** to download the filtered entries as a spreadsheet file.
5. Click **Clear** to delete every entry. The app asks "Clear all activity log entries? This cannot be undone." Confirm only if you are sure.

What you will see

- Four tiles: **Total entries**, **Today**, **Creates**, **System events**.
- Each entry shows a coloured module badge, an action badge (Created, Updated, Deleted, Login, Exported, System), a subject, a description, and how long ago it happened.
- The list keeps the newest 500 entries only.
- Footer: "Showing X of Y entries". If the filters match nothing: "No entries match the current filters."

Good to know

- After you click **Clear**, the list is empty. When you leave the page and open it again, the 15 sample entries are put back, because the page refills an empty log.
- For a real record of who did what with money and stock, use the dates and notes in **Finance**, **Inventory** and **Sales** (see Part 4).

Crop Rotation

Crop Rotation Planner

What it is for. To remember what you grew in each field in each season, and to get a simple warning and a suggestion about what to plant next. Rotating crops (not planting the same kind of crop in the same field season after season) lowers disease and pest build-up and keeps the soil in better condition.

> **Watch out:** Crop Rotation is **saved on this device only**. Its fields are **not** the same as the fields on the Weather page, and its season records are not linked to Production cycles.

Step by step: add a field

1. Click **Crop Rotation** under **Farm Management**.
2. Click **Add Field** at the top right.
3. Fill in **Field Name**, **Area (ha)**, **Soil Type** and **Location**. Only the name is required.
4. Click **Add Field**.

Step by step: log a season

1. Click **Log Season**.
2. Choose the **Field** from the list. Fill in **Crop**, **Season** (for example "2026-A" for the first rains season and "2026-B" for the second), **Start Date**, **End Date** and **Yield (kg/ha)**.
3. Choose the **Crop Family**: legume, cereal, brassica, solanaceae, cucurbit, root, leafy or fallow.
4. Click **Save Record**. Field, Crop and Season are required; if one is empty nothing happens.

> **Tip:** Families in plain words. Legume: beans, soybeans, groundnuts, cowpeas. Cereal: maize, sorghum, wheat. Brassica: cabbage, kale, rape, broccoli. Solanaceae: tomatoes, peppers, potatoes. Cucurbit: pumpkin, butternut, cucumber. Root: carrots, beetroot, sweet potato. Leafy: spinach, lettuce. Fallow: resting the land or a cover crop.

The four tabs

Tab	What it shows
Overview	Three tiles (Registered Fields, Season Records, Rotation Warnings), an amber warning card for each field with a problem, and for every field a "recommended crops" list with a tip
Fields	One card per field with area, soil, location, the latest crop and its last six seasons. The small x removes the field
History	A table of all season records: Field, Season, Crop, Family, Yield (kg/ha), Notes. The x at the end removes a record
Planner	A timeline per field, one block per season, ending with a dashed "Plan" block for the next season

How the warning and the suggestions are worked out

- The page looks at the two most recent seasons of a field (by start date).
- It warns when the newest crop's family should not follow the previous family: cereal after cereal, solanaceae after solanaceae or brassica, brassica after brassica or solanaceae, root after root, cucurbit after cucurbit, or leafy after leafy. The message reads, for example, "Maize follows Maize — same family (cereal). Disease and pest pressure risk is elevated."
- Suggestions are the families that are neither the last family nor one of its "bad followers". Each is shown with example crops. The Overview shows up to four.
- Under the suggestions a tip explains the last crop, for example: legume "Excellent nitrogen fixer — great before cereals"; fallow "Soil rest improves structure; weed suppression"; cereal "Light residue; follow with legume to restore N".

Good to know

- The rotation is matched by **field name**. If you add a new record, pick the field from the list so the name is exactly the same.
- Removing a field does not remove its season records, and the x buttons delete at once without asking.

- The first time you open the page, three sample fields (Field A — North, Field B — South, Field C — East) and nine sample season records for 2023 and 2024 are added. Remove them if you do not want them.
- There is no box for notes when logging a season, although the History table has a Notes column.

If something goes wrong

- "No fields registered yet. Add your first field." Click **Add Field**.
- "No season records yet. Log a season to start tracking." Click **Log Season**.

Smart Engine

Smart AI Operations Engine

What it is for. A daily helper page. It reads your active production cycles, your Finance entries, your Inventory and some device pages, and turns them into (1) up to six plain-language insights and (2) a feed and water plan for today.

> **Note:** "Smart" here means **fixed rules and fixed feeding norms**, not a program that learns from your farm. The same inputs always give the same answers.

Before you start. The feeding plan needs at least one **active** production cycle (see Part 3 — Running Production: Cycles, Stages, Events and Outputs). Insights from Finance and Inventory need entries in those modules.

Step by step

1. Click **Smart Engine** under **AI & Intelligence**.
2. Read the four tiles at the top: **Today's Total Feed Need** (kg), **Today's Total Water** (litres), **AI Insights** (how many cards) and **Active Cycles**. A dash means the number cannot be worked out yet.
3. Read the **AI-Generated Insights** cards. Click **Refresh** to recalculate.
4. Scroll to **Per-Cycle Smart Recommendations (Today)** for the feed and water plan.
5. Look at the three cards at the bottom: **Feed Forecast — Next 7 Days**, **Active Cycles at a Glance** and **Tip of the Day**.

What each insight rule looks for. The cards appear in this order, and the page shows at most six.

Rule	It appears when	Severity
Low DO in a pond — aerator off	A pond on the Aquaculture page has dissolved oxygen below 5 mg/L and its aerator is off	Critical
Temperature alert in a poultry house	A house temperature is below 18 or above 30 degrees C	Warning
Inventory below reorder point	One or more stock items have a quantity at or below their minimum stock level. Up to three names are listed	Warning
This month's income and expenses	There is at least one Finance entry dated this month. Shows income, expenses and net profit or loss	Information
Battery critically low	A battery bank is below 20 percent charge	Critical
Soil moisture critical	A soil zone on the Soil Depth page has the status Critical	Critical
All systems normal	Fewer than three cards were produced. This filler card says "All systems normal — no issues detected"	Information

> **Watch out:** The pond, house, battery and soil rules read the **device pages**, which hold sample or simulated values (see "Understanding devices, sensors and readings" later in this Part). Also, as the app is built today, the poultry-temperature and battery rules look for values under names that the Poultry Houses and Energy pages do not use, so those two cards are unlikely to appear. The Inventory and Finance cards use your real company data.

The daily feed and water plan. For every active cycle the table shows the enterprise and day number, the stage, the feed type, feed in kg, water in litres and a note. The numbers are the number of animals (the total quantity in the cycle's production units; 100 if none is recorded) multiplied by a fixed daily norm for the enterprise category:

Category	Feed per animal per day	Water per animal per day	Feed type shown
Poultry	120 g	250 ml	Broiler Grower
Livestock	8 kg	30 litres	TMR / Silage Mix
Aquaculture	30 g	none	Floating Pellets
Crops	none	2 litres per unit	not applicable
Horticulture	none	1.5 litres per unit	Fertigation
Greenhouse	none	1.2 litres per unit	Drip fertigation
Processing, Services	none	none	not applicable

Enterprise types that are not in this list use the Crops norm.

Good to know

- The norms are the same for every age and stage. A broiler chick and a 5-week bird both get 120 g. Treat the plan as a rough guide and follow the care guide of your template for real feeding rates (see Part 2 — Templates, Record Fields and Care Guides).
- **Feed Forecast — Next 7 Days** is today's feed need times 7 plus 5 percent.
- **Tip of the Day** is the same sentence every day.

If something goes wrong

- "No active production cycles. Start a cycle in the Production module to see daily recommendations." Start a cycle first.

AI Insights

Predictive AI & Intelligence

What it is for. A set of five tabs that mix some live information from your cycles with fixed advice and reference figures: **Disease Alerts**, **Yield Forecast**, **FCR Optimizer**, **Market Demand** and **Crop Calendar**.

> **Watch out:** The subtitle talks about "AI models" and the corner badge says "AI models updated 2h ago". The badge is a fixed label. The page uses simple rules, not a trained model. The Market Demand prices are fixed reference figures and are **not** live market prices.

Step by step

1. Click **AI Insights** under **AI & Intelligence**.

2. Click a tab at the top.
3. If a high-risk disease alert exists, a red **High-Priority Disease Alert** banner appears above the tabs (the standard alerts below never reach "high" on their own).

The five tabs

Tab	What it shows	Where it comes from
Disease Alerts	Cards with a title, a risk (Low, Medium, High), a "days horizon", an explanation, a **Recommended action** and a "Model confidence" bar	Two general advisories always appear ("Biosecurity — General Advisory", "Seasonal Disease Watch"). Poultry cycles older than 14 days add a "Newcastle Disease Watch" (Low up to day 28, then Medium). Aquaculture cycles add a "Low DO Alert" (Medium)
Yield Forecast	One card per active cycle: the current stage, "units stocked", "Day N" and the days left to the stage's target end date	Your production cycles. It is a progress card, not a harvest prediction
FCR Optimizer	One card per active poultry cycle with Actual FCR, Target FCR (1.65) and "Pending"	Your cycles. Actual FCR always shows a dash, with the note "FCR not yet measured — record feed and weight data in inventory to enable AI FCR tracking."
Market Demand	Four commodities with a demand badge, a price in ZMW and a trend arrow	Fixed list: live broilers, Grade A tomato, lettuce head, bulk maize
Crop Calendar	Dates from your cycles, then six suggested activities	Stages not yet completed whose target end date is within 60 days (or up to 3 days late), labelled overdue, upcoming (within 7 days) or planned. The six suggested chores (check water lines, biosecurity walk-through, review feed stock, check growth, sample soil or water, mid-cycle reconciliation) are generic, dated 3, 7, 10, 14, 21 and 30 days from today

> **Tip:** **FCR** (feed conversion ratio) is the kilograms of feed a flock eats for each kilogram of weight it gains. A lower number is better. A broiler target near 1.65 is a good one.

If something goes wrong

- "No active production cycles. Start a cycle to see yield forecasts." and "No active poultry cycles. FCR tracking requires an active poultry enterprise." Start a cycle of the right type.

Financial AI

Financial AI & P&L

What it is for. To see profit and loss for each production cycle, a breakdown of costs, a break-even calculator and a loan tracker. The page title is **Financial AI & P&L**.

Before you start. The first three tabs read your **Finance** entries (see Part 4 — Running the Farm Business: Inventory, Sales, Finance, Credit and Reports). For the cycle figures to work, each Finance entry must be linked to a cycle: in Finance, choose the cycle in the **Cycle** field when you add the entry. Entries with no cycle count in the totals at the top but in no cycle.

The four tiles at the top

Tile	Meaning
Total Revenue	All income entries in Finance (fulfilled sales orders are already in the ledger)
Total Costs	All expense entries

Tile	Meaning
Net Profit	Income minus expenses. The amount is shown without a minus sign; a red icon means a loss
Active Cycles	Cycles with the status active

A dash appears when Finance has no entries.

P&L tab. Pick a cycle in the **Cycle** list (or click a row in **All Cycles**). The page shows **Revenue**, **Costs** and **Profit** for that cycle, plus **Profit Margin** (profit divided by revenue) and **ROI** (profit divided by cost). If nothing is linked to the cycle, it says "No transactions tagged to this cycle yet. Record income/expenses in Finance and link them to this cycle."

Costs tab. A bar for every expense category with its amount and its percentage of all costs, biggest first, and the **Total**. Empty: "Record expenses in the Finance engine to see your cost breakdown here."

Break-Even tab. A calculator. Type four numbers (the starting numbers are only examples):

Field	Meaning
Fixed Costs	Costs you pay whatever you sell (rent, wages, loan instalments)
Variable Cost / Unit	Cost of each unit sold (feed, seed, packaging)
Selling Price / Unit	Price you get for each unit
Expected Units to Sell	How many units you plan to sell

The page shows **Contribution Margin** (price minus variable cost), **Break-Even Units** (fixed costs divided by contribution margin), **Break-Even Revenue**, **Margin of Safety** (how far your expected sales are above break-even, in units and percent) and **Projected Profit**. If the price is not higher than the variable cost you see "Selling price must be greater than variable cost."

> **Example:** Fixed costs ZMW 48,000, cost per bird ZMW 42, price ZMW 75. Each bird leaves ZMW 33. You need 48,000 divided by 33, about 1,455 birds, to break even.

Loans tab. A record of the loans you have taken. It is **saved on this device only** and does not post to Finance or to your Credit Profile.

1. Click **Add Loan**.
2. Fill in **Lender**, **Purpose**, **Principal**, **Interest Rate (% pa)**, **Term (months)** and **Start Date**, then click **Add Loan**. Lender and principal are required.
3. Each month you pay, click **Record Payment** on the loan card. It adds one paid month. When all months are paid the loan becomes **Paid Off**.

The tiles show **Total Borrowed**, **Outstanding Balance**, **Monthly Obligations** and **Avg Interest Rate**. The monthly payment is worked out as an ordinary equal-instalment loan with the interest on the reducing balance. The status **Defaulted** exists but cannot be set from the screen.

Good to know

- On the first visit two sample loans appear (ZANACO, ZMW 50,000 at 18 percent; SANLAM, ZMW 20,000 at 22 percent). Replace them with your own.
- A recorded payment cannot be undone. Click **Record Payment** only after you have paid.

Smart Vision

Smart Vision & AI Intelligence

What it is for. Four tabs about cameras and images: **Camera Watch**, **Drone Intel**, **AI Vision** and **Community Intel**.

> **Watch out:** **Smart Vision is a demonstration. It does not analyse real pictures or video.** - It needs **no key and no account** with any image service, because it does not use one. - On **AI Vision**, you type the web address of a photo, but the photo is never opened or looked at. The page waits about two seconds and then picks one of a few ready-written answers for the type of scan you chose. The "confidence" percentage (between 72 and 93) is a random number. - The camera pictures on **Camera Watch** are placeholders. No video is connected. - The drone results are random numbers. Do not use these answers to treat sick animals or crops. For a real diagnosis use **Vet Services** (see the Marketplaces chapters below) or your extension officer (see Part 8 — Buyers, Government, Extension Officers and Programme Partners).

All four tabs are **saved on this device only**.

Camera Watch

1. Click **Smart Vision** under **AI & Intelligence**; **Camera Watch** is the first tab.
2. Any unresolved alert is shown in a red box with a **Resolve** button. Three sample alerts appear at first (a count difference in a broiler house, unusual clustering, and an offline gate camera).
3. Click **Add Camera** and fill in **Camera Name ***, **Enterprise**, **Resolution** (720p, 1080p, 4K), **Location / Mount Point** and the **Enable AI analysis** box. A new camera is always shown as **Offline**, and there is no way to change that status.
4. Click the bin on a camera card to remove it (the app asks to confirm).
5. To compare a count with your records, click **Log Count**, choose the **Camera** (or "Manual count"), the **Enterprise ***, the **Counted Qty *** and optional **Notes**, then **Submit Count**.

The expected quantity is the total quantity in the production units of the **active cycle** of that enterprise. If there is no active cycle, nothing is compared. The count is **ok** when it differs from the expected number by less than 1 percent; otherwise it is marked **discrepancy** (red). **Recent Stock Counts** lists the counts, newest first.

Drone Intel

1. Click **Schedule Flight**, choose the **Enterprise**, the **Flight Type** (Survey, Spray, Inspection, Livestock Count) and **Notes**, then **Create Flight**. The flight is **planned**.
2. Click **Start** to set it **in flight**, then **Complete + AI Analyse**. The page invents an area covered (1 to 6 ha), a health score (one of 45, 61, 72, 78, 85, 90), a rating (poor, fair, good or excellent) and a short list of issues.

AI Vision

1. Pick one of eight scan types: **Crop Disease**, **Pest ID**, **Livestock Health**, **Animal Count**, **Field Survey**, **Weed Detection**, **Soil Assessment**, **General Scan**.
2. Type the **Image URL *** (it must be a web address). The hint suggests uploading the photo to a photo-sharing site first.
3. Optionally describe what you see, choose an **Enterprise** and tick **Share with community**. The description is not used and the share box does not publish anything.

4. Click **Run AI Analysis**. The result shows a diagnosis, severity (none, low, medium, high, critical), findings and numbered recommended actions. Past results are listed under **Recent Analyses**; click one to reopen it.

Community Intel

A board of field reports. Click **Submit Report** and fill in **Title ***, **Category** (Crop Disease, Pest/Insect, Animal Disease, Nutritional, Yield Problem, Weed, Soil Issue, Best Practice, Other), **Crop / Animal**, **Location Hint** and **Description**. Use the category filter to narrow the list. The thumbs-up button adds one to the count each time it is clicked.

> **Note:** Although the board is described as cross-farm, the reports are kept on **this device only**. Other farms do not see what you post, and you do not see theirs. The two reports you see at first (a Newcastle-like outbreak in Lusaka, tomato spots in Chongwe) are samples.

Weather

Weather & Field Intelligence

What it is for. A live 7-day forecast, today's conditions, farm advice for each day, and satellite plant-health readings for your fields. Unlike most pages in this Part, **Weather uses real, live data and is saved to the company account**, so everyone in your company sees the same stations and fields on any device.

Where the data comes from

- Forecasts and current conditions: Open-Meteo, a free weather service, for the exact latitude and longitude of each of your weather stations.
- Plant health (NDVI): NASA MODIS satellite images at 250 metre detail, a new reading about every 16 days, for each of your fields.
- The farm advice and the alerts are written by the app from simple rules (see below).

Before you start. You need the GPS coordinates of your farm (latitude and longitude). Zambia example: Lusaka is about -15.33, 28.52 (south latitudes are negative). You can read them from a phone map app.

Step by step: set up

1. Click **Weather** under **AI & Intelligence**. If you have no station, a note says "No weather station yet".
2. Open the **Stations** tab. Click **Add station** if the form is closed.
3. Fill in **Name** (for example "Farm HQ"), **Latitude** and **Longitude**. Or click **Use my location** and allow the browser to share your position.
4. Click **Save & sync**. The station is saved and the first forecast is fetched.
5. To add a field for satellite readings, open **Fields & NDVI**, click **Add field**, fill the form (below) and click **Save field**.
6. Click **Sync now** at the top at any time to fetch fresh data for all stations and fields.

> **Note:** The platform can also refresh in the background, but do not rely on it. Press **Sync now** before you plan spraying or irrigation.

Field form

Field	What to enter
Field name*	For example "Block A"
Crop	For example "Maize"
Stage	Fallow, Land Prep, Planting, Vegetative, Flowering, Fruiting, Harvest Ready, Harvested
Area (ha)	Size of the field
Latitude, Longitude	Field position (or pick the nearest station and leave blank)
Nearest station	A station to borrow the position from

The four tabs

Tab	What it shows
Forecast	Seven day cards (temperature high and low, chance of rain and expected rain in mm), then a line of **farm advice** for each day
Current	Temperature, Humidity, Wind, UV index (highest today), Rain (last hour), Pressure
Fields & NDVI	For each field the latest NDVI value, a colour label, a trend chart and recommendations. The refresh icon pulls the newest satellite reading; the bin deletes the field and its history
Stations	Each station with its last readings, a live or idle dot, a refresh icon and a bin

The blue banner at the top shows today's high, low, condition, rain chance, wind and humidity, the advice for today, and the source and time of the last sync. Three tiles show **Rain days (7d)**, **Expected rainfall** and **Avg max temp**. If you have more than one station, a list at the top right switches between them.

Weather alerts. A red line appears (for the last two days) when a reading shows one of these:

Alert	When
Heat	Temperature at or above 35 degrees C
Frost	Temperature at or below 2 degrees C
Strong wind	Wind at or above 40 km/h
Heavy rain	5 mm or more in the last hour
Heavy rain expected	20 mm or more forecast for today
Thunderstorm	A thunderstorm forecast for today

Examples of the daily advice. Dry day: good for spraying early in the morning, weeding and drying grain. 50 percent or more chance of rain: do not spray or feed the leaves; good for transplanting. Wind of 40 km/h or more: no spraying, stake young plants, check house covers. Heat of 35 degrees C or more: irrigate early or late, give shade and extra water. Frost risk: cover seedlings and keep chicks warm.

NDVI colours. NDVI is a number from 0 to 1 showing how green and healthy a field looks from space.

NDVI	Label	Meaning
0.65 and above	Excellent	Dense, vigorous crop
0.45 to 0.65	Good	Healthy
0.30 to 0.45	Fair	Sparse or stressed; walk the field
Below 0.30	Poor	Very little green cover; investigate (or expected if the field is fallow or just planted)

Good to know

- "already up to date (MODIS publishes a new composite every 16 days)" is normal when you sync a field twice in a short time.
- The fields on this page are not the same as the fields in **Crop Rotation**.
- Deleting a station or field asks you to confirm.

If something goes wrong

- "Add a station first." or "No forecast yet — press Sync now.": add a station, then press **Sync now**.
- A red message under the title shows the first error from the weather service, for example when coordinates are wrong or the service is busy. Check the coordinates and try again later.
- "Station saved, but the first sync failed": the station exists; press **Sync now** again.

Sustainability

Sustainability & Compliance

What it is for. A small record book for four things buyers and certifiers ask about: the carbon you release and save, the water you use, the certificates you hold and the tasks you must finish to keep them.

> **Watch out:** It is **saved on this device only**. Nothing is calculated for you from Production, Energy or Water pages; you type each figure. The first time you open it, three sample carbon rows and three sample water rows are added.

Four tiles. Total Emissions and **Carbon Offsets** (tonnes of CO2 equivalent), **Net Carbon** (emissions minus offsets) and **Water Used (MTD)**. The water tile adds **all** water rows you have entered, not only this month.

Carbon tab. Shows **Emissions by Category** and **Carbon Offsets** with the **Net Position**. Click **Log Carbon Entry** and fill in:

Field	What to enter
Category / Source	For example "Fuel Combustion", "Manure Management"
Type	**Emission** or **Offset / Sequestration** (carbon taken in by trees or soil)
CO2e (kg)	Kilograms of CO2 equivalent
Month	The month the figure is for
Notes (optional)	Any context

Water tab. Click **Log Usage** and fill in **Use Type**, **Volume (m3)**, **Source** (borehole, river, municipal) and **Month**. Each row shows a bar and the total at the bottom.

Certifications tab. Click **Add Certification** and fill in **Certification Name** (for example GlobalG.A.P. or Organic Zambia), **Certifying Body**, **Status** (Planning, In Progress, Certified, Expired) and **Expiry Date**. On each card the **Advance Status** button moves Planning to In Progress to Certified. On a certified card the **View Certificate** button does nothing yet.

Compliance tab. Click **Add Task** and fill in **Task Title**, **Due Date**, **Priority** (Critical, High, Medium, Low) and **Related Certification**. Click the box on a task to mark it done (click again to reopen). Tasks are sorted by due date.

Good to know

- Entries cannot be edited or deleted after saving, so check them first.
- The red "overdue compliance task" banner is built into the page, but no task is ever set to overdue automatically, so you will normally not see it. Watch the due dates yourself.
- Keep the real certificate files with your own papers; this page stores only the details.

Understanding devices, sensors and readings

Before you open the device pages, read this chapter. It explains the words and tells you honestly what these pages can and cannot do today.

What is a sensor or device? A sensor is a small instrument that measures something: soil moisture, air temperature, dissolved oxygen (DO, the oxygen in pond water), water level in a tank, battery charge. A device can also be something you switch on and off, such as a pump, a valve, an aerator (a machine that puts air into pond water), a fan or a generator. A **reading** is one measured value at one moment, for example "28.4 degrees C at 10:15".

How can a reading get into the app? There are three ways. Only the first two exist in this version.

Way	What it means	Where you find it
Typed by you (manual entry)	You look at a thermometer or gauge and type the number	Cold Chain grain silos (**Log Reading**) and trucks (**Update**), tank level on Water Mgmt (**Update Level**), and the logbook forms (feeding, mortality, eggs, water change, irrigation)
Simulated	You press a button and the page makes up a believable number	**Simulate Reading** (Smart Devices), **Refresh Readings** (Aquaculture, Soil Depth), **Refresh** (Poultry Houses, Energy)
Sent by real hardware through a gateway	A sensor and a gateway box send numbers on their own	**Not available on these screens.** The Device Gateway and Farm Gateway pages are demonstration screens and do not receive data from physical sensors

> **Watch out:** Numbers marked "live", "online" or "connected" on the device pages are **not** coming from real equipment. Every sample device, tank, pond, house, cold room and battery is made-up example data. Use the pages to practise, to keep a logbook, or to plan. Do not rely on them for decisions that protect animals, crops, stored grain or cold-room produce.

Thresholds. A threshold is a limit. When a reading goes above a maximum or below a minimum the page shows a warning colour. Where you can set your own limits it is described under each page (for example **Alert Min** and **Alert Max** on Smart Devices, **Alert Below (%)** on a tank). On other pages the limits are fixed by the app and listed in this Part.

Alerts. An alert is a message that something is outside its limit. On the device pages the alerts you see are either sample alerts or alerts that exist only to show how the page looks. In this version, a new alert is **not** created automatically when a reading crosses a limit. The Notifications page collects the saved alerts (see the Notifications chapter).

Automation rules. A rule says "IF this happens, THEN do that". In this version **no rule runs by itself**. You press **Run** to try a rule by hand (see the Automation chapter).

Your data stays on the device. All device pages are saved on this device only. Make a backup with **Backup & Restore** (see Part 1 — Getting Started and Your Account).

Smart Devices

Smart Devices & IoT

What it is for. A register of your sensors and machines with a summary of their status, a simple rule list and a log of alerts. The title is **Smart Devices & IoT**. IoT means "internet of things", sensors that talk to the internet.

> **Watch out:** On this page a reading is **typed by the page itself** when you press **Simulate Reading**. The WhatsApp, SMS and satellite panels in the **Connectivity** tab are fixed pictures that always say "Connected" or "Active". No message is sent and no satellite feed is read.

> **Note:** Smart Devices and **Device Gateway** share one saved device list on this device but keep different details for each device. Choose one of the two pages for your list and use it consistently.

Step by step: add a device

1. Click **Smart Devices** under **AI & Intelligence**, then **Add Device**.
2. Fill in the form (below) and click **Add Device**. The button stays grey until you type a name.
3. A new device is shown as **offline** with a battery of 100 percent and no reading (a dash).
4. Open the **All Devices** tab and click the arrow on the device row. Click **Simulate Reading** to give it a pretend reading. The status then becomes **Online**, or **Warning** or **Critical** (chosen at random) if the pretend reading is outside your minimum or maximum.

Field	What to enter
Device Name*	For example "Greenhouse Temp Sensor"
Sensor Type*	Choose from the grouped list (see below)
Connectivity	LoRaWAN, NB-IoT, Wi-Fi, Bluetooth, 4G/LTE, Zigbee, Modbus (how the sensor would talk to a gateway)
Enterprise	The farm activity it belongs to
Location / Zone	For example "House 2, Pond A"
Enable threshold alerts	Tick to set limits
Min, Max	Your lower and upper limit, in the sensor's unit

Sensor types. The list has 53 types in eleven families:

Family	Types
Soil & Substrate	Soil Moisture, Soil Temperature, Soil EC, Soil pH, Soil NPK, Soil Salinity, Soil O2, Soil Compaction
Weather Station	Air Temperature, Humidity, Wind Speed, Rainfall, Solar Radiation, Air Pressure, Leaf Wetness, ET0
Water & Irrigation	Water Level, Flow Rate, Pipe Pressure, Water Quality
Aquaculture	Dissolved Oxygen, Water pH, Water Temperature, Ammonia, Turbidity, TDS, Salinity
Livestock	RFID Reader, GPS Tracker, Weight Scale, Health Sensor, Activity Sensor
Poultry House	CO2, Ammonia (air), Egg Counter, Feed Consumption, Water Consumption
Energy	Solar Output, Battery Level, Energy Consumption, Generator Fuel
Cameras & Vision	IP Camera, Thermal Camera, Motion Sensor
Machinery	Tractor GPS, Fuel Level, Engine Hours

Family	Types
Storage & Cold Chain	Cold Room Temp, Cold Room Humidity, Grain Temperature, Grain Moisture
General / Other	Gas Detector, Light Intensity

The six tabs

Tab	What it shows
Device Families	A card for each family that has devices, with the number of devices, how many are online and a coloured status (All OK, warning, critical). Click a card to go to **All Devices**
AI Dashboard	**Devices Needing Attention**, a few **AI Insights** and **All Device Readings**
All Devices	One row per device with its status dot, connectivity label, last seen time, reading, battery and an expandable panel
Automation	The rule list (IF/THEN). See below
Alert Log	A list of past alerts with severity and channel (WhatsApp, SMS, app)
Connectivity	A count of devices by connection type, and three fixed panels

In the expanded device panel you see the type, unit, **Alert Min** and **Alert Max**, and three buttons: **Simulate Reading**, **Alerts On/Off** (a flag only; nothing is sent) and **Remove** (asks to confirm).

The AI Insights rules. They are simple: dissolved oxygen sensor below 5 mg/L ("Critical DO"); a humidity sensor above 80 percent ("High Humidity"); a water level sensor below 30 percent ("Low Water", with a rough number of hours left worked out as the level divided by 5); a battery at or below 20 percent ("Low Battery"). If none applies you see "All Systems Normal".

Automation tab: adding a rule. Click **New Rule**, then fill in **Rule Name ***, **Trigger Device ***, **Condition** (Goes above, Falls below, Equals), **Threshold** and **Action / Response *** (any text, such as "Send WhatsApp alert + trigger pump relay"), then **Create Rule**. The switch turns a rule on or off and the bin deletes it. The card reads "IF device falls below 5 THEN action".

> **Watch out:** These rules are **notes**. The page never compares a reading with a rule and never carries out the action. The "Last triggered" time on the sample rules is made-up. For rules you can press **Run** on, see the Automation chapter.

Good to know

- On first open, 17 sample devices, 3 sample rules and 3 sample alerts are added. Remove what you do not need.
- The top-right badge shows the number of critical devices, or the number online.
- There is no way to type a real measured value on this page.

Water Mgmt

Water Management

What it is for. To keep track of your tanks and reservoirs, pumps, valves (taps that open or close a water line) and irrigation rules. Subtitle: "Tanks · Pumps · Valves · Irrigation automation".

> **Watch out:** Pumps and valves on this page are **records on screen**. Pressing **Start** or **Open** changes the picture in the app only; it does not switch any real pump. Tank levels change only when you type a new number. Sample tanks, pumps, valves, rules and two sample alerts are added on first open.

The five tabs and the header. The blue header shows **Total Capacity**, **Current Volume**, **Active Pumps** and **Open Valves**. Tabs: **Overview**, **Tanks (n)**, **Pumps (n)**, **Valves (n)**, **Rules (n)**. Alerts, if any, show in a red box with a **Dismiss** button.

Tanks

1. Open the **Tanks** tab and click **Add Tank**.
2. Fill in **Tank Name ***, **Type** (Water, Borehole, Rainwater, Chemical, Nutrient, Fuel), **Enterprise**, **Capacity (Litres) ***, **Alert Below (%)** and **Location**, then click **Add Tank**. A new tank starts **full**.
3. To record the real level, click **Update Level** under the tank, type the litres now in the tank (between 0 and the capacity) and click the tick.
4. The bin deletes a tank after you confirm.

A tank gauge turns amber below 60 percent and red below 30 percent, and shows a pulsing **LOW** badge when the level is at or below the tank's own **Alert Below** percentage.

Pumps. Click **Add Pump** and fill in **Name**, **Linked Tank**, **Flow (L/min)** and **Power (W)**, then **Save**. The **Start** or **Stop** button on a pump card changes its status. Statuses are **Running**, **Stopped**, **Fault** and **Auto** (Fault and Auto appear only on sample pumps).

Valves. Click **Add Valve** and fill in **Name**, **Zone** and **Linked Pump**, then **Save**. A new valve is **Closed**. The button on the card switches between **Open** and **Closed**. **Auto** appears only on a sample valve.

Irrigation rules

1. Open **Rules** and click **Add Rule**.
2. Fill in **Rule Name ***, **Trigger Type** (Time of day, Soil moisture below %, Tank level above %, Manual only), the **Time** or **Threshold %**, the **Valve**, the **Pump** and the **Duration (minutes)**. Click **Add Rule**.
3. To use a rule, click **Run**. The valve is set to Open, the pump to On, the run is counted, and a line is added to **Recent Irrigation Events** on the Overview tab with an estimate of the litres (pump flow multiplied by the minutes).
4. **Enable** and **Disable** switch a rule on and off. The bin deletes it.

> **Note:** Time and level triggers are not watched. A rule runs only when you press **Run**, and nothing closes the valve or stops the pump when the duration ends. Switch them off yourself with the **Stop** and **Close** buttons.

The **Overview** tab also draws a "Water Flow — Current State" picture (tank, then pump, then valves).

If something goes wrong

- "No irrigation rules configured yet." Add a rule.

Aquaculture

Aquaculture Dashboard

What it is for. A dashboard for fish ponds, tanks and cages: pond readings, aeration, feeding, water changes and fish deaths. Subtitle: "Real-time pond monitoring · aeration · feeding · water quality".

> **Watch out:** The pond readings (oxygen, pH, temperature, ammonia, turbidity, water level) **cannot be typed**. They are sample values that **Refresh Readings** changes at random. The "DO Trend — 24h" chart is a drawn pattern, not a record. Four sample ponds and three sample alerts are added on first open. For real monitoring of oxygen and ammonia, test the water yourself and record your results in the logbooks below or in your production cycle (see Part 3).

Header and tabs. Tiles: **Ponds / Tanks**, **Total Fish**, **Total Biomass**, **Critical Ponds**. Tabs: **Overview**, **All Ponds**, **Feeding Log**, **Water Quality**, **Records**. Two buttons at the right: **Feed** and **Add Pond**. Open alerts show in a red box with **Resolve**.

Add a pond

1. Click **Add Pond**.
2. Fill in **Name ***, **Type** (Earthen, Concrete, Cage, Raceway, Biofloc), **Enterprise**, **Species**, **Stocked (#)** and **Volume (m3)**, then **Add Pond**.
3. A new pond starts with ready-made readings (oxygen 7.0 mg/L, pH 7.2, 27 degrees C, ammonia 0.02 mg/L, turbidity 10, level 90 percent) and a biomass of 50 g per fish.

The pond card. It shows a status (Excellent, Good, Fair, Critical), the type, an **Aerating** badge, five reading chips (DO, pH, Temp, NH3, Turbidity), fish stocked, biomass and **Feed/day** (3 percent of biomass). The **On/Off** button switches the aerator; switching it on adds 1.5 mg/L to the oxygen figure on screen. If oxygen is below 5 mg/L and the aerator is off, a red line says "Critical DO — start aerator immediately" with a **Start** button.

Reading colours.

Reading	Green (good)	Amber (watch)	Red
Dissolved oxygen (mg/L)	6 to 10	4 to 5.9	below 4
pH	6.5 to 8.5	6.0 to 6.4	outside
Water temperature (degrees C)	22 to 30	18 to 21	outside
Ammonia (mg/L)	up to 0.05	0.05 to 0.1	above 0.1
Turbidity (NTU)	up to 20	20 to 40	above 40
Water level (percent)	60 to 100	30 to 59	below 30

Logbooks

Where	Button	Fields
Feed button at the top right	**Log Feed**	Pond, *Feed (kg)*, Feed Type, Notes
Water Quality tab	**Log Water Change**	Pond, % Changed, Reason
Records tab	**Log Mortality**	Pond, Count, Avg Weight (g), Cause

The Feeding Log tab also shows Today's Feed, Feed Events (total), Most Recent and Ponds Fed Today. The Records tab lists deaths, with the kilograms lost worked out from count and average weight. **Water Quality** also has a table of the current readings for all ponds.

Good to know

- The logbooks are lists only. Logging feed or fish deaths does **not** change the stocked number, biomass or feed per day on the pond card.
- Logging feed here does not take stock from Inventory or post a cost to Finance. Do that in Production and Inventory (see Parts 3 and 4).
- Ponds can be removed from the **All Ponds** tab (**Remove**, with confirmation). Log entries cannot be deleted.

Poultry Houses

Poultry House Dashboard

What it is for. To look at a house at a glance: climate (temperature, humidity, carbon dioxide, ammonia), controls (fan, heater, light, ventilation), eggs, feed and water, and bird deaths. Subtitle: "Climate control · egg production · feeding · mortality records".

> **Watch out:** The page holds **three sample houses** (a broiler house and two layer houses) with sample figures. You cannot add or remove a house. The climate figures change only when you press **Refresh** (made-up changes) or toggle a control. The switches do not control a real fan or heater. Four sample alerts for the first layer house are included.

Tabs and buttons. Tiles: **Houses**, **Total Birds**, **Eggs Today**, **Critical Houses**. Click a house card to select it. Tabs: **Overview**, **Climate & Controls**, **Production**, **Feed & Water**, **Records**. Buttons at the right: **Collect Eggs** (only for a layer or breeder house), **Feed Record** and **Mortality**.

Overview tab. Four tiles for the chosen house (birds, mortality rate, and either Eggs Today and Eggs This Week for layers, or Live Weight and FCR estimate for broilers), a climate card set with a **Refresh** button, and the **House Controls**: **Fan / Ventilation**, **Heater**, **Lighting** (ON/OFF) and a **Ventilation** slider (0 to 100 percent, saved when you move it). Switching the fan on lowers the temperature, carbon dioxide, ammonia and humidity figures on screen by a fixed amount.

Climate limits used by the colours

Reading	Broiler target	Layer target	Amber from	Red from
Temperature (degrees C)	26 to 30	21 to 28	29 (broiler) / 28 (layer)	32 (broiler) / 30 (layer)
Humidity (percent)	50 to 70	50 to 70	70	80
Carbon dioxide (ppm)	under 2000	under 2000	2000	2500
Ammonia (ppm)	under 20	under 15	20 (broiler) / 15 (layer)	25 (broiler) / 20 (layer)

Logbooks

Button	Fields	Notes
Collect Eggs	House, *Egg Count*, Broken, Notes	Shows in the **Production** tab with the percentage broken
Feed Record	House, *Feed (kg)*, Feed Type, Notes	Shows in **Feed & Water**

Button	Fields	Notes
Mortality	House, *Count*, Avg Weight (g), Cause	Shows in **Records**

Production tab. The egg log and **Hen Day Average (HDA)** for each layer house. HDA is the eggs laid today as a percentage of the hens in the house. 85 percent and above is green, 75 to 85 amber, below 75 red.

Feed & Water tab. For each house, feed eaten against a daily budget (amber above 105 percent of budget) and water use against its budget, then the feed records.

Records tab. Bird deaths, and a **Mortality Summary by House**. A house is shown in red when its death rate is above 4 percent (broilers) or 2 percent (other houses).

Good to know

- Logging eggs, feed or deaths adds a line to a list only. It does **not** change the bird count, eggs today or mortality figures of the house, and it does not touch Production, Inventory or Finance. For farm records that feed your reports, use Production (see Part 3).
- The broiler FCR estimate assumes an average bird weight of 2.1 kg.

Energy

Energy Monitor

What it is for. To view solar arrays, battery banks, generators and the loads that use power, and to see a 30-day picture of energy use and cost. Subtitle: "Solar · Battery · Generator · Load analytics · Cost per kg".

> **Watch out:** This page is **view-only sample data**. You cannot add or edit arrays, batteries or loads. The 30 days of figures in **Analytics** are random numbers made when the page is first opened. Amounts of money are in **US dollars** at a fixed $0.12 per kWh for grid power (and $0.35 for generator power in the history), not in kwacha.

What you can do

- **Refresh** (top right) makes small random changes to the solar output and battery charge.
- In the **Generators** tab, **Start** or **Stop** a generator. Starting sets its output to 75 percent of its capacity on screen. It does not start a real machine.
- Click **OK** on an energy alert to clear it.

Tabs

Tab	What it shows
Overview	An energy flow picture, today's solar, generator, consumption and cost, and the battery banks
Solar Arrays	Each array's status (generating, idle, fault), output against capacity, today's kWh, efficiency and irradiance, panel temperature, tilt and month total
Battery Banks	Charge ring, capacity, available kWh, charge and discharge rates, cycle count and a warning above 35 degrees C
Generators	Status, fuel level, tank size, hours since the last service. **FUEL LOW** shows below 25 percent and **SERVICE OVERDUE** after 250 hours since the last service
Load Map	Each load's power, share of the total, priority, and an estimated cost for today at $0.12 per kWh

Tab	What it shows
Analytics	Solar this month, energy cost (30 days), average daily solar, a CO2 saving estimate (0.45 kg per kWh) and four small charts

The header tiles are **Solar Output**, **Battery SOC** (state of charge, how full the battery is), **Generator**, **Farm Load** and **Self-Sufficiency** (solar plus generator output as a share of the load, up to 100 percent; red below 50).

Soil Depth

Soil Depth monitoring

What it is for. To follow soil moisture at four depths (10, 30, 60 and 90 cm) in each field zone, to see how much of the plant-available water is used up, and to log irrigation. It also tells you roughly how many millimetres to apply.

> **Watch out:** You cannot type the moisture readings. **Refresh Readings** makes small random changes (moisture falls a little each time, or rises if the zone is marked as being irrigated). Four sample zones and two sample alerts are added on first open.

Add a zone

1. Click **Add Zone**.
2. Fill in **Zone Name ***, **Texture**, **Crop** and **Area (ha)**, then **Add Zone**.
3. A new zone starts with ready-made readings at about 85, 80, 75 and 70 percent of field capacity.

Soil textures. Field capacity (FC, the most water the soil holds after drainage) and permanent wilting point (PWP, the moisture below which plants cannot take up water) are set from the texture.

Texture	FC (percent)	PWP (percent)
Sandy	12	4
Sandy Loam	18	6
Loam	28	12
Silt Loam	32	14
Clay Loam	36	18
Clay	42	22

Crops in the list: Maize, Wheat, Soybean, Cassava, Tomato, Lettuce, Rice, Sorghum, Pasture, Fallow.

How the status is worked out. The page takes the average moisture of the four depths and works out the **depletion**: how much of the plant-available water (FC minus PWP) has been used. Then:

Depletion	Status
25 percent or less	Optimal
26 to 50 percent	Adequate
51 to 75 percent	Stress
Above 75 percent	Critical

When depletion is above 50 percent the page shows an **Irrigation Recommendation**: "Apply approximately X mm to restore plant-available water to 70% field capacity", worked out from the depletion and the soil texture.

Tabs. Overview (one card per zone; click to open its profile), **Depth Profiles** (choose a zone, see a depth chart and a card for each depth with moisture, temperature and electrical conductivity), **Irrigation Log** and **Analysis** (a comparison table for all zones and a depletion bar for each).

Log an irrigation event. Click **Log Irrigation**, choose the **Zone ***, enter **Depth (mm) ***, choose the **Method** (Drip, Sprinkler, Furrow, Flood) and **Duration (min)**, then **Save**. The zone's "last irrigated" time is updated. The moisture readings do **not** change.

Good to know

- Open alerts show with a **Resolve** button at the top of the page.
- There is no button to delete a zone or an irrigation entry.
- Use your own probe or a hand test (squeeze a handful of soil) for real decisions.

Automation

Automation Rules

What it is for. To write IF/THEN rules for your devices, to keep a library of ready-made templates, and to try them out. Subtitle: "Compound conditions · cascade actions · schedules · templates".

> **Watch out: No rule on this page runs by itself.** The conditions (such as "soil moisture below 30%") are never checked against any reading. A rule does something only when you press **Run** on it. Even then it only changes the on/off state of pumps, valves, aerators, fans, heaters and generators that are recorded on the other device pages (Water Mgmt, Aquaculture, Poultry Houses and Energy). It does not switch real equipment. "Send Alert" and "Log Event" only write a line in the run log; no message is sent.

Step by step: use a template

1. Click **Automation** under **AI & Intelligence**, then the **Templates** tab.
2. Read the six templates: Soil Moisture Trigger, DO Emergency Aeration, Heat Stress Fan Trigger, Time-Based Schedule, Tank Low Alert, Cascade Irrigation.
3. Click **Use This Template**. It is added to the **Rules** tab as a disabled rule with blank device names.

Step by step: build your own rule

1. On the **Rules** tab click **New Rule**.
2. Fill in **Rule Name ***, **Category** (Irrigation, Aeration, Climate, Energy, Alert, Custom), **Trigger Logic** (ALL conditions (AND), ANY condition (OR), Scheduled), **Description** and **Cooldown (minutes)**.
3. Under **IF Conditions**, choose a condition type, type its value and (optionally) a device or zone name, then click **Add Condition**. Add as many as you need.
4. Under **THEN Actions**, choose an action, type the **Target device** and, where asked, **Duration (min)** and **Delay (min)**, then click **Add Action**.
5. Click **Create Rule**. It stays grey until the rule has a name, at least one condition and at least one action.

Conditions you can choose (14). Soil Moisture Below or Above; Tank Level Below or Above; Temperature Above or Below; DO Below; Ammonia Above; Humidity Above or Below; Time of Day Is; Day of Week Is; No Rain in Last (hours); Battery SOC Above.

Actions you can choose (14). Start or Stop Pump; Open or Close Valve; Start or Stop Aerator; Start or Stop Fan; Start or Stop Heater; Send Alert; Log Event; Start or Stop Generator.

Working with rules

- Use the category list at the top to filter the rules.
- Click the arrow on a rule to see its conditions, its actions in order, and its recent runs.
- **Run** appears only when the rule is switched on and its cooldown has passed. While the cooldown is running you see the minutes left. The cooldown only controls when **Run** is offered.
- The switch turns a rule on or off. The bin deletes it after you confirm.
- The **Run Log** tab lists every run with its result note.

> **Watch out:** The target name is matched as a piece of text. Typing "Pump 1" affects any pump whose name contains "pump 1". **A blank target matches every device of that kind**, so a template run with a blank target starts or stops all of them. Fill in the target before you press **Run**. The run log says it "worked" even when no device matched, for example when the other page has not saved any data yet.

Duration and delay values are shown on the rule but are not carried out (nothing waits, and nothing switches off after the duration).

On first open five sample rules are added (maize irrigation, pond aeration, poultry fans, morning irrigation, battery-first generator).

Device Gateway

Device Gateway

What it is for. A register of devices by family, with their status, battery, last reading, firmware and alerts. Subtitle: "Universal IoT device hub".

> **Watch out:** This is a **demonstration register**. It does not connect to hardware. A device you add shows **online** with **No readings yet**, and the page offers no way to enter or receive readings, to edit a device or to delete one. The 12 sample devices and 4 sample alerts are made-up.

> **Note:** It shares one saved device list with **Smart Devices** (see the note in that chapter).

Step by step: register a device

1. Click **Device Gateway** under **AI & Intelligence**, then **Add Device** (or the **Add Device** tab).
2. Fill in the form and click **Register Device**.

Field	What to enter
Device Name*	For example "Field C Soil Sensor"
Device Family*	Soil Sensor, Weather Station, Water Sensor, Camera, Aerator, Pump, Valve, Energy Meter, Cold Sensor, GPS Tracker, Custom
Model	For example "SoilPro 300"
Location*	For example "Field D"

Field	What to enter
Enterprise ID	Free text; leave blank to use your first enterprise
Battery % (or type "Wired")	A number, or the word Wired

The four tabs

Tab	What it shows
Overview	Tiles for Total Devices, Online, Offline, Low Battery (this also counts faults) and Active Alerts, a connectivity bar (the percentage online) and a card for each family
All Devices	A table with Name, Family, Location, Status (Online, Offline, Fault, Low Battery), Battery, Last Reading and Last Seen. Filter by family and status. Click a row to see all readings, the model and the firmware
Alerts	Alert cards with a severity and a **Resolve** button, and a **Refresh** button
Add Device	The registration form

> **Tip:** Alerts resolved here are the ones the **Notifications** page lists under "Devices".

Cold Chain

Cold Chain Monitor

What it is for. To keep records for cold rooms, grain silos and refrigerated trucks. A **cold chain** is the unbroken cold storage and cold transport that keeps fresh produce, milk and eggs safe. Subtitle: "Cold rooms · Grain silos · Refrigerated trucks".

What is real and what is not

Part	What you can do
Grain silos	Type real readings with **Log Reading** (temperatures, moisture, carbon dioxide). This is genuine manual entry
Refrigerated trucks	Type the truck's current temperature and status with **Update Temp & Status**
Cold rooms	Switch the compressor and door markers. The room temperature and humidity are fixed numbers; there is no box to update them
Alerts	Three sample alerts show on screen. New alerts are never created and there is no **Resolve** button

Two sample cold rooms, two silos, two trucks and three sample alerts are added on first open.

Overview tab. A red or amber banner for active alerts, three tiles (Cold Rooms with compressors on, Grain Silos fumigating, Trucks in transit), the cold room temperatures, the silo conditions and the truck list.

Cold Rooms tab

1. Click **Add Cold Room**.
2. Fill in **Room Name ***, **Target Temp (°C) ***, **Alert Threshold (°C) ***, **Capacity (units)** and **Products (comma-separated)**, then **Add Room**.
3. Use **Stop Compressor** or **Start Compressor**, and **Open Door** or **Close Door**. An open door shows a red "Door is open — temperature may rise" band, but the temperature number does not change.

The thermometer is green within 2 degrees C of the target, amber within 5 and red beyond that.

Grain Silos tab

1. Click **Add Silo** and fill in **Silo Name ***, **Grain Type ***, **Capacity (tonnes)** and **Current Stock (tonnes)**.
2. Click **Log Reading** on a silo. Type **Top Zone Temp**, **Middle Zone Temp**, **Bottom Zone Temp**, **Moisture (%)** and **CO2 (ppm)**, then **Save Reading**. A blank box keeps the old value.
3. **Start Fumigation** and **Stop Fumigation** mark a silo as being treated; the date of the last treatment is updated when you start.

Colours: a zone is green below 25 degrees C, amber 25 to 30 and red above 30. Moisture is red above 14 percent and amber above 13. Carbon dioxide is red above 600 ppm and amber above 500. The fill level bar turns amber above 70 percent and red above 90.

> **Tip:** Warm spots and rising carbon dioxide in a silo are early signs of mould and insects. Log a reading often during the wet season and keep maize moisture at 13 percent or below for safe storage.

Refrigerated Trucks tab

1. Click **Add Truck** and fill in **Truck Name ***, **Plate Number ***, **Driver Name**, **Cargo Description**, **Origin**, **Destination**, **Target Temp (°C)** and **Est. Arrival**. The truck starts as **Loading**.
2. Click **Update Temp & Status** on a truck card. Type the **Current Temp (°C)** and choose the **Status**: Loading, In Transit, Delivered or Idle. Then click **Update**.

Farm Gateway

Farm Gateway

Farm Gateway

What it is for. A demonstration of what a farm "gateway box" screen could look like: the connection status, a queue of data waiting to be sent, a history of sends and the box settings. Subtitle shows the gateway name and place.

> **Watch out: Farm Gateway does not connect to anything.** The firmware version, the uptime, the "12 connected" devices, the queue items and the history lines are made-up samples. Pressing **Force Sync All** does not send data anywhere; it just clears the pending lines and adds a "Success" line to the history. The **Offline Mode** switch only changes a label on this page. It does not change how the real app works when your internet is down.

The four tabs

Tab	What it shows
Status	The gateway card with **Go Offline** / **Go Online**, firmware, uptime, last heartbeat and device count; counts of Pending, Failed and Total items; **Force Sync All (n)**; a **Module Sync Status** list for Aquaculture, Water Quality, Poultry, Energy and Soil; a connection picture
Sync Queue	Waiting items with module, action (create, update, delete), the data text, how long ago, retries and status (pending or failed). **Retry** puts a failed item back to pending. **Clear All Resolved** removes failed items that were retried more than three times
Sync History	Success rate, items synced today, total records and a table of past sends
Configuration	**Gateway Name**, **Location**, **MQTT Broker**, **MQTT Port**, **Sync Interval (minutes)**, the **Offline Mode** switch and **Save Configuration**

The settings are saved on this device and can be changed, but they have no effect on any real equipment.

Marketplaces in the farm workspace

The **Marketplaces** section of the left menu has six pages. They look alike but work in two different ways:

Pages	Type	Real or sample?
AgriFood Market, AgriSupply, AgriServices	**Listing boards**: a left list of adverts and a detail panel on the right	Sample adverts, plus any adverts you post. All are **saved on this device only**
Agro Dealers, Equipment Hire, Vet Services	**Provider directories**: cards for businesses, with a profile pop-up and a request form	Real registered providers from the server when it can be reached; otherwise sample providers

> **Watch out:** There is **no shopping cart, no checkout and no payment** on any of these six pages in the farm workspace. There is also no page that lists your past orders or bookings, no "favourites" (saved items) button and no button to write a review. You contact the seller by phone, or you send a request that the provider answers by phone (see below). If you want to sell to other users, use a vendor workspace (see Part 6 — Vendor Workspaces: Basics, Vet Services, Equipment Hire, Transport and AgriServices and Part 7 — Vendor Workspaces: Agro Dealers, AgriSupply, AgriFood Sellers and Processors).

AgriFood Market

AgriFood Market

What it is for. A board of food adverts: poultry, livestock, fish, vegetables, fruit, grains, dairy, eggs and processed foods. You can browse what others have listed and post your own advert to sell produce.

Before you start. You need the **Marketplace** permission. Remember that the adverts are on **this device only**: people on other phones cannot see your advert.

Step by step: browse and search

1. Click **AgriFood Market** under **Marketplaces**.
2. On the **Browse** tab, type in **Search listings…** to look in titles and descriptions.
3. Use the category list. For this page it holds: **Poultry**, **Livestock**, **Fish & Seafood**, **Vegetables**, **Fruits**, **Grains & Cereals**, **Dairy**, **Eggs**, **Processed Foods**, **Other**.
4. Click an advert to open it on the right (on a phone it fills the screen; the X closes it).
5. To contact the seller, tap the phone number or the **Call Seller** button.

What you will see on an advert

Item	Meaning
Title, category	What is for sale
Price and unit	For example 58 per bird. "negotiable" appears if the seller allows a bargain
Available	Quantity on offer
Description	Details from the seller
Seller	Name, phone number, location and the date posted
Tags	Short words such as organic, fresh, bulk

The top of the list shows the number of adverts you can browse. Your own adverts never appear on the **Browse** tab; they appear on **My Listings**.

Step by step: post your own advert

1. Click **Sell Food** (top right of the list).
2. Fill in the window **Post New Listing** (below) and click **Post Listing**. The button stays grey until the title and price are filled in.
3. Open the **My Listings (n)** tab to see it.

Field	What to enter
Title*	For example "Broiler Chickens – 500 birds ready"
Category	Pick from the list
Price* and Unit	For example 58 and "bird" (the unit starts as "kg")
Quantity Available	How many units you have
Location	For example "Lusaka"
Description	What you are selling
Your Name	Shown as the seller (blank becomes "Me")
Phone	The number buyers should call
Tags (comma-separated)	For example "organic, fresh, bulk"
Price negotiable	Tick if you accept offers

Managing your adverts. Open one of your adverts and use the buttons under the price:

- **Edit** changes the title, price, unit, available quantity, description, location, phone and the negotiable box (not the category).
- **Mark as Sold** sets the advert to sold. It stays on **My Listings** with a green "Sold" label and the note "This listing is marked as sold and hidden from the public browse feed." Edit and Deactivate are then no longer offered.
- **Deactivate** hides the advert; **Reactivate** brings it back.
- **Delete** asks you to click **Confirm Delete**.

Good to know

- The six sample adverts (broilers from KwaZuma Farms, tilapia, tomatoes, maize, milk, honey) are examples with example phone numbers.
- Selling real produce through the platform is done from a vendor workspace (see Part 7).

If something goes wrong

- "No listings found." Clear the search words and set the category to "All Categories".
- "You have no listings yet." Post your first advert.

AgriSupply

AgriSupply

What it is for. The same listing board, for farm inputs: seeds, feed, fertiliser, chemicals, medicines and vaccines, day-old chicks, fingerlings, equipment, irrigation, storage, packaging.

Step by step. The steps are exactly those of **AgriFood Market** (search, category list, open an advert, **Call Seller**, **My Listings**). The posting button is **Sell Inputs** and the unit starts as "bag".

Categories: Seeds, **Animal Feed**, **Fertiliser**, **Chemicals & Pesticides**, **Medicines & Vaccines**, **Day-Old Chicks**, **Fingerlings**, **Equipment**, **Irrigation**, **Storage**, **Packaging**, **Other Inputs**.

Sample adverts. Seven examples (maize seed, broiler starter feed, NPK fertiliser, a solar pump, Newcastle vaccine, a drip kit, day-old broiler chicks). Prices are examples only.

> **Tip:** Always check the batch and expiry date of seed, vaccines and chemicals before you buy, and ask the seller for a receipt.

AgriServices

AgriServices

What it is for. The same listing board, for services you may need: vets, agronomists, transport, equipment hire, drone spraying, cold storage, irrigation work, accounting, training and labour.

Step by step. The steps are those of **AgriFood Market**. The posting button is **Offer Service** and the unit starts as "visit". Prices on a service advert are per visit, day, hour, trip, hectare, week, month or project, as the seller chooses.

Categories: Veterinary, **Agronomy**, **Transport**, **Equipment Hire**, **Aerial Services**, **Storage**, **Irrigation Services**, **Finance & Accounting**, **Training**, **Labour**, **Other Services**.

Sample adverts. Eight examples (a mobile vet, a crop scouting consultant, a 5-ton truck, tractor hire, drone spraying, cold-store space, irrigation installation, accounting and tax for farmers).

Agro Dealers

Agro Dealers

What it is for. A directory of shops that sell farm inputs (seed, fertiliser, chemicals, feed, equipment), with their prices, certificates and reviews, and a form to send an enquiry. The header says "Find & connect with verified providers".

Before you start. You need the **Marketplace** permission. For real providers your device must be able to reach the server. If it cannot, a yellow bar says "Showing sample data — connect to AgroNexus backend to see live provider profiles" and the cards are examples. While the list is loading a blue bar says "Loading provider directory…".

Step by step: find a dealer

1. Click **Agro Dealers** under **Marketplaces**. The **Browse All** tab opens.
2. Type in **Search providers...** (it looks in the name, tagline, description and tags).
3. Choose a district in **All Districts** (the list is built from the districts the providers cover).

4. Choose a category in **All Categories**. For Agro Dealers the categories are **Seeds**, **Fertiliser**, **Chemicals**, **Animal Feed**, **Equipment**, **Day-Old Chicks**, **Solar & Irrigation**, **Subsidised Inputs**.
5. Click a card to open the profile.

> **Note:** The category filter works on the services listed for each provider. If a live provider shows no services in the pop-up (see "Good to know"), choosing a category hides that provider.

What a card shows. Name, tagline, location with up to two coverage districts, a **Verified** badge (the business was checked) and a **Certified** badge (it lists certificates), a star rating with the number of reviews, three tags, the first two services with their price (for example "K650 per 50kg bag") and **View Profile**. Your own listing has a green **My Business** label.

The profile pop-up. It has a header with badges and rating, a contact strip (location, phone, email, website, opening hours, licence number) and four tabs:

Tab	What it shows
Overview	Description, **Coverage Areas**, tags and, for dealers, the **Specialist crops / products**
Services (n)	Each service with its description, price ("POA" means price on application, ask the dealer), unit, category and **Available** or **Unavailable**
Reviews (n)	The average rating and each review: reviewer, how long ago, stars, comment and the service used
Certifications	Body, type, number and expiry date of each certificate

The footer has **Call**, **Email**, **Website** (if there is one), **Book / Enquire** (not on your own listing) and, for verified providers, a **Video Call** button for a live consultation.

Step by step: send an enquiry

1. In the profile, click **Book / Enquire**. The window is called **Send Enquiry**.
2. Type what you need, with quantities, place and timing.
3. Click **Submit Request**. The window shows "Request submitted!" and "NAME will contact you on PHONE."

> **Watch out:** After you click **Submit Request** the screen always shows a friendly success message, even when the request could not be delivered (for example when you are offline, or when the provider is only a sample). The message then reads "Enquiry saved — provider will contact you shortly." but nothing may have been sent. A reference starting with **HB-** or **VA-** means the server really accepted the request. In every case, also **Call** the dealer. In this version the text of an enquiry may not be stored by the server, so phone to confirm the details.

Register your own dealership. Click **Register your dealership** (top right). Fill in **Business Name ***, **Tagline**, **Phone ***, **Email**, **Website**, **Location ***, **Districts (comma-separated)**, **Operating Hours**, **License Number**, **Tags (comma-separated)** and **Description**, then **Save Listing**. It appears on the **My Listings** tab with a green **My Business** label.

> **Watch out:** A listing registered here is kept **on this device only**. It is not sent to the server, other users cannot find it, and it has no services or reviews. The **Edit** button in the profile does nothing. To appear to other users, register your business as a vendor (see Part 7).

Good to know

- Sample dealers (six examples such as AgriInput Distributors, FeedMills Zambia, ZamPoultry Hatchery) are shown only when the server cannot be reached.

- For live providers, the Services, Reviews and Certifications tabs may show "No services listed yet.", "No reviews yet." or "No certifications uploaded." even when the dealer has entered them, because this farm screen shows only the headline details of a live provider. The rating and number of reviews on the card are still correct. Call the dealer for prices.
- Reviews come from approved reviews only. There is no button to write a review from the farm workspace.
- "No providers match your search." means your filters are too narrow. Clear them. If the server is reachable but no business of that type has registered yet, the list is also empty.

Equipment Hire

Equipment Hire

Equipment Hire

What it is for. A directory of businesses that hire out tractors, ploughs, harvesters, sprayers (including drones), irrigation pumps and pivots, with a booking form.

Step by step: find equipment

1. Click **Equipment Hire** under **Marketplaces**.
2. Search, choose a district and choose a category exactly as described under **Agro Dealers**. The categories here are **Land Prep**, **Planting**, **Spraying**, **Harvesting**, **Irrigation**, **Transport**, **Conservation**, **Mapping**.
3. Open a card to read the services and rates (for example "per ha", "per day", "per month"). The Overview tab may also show a **Mobile service** label (the owner comes to your farm) and the opening hours.

Step by step: request a booking

1. In the profile click **Book / Enquire**. The window is called **Book Equipment**.
2. Fill in the form and click **Submit Request**.

Field	What to enter
Start Date*, End Date*	The days you need the machine (both start as today)
Hectares (optional)	The area to be worked
Delivery / Site Address	Your farm location or GPS point
Notes	Equipment type, soil conditions, special needs

1. When the server accepts the request you see "Request submitted!" with a reference such as **HB-...**. The provider's record starts at the status **enquiry** and the provider contacts you on your phone to quote and confirm. The same warning applies as for Agro Dealers: if the message does not show a reference, phone the provider.

Register your equipment business. The button is **List your equipment**. The form and the "this device only" warning are the same as for Agro Dealers.

Good to know

- Five sample hire providers (FarmMech Services, AgroDrone Zambia, Harvest Solutions Zambia, IrriTech Hire, Musika Farm Equipment Hire) show when the server cannot be reached. Rates and licence numbers are examples.

- There is no deposit, payment or confirmation step on the farm side. Agree rates, the deposit and the dates with the provider by phone.
- To follow up a booking use the reference number and the provider's phone number, because the farm workspace has no list of your bookings.

Vet Services

Vet Services

What it is for. A directory of vets and animal health providers: mobile vets, clinics, aquaculture specialists, para-vets and remote consultation. You can request an appointment or start a video call.

Step by step: find a vet

1. Click **Vet Services** under **Marketplaces**.
2. Search, choose a district and choose a category as under **Agro Dealers**. The categories here are **Consultation**, **Vaccination**, **Diagnostics**, **Laboratory**, **Surgery**, **Biosecurity**, **Teleconsultation**, **Nutrition**, **Breeding**, **Water Quality**.
3. Open a card. The Overview tab may show the **coverage type**: **Mobile service** (comes to the farm), **Clinic-based** or **Teleconsultation**, and what the vet treats.

Step by step: book an appointment

1. In the profile click **Book / Enquire**. The window is called **Book Vet Service**.
2. Fill in the form and click **Submit Request**.

Field	What to enter
Service Type*	General Consultation, Vaccination, Treatment / Procedure, Diagnosis / Lab, Deworming, Pregnancy Check, Teleconsultation (Remote), Other
Appointment Date*	The day you want (starts as today)
Species	For example "Broilers" or "Tilapia"
Animal Count	How many animals are affected
Symptoms / Reason	What you see
Additional Notes	Anything else (this box may not be stored by the server)

1. On success you see "Request submitted!" and a reference such as **VA-...**. The request starts with the status **requested**, and the vet confirms by phone. If the message is "Appointment request saved — provider will confirm." with no reference, the request may not have reached the vet. Call to be sure.

Video Call. For vets and other verified providers the footer has a **Video Call** button. Click it to start a video consultation with the provider (the button shows "Starting…" while it connects).

> **Watch out:** If an animal is very sick, do not wait for an online request. Phone the vet or the nearest Department of Veterinary Services office at once. Newcastle disease and several other animal diseases must be reported to the Department.

Register your practice. The button is **Register your practice**; it works as described under **Agro Dealers** (this device only; use a vendor workspace to be found by farmers, see Part 6).

Good to know

- Five sample practices (AgriVet Zambia, Central Veterinary Clinic, Aqua Health Vets, Para-Vet Rural Services, TeleFarm Vet) show when the server cannot be reached. Fees are examples.
- Record the visit afterwards in **Animal Health** (see that chapter) and, to keep the cost, in Finance.

Which page for which job

Farm job	Page	Tab or button to use
Record a vaccination	Animal Health	**Vaccinations**, then **Add Vaccination**
Record a medicine given, with a withdrawal period	Animal Health	**Treatments**, then **Add Treatment**
Log a vet's visit and fee	Animal Health	**Vet Visits**, then **Add Vet Visit**
See which vaccinations are due or overdue	Animal Health	**Overview**, **Upcoming Vaccinations**
Know the date I can sell after a medicine	Animal Health	**Overview**, amber "Withdrawal period active" banner
Put the cost of a vaccination or treatment into Finance	Production (cycle events)	Record the event (see Part 3)
Keep a list of workers and their roles	Staff & Labour	**Directory**, **Add Employee**
Give a worker a real login and permissions	Team & Permissions	See Part 1
Keep a list of suppliers	Procurement	**Suppliers**, **Add Supplier**
Raise a purchase order	Procurement	**Orders**, **Add Order**
Mark an order as delivered or paid	Procurement	**Orders**, **Mark Delivered** / **Mark Paid**
Ask the supervisor for feed or medicine	Requisitions	**New Request**, **Submit Now**
Approve or reject a stock request	Requisitions	**Pending Review**, **Approve** / **Reject**
Plan which crop follows which	Crop Rotation	**Overview** and **Planner**
Record what grew in a field last season	Crop Rotation	**Log Season**
See open alerts from device pages	Notifications	Status **Unresolved**
See today's feed and water plan	Smart Engine	**Per-Cycle Smart Recommendations (Today)**
See disease watch and the cycle calendar	AI Insights	**Disease Alerts**, **Crop Calendar**
See profit for one production cycle	Financial AI	**P&L**
See where my money goes (cost split)	Financial AI	**Costs**
Find how many units I must sell to break even	Financial AI	**Break-Even**
Keep track of a bank loan	Financial AI	**Loans**, **Add Loan**, **Record Payment**
Get a real forecast for my farm	Weather	**Stations**, then **Sync now**, then **Forecast**
Check crop greenness from satellite	Weather	**Fields & NDVI**
Record carbon, water, certificates and compliance tasks	Sustainability	**Carbon**, **Water**, **Certifications**, **Compliance**
Keep a list of my sensors	Smart Devices (or Device Gateway)	**All Devices**, **Add Device**
Log a tank level	Water Mgmt	**Tanks**, **Update Level**

Farm job	Page	Tab or button to use
Log pond feeding, water change or fish deaths	Aquaculture	**Feed**, **Log Water Change**, **Log Mortality**
Log eggs collected, poultry feed or bird deaths	Poultry Houses	**Collect Eggs**, **Feed Record**, **Mortality**
Log irrigation applied to a field zone	Soil Depth	**Log Irrigation**
Log grain silo temperature and moisture	Cold Chain	**Grain Silos**, **Log Reading**
Log a refrigerated truck's temperature	Cold Chain	**Refrigerated Trucks**, **Update Temp & Status**
Try out an IF/THEN rule	Automation	**Templates**, then **Run**
Look at energy use as an example	Energy	**Overview**, **Analytics** (sample data)
Buy seed, feed or fertiliser	Agro Dealers or AgriSupply	Open a provider or advert, **Call**
Hire a tractor or drone	Equipment Hire	**Book / Enquire**
Book a vet or ask for advice	Vet Services	**Book / Enquire** or **Video Call**
Sell produce on a local board	AgriFood Market	**Sell Food** (this device only)
Back up everything on this device	Backup & Restore	See Part 1

Part 6 — Vendor Workspaces: Basics, Vet Services, Equipment Hire, Transport and AgriServices

This part explains the workspace you get when your business is **not** a farm or a cooperative. A "vendor" here means any business that sells a service or a product to farmers: a vet practice, an equipment-hire company, a haulage firm, an agro-dealer, a processor and so on.

Part 6 has five chapters.

- Chapter 1 explains everything that is the same for every vendor type: how the workspace is created, the screen layout, and the six tabs every vendor has (Clients, Invoices, Revenue, Marketplace Listing, Users & Permissions and Settings). Read this chapter first, whichever vendor type you are.
- Chapter 2 covers **Vet Services**.
- Chapter 3 covers **Equipment Hire**.
- Chapter 4 covers **Transport & Logistics**.
- Chapter 5 covers the **AgriServices Provider**.

Agro Dealers, AgriSupply, AgriFood Sellers and Processors have their own tabs and are described in Part 7 — Vendor Workspaces: Agro Dealers, AgriSupply, AgriFood Sellers and Processors. Those workspaces also use the common tabs described in Chapter 1, so Part 7 refers back here.

Chapter 1 — Vendor workspace basics (applies to every vendor type)

Who gets a vendor workspace

When you register a business account you choose a **business type**. The business types are:

Business type	Workspace you get
Farmer / Farm, Cooperative	The farm workspace (see Parts 2 to 5), not a vendor workspace
Vet / Animal Health	**Vet Services** (Chapter 2)
Equipment Hire	**Equipment Hire** (Chapter 3)
Transport / Haulage	**Transport & Logistics** (Chapter 4)
AgriServices Provider	**AgriServices** (Chapter 5)
Agro Dealer	**Agro Dealer** (Part 7)
AgriSupply Provider	**AgriSupply** (Part 7)
AgriFood Seller	**AgriFood Seller** (Part 7)
Agro Processor	**Agro Processor** (Part 7)

You are taken to your vendor workspace automatically after you finish the sign-up and set-up steps (see Part 1 — Getting Started and Your Account). You do not choose it from a menu. If you are signed in with a business type that is not one of these, the app falls back to the Agro Dealer workspace.

> **Note:** The business type is chosen when the account is created. If you picked the wrong one, ask your AGRINUXES contact to correct it, because the tabs you see depend on it.

Your workspace is created for you on first sign-in

What it is for. Every vendor workspace is built around a *marketplace profile* (the app calls it a "provider profile"). This is the public face of your business: name, district, description, services, certificates. You do not have to create it by hand.

What happens the first time you open the workspace.

1. The page shows **Setting up your business workspace…** for a moment.
2. The app looks for a profile that belongs to your company. If none exists, it creates one from your business details.
3. The new profile takes your company name as its business name, your company district as its district, and lists your district as the only district you serve. Its marketplace category is chosen from your business type (see the table below). Its status is **Active**.
4. Your workspace opens on the **Overview** tab.

The marketplace category is picked like this:

Your business type	Marketplace category created
Vet / Animal Health	Veterinary Services
Equipment Hire	Equipment Hire
Transport / Haulage	Transport & Logistics
AgriServices Provider	Agricultural Services
Agro Dealer, AgriSupply Provider	Agro Dealer / Input Supplier
Agro Processor	Agro Processing
AgriFood Seller	AgriFood Seller / Fresh Produce

Good to know

- There is one profile per company. Everyone on your team who signs in sees the same profile and the same records.
- Your profile is created with status **Active** straight away, so it can appear in farmer searches before you have filled anything in. Complete it quickly (see "Marketplace Listing" below).
- Everything in a vendor workspace is saved to the company account, shared by all your team members, on any device. Nothing in these tabs is kept only in your browser.

If something goes wrong

What you see	What it means
A red banner at the top of the page with a message	The workspace could not load its data. Check your internet connection and reload.
A red box saying "This tab hit an error: … Try another tab or reload."	One tab failed. Click a different tab, or reload the page.

The screen layout

The sidebar (left).

- At the top is a menu button (three lines). Click it to shrink the sidebar to icons only, or open it again.
- Next to it you see **AGRINUXES** and, under it, your vendor icon and business name.
- Below that is the list of tabs for your business type. The tab you are on is highlighted in green. Click any tab to open it.
- At the bottom is **Sign Out**.

The top bar. It shows where you are, for example "Vet Services / Appointments". On the right it shows your district. If you have not set a district it says **Set your district in Settings**.

The work area. The selected tab is shown here. Forms open as pop-up windows. When you save, delete or change something, a small green message (or red, if it failed) appears at the bottom right of the screen for a few seconds, for example "Saved." or "Business profile saved."

Tab order. Each vendor type has its own tabs first, then the same six common tabs in this order: **Clients**, **Invoices**, **Revenue**, **Marketplace Listing**, **Users & Permissions**, **Settings**.

> **Tip:** On a phone, use the menu button to collapse the sidebar so the tables have more room, and scroll tables sideways to see all columns.

How statuses, colours and reference numbers work

Throughout the vendor tabs, a status appears as a small coloured label. The colour groups are:

Colour	Typical statuses
Blue/sky	New, Requested, Enquiry, Received
Indigo	Quoted, Sent
Blue	Confirmed, Scheduled, Packed
Amber	Active, In progress, Processing, Out for delivery, Pending
Green	Completed, Delivered, Paid, Valid
Red	Cancelled, No show, Void, Rejected, Expired, Overdue, Suspended
Grey	Draft, Sold out, Inactive

Each record gets an automatic reference number made of a prefix, the year and a running number:

Record	Looks like
Invoice	INV-2026-0001
Vet appointment	VA-2026-0001
Equipment hire booking	HB-2026-0001
Job (service or transport)	JOB-2026-0001
Sales order (dealers, suppliers, sellers)	SO-2026-0001
Processing lot	LOT-2026-0001

> **Note:** The running number counts every record of that kind on the whole platform for the year, not only yours. Your first invoice will therefore not be "0001". This is normal. Numbers can have gaps from your point of view.

Overview (the first tab of every vendor type)

Each vendor type has its own Overview with its own four figures, described in the chapter for that type. They all share the same layout.

What you see

- **Title line:** the name of your workspace, then your business name, district, business type, and "verified" if the platform has verified you. A status label (usually **Active**) and, once you have reviews, a star rating with the number of reviews, for example "4.6 (12)".
- **Four figure cards** across the top (different for each vendor type).
- **Revenue received (last 6 months):** a bar chart with one bar per month, the current month on the right. On the right of the card title are two figures: the total received **year to date** (since 1 January) and received in the **last 30 days**. Under the chart you see how much came from each source, for example "Vet: ZMW 4,200.00". Until you record a payment, the chart says "No paid invoices, bookings or orders yet. Revenue appears here as payments are recorded."
- **Quick actions:** four buttons that jump to a tab. Below them are short reminders that appear only when they apply:
  - the number and total value of unpaid invoices;
  - follow-ups due within 7 days (vet);
  - machines due for service (equipment and transport);
  - listings low on stock (dealers and sellers; Part 7);
  - "Add a phone number in Settings so customers can reach you" if your phone is empty.
- A table of upcoming work (different for each vendor type).

> **Tip:** Make the Overview the first thing you open each morning. The reminders list is your to-do list.

Clients

What it is for. A list of everybody you have dealt with, built automatically. You do not type clients in here.

Before you start. Nothing to set up. Clients appear as you record work.

Where clients come from. A client is added the first time you record any of these for them: a vet appointment, an equipment hire booking, a job, a sales order, or (for processors) a supplier of raw material. A client is either:

- a **platform client**, a farm or cooperative with an AGRINUXES account, whom you picked from the search box; or
- a **walk-in**, someone you typed in by name and phone. Walk-ins with the same name (capital letters ignored) are combined into one client.

What you will see. A heading "Clients" with the count, and a table:

Column	Meaning
Client	Name, and below it the phone number. If there is no phone it says "platform account" or "walk-in".
Type	The client's business type if they are a platform client, otherwise a dash.
District	The client's district if known.
Interactions	How many records you have for them, plus the kinds, for example "3 hire, vet".
Last	The date of the most recent record.

Column	Meaning
Total value	The sum of the agreed or total amounts on all their records.
Outstanding	The part of that total that is not yet marked paid (amber when above zero).

The list is sorted with the most recent client first. If it is empty it says "No clients yet — they appear as you record bookings, appointments, jobs, orders or supplies."

Good to know

- You cannot edit or delete a client. To change a name, correct it on the record itself.
- *Outstanding* is worked out from the records (appointment, booking, job, order), not from invoices. A record counts as paid when its "paid" box is ticked, or when an invoice linked to it is marked paid.
- The figure labelled **Paying clients** on the Revenue tab is simply the number of clients in this list.

The client picker (used in every "new" form)

Every form that needs a client (new appointment, booking, job, order, invoice) uses the same picker. It has two parts side by side.

1. **Search platform client (farm / coop)…** — type at least two letters of the client's name. After a short pause, up to ten matching farm and cooperative accounts are listed with their district and business type. Click one to choose it. The name then appears locked in the box. Click **clear** to undo.
2. **or walk-in name *** and **Phone** — for a customer without an account, type the name (required) and a phone number (optional). When a platform client is chosen, the walk-in name box is disabled and says "Platform client selected". You can still type a phone number.

If something goes wrong

Message	What it means
Give a client organisation or a client name	You left both the search and the walk-in name empty.
Client organisation not found	The platform client you picked no longer exists. Search again.

> **Note:** The search only finds farm and cooperative accounts, not other vendors, and never your own company.

Invoices

What it is for. To bill a client and track who has paid. Invoices work the same in every vendor type. You can write one from scratch or create it straight from an appointment, hire booking or job.

Before you start. Have the client (platform or walk-in) and the lines to bill. Decide what to write under **Notes / payment details**, for example your Mobile Money number or bank details, because the client sees these on the invoice.

What you will see on the Invoices tab

Four cards at the top:

Card	Meaning
Invoices	The total number of invoices.

Card	Meaning
Awaiting payment	How many are **Sent** or **Overdue**, and their total value.
Overdue	How many are overdue.
Paid	How many are paid, and their total value.

Below is the **Invoices** table with a **+ New invoice** button:

Column	Meaning
Ref	The invoice number. Click it to open a printable view.
Client	Platform client name, or the walk-in name, or "Walk-in".
Issued / Due	Issue date and due date.
For	The reference of the appointment, booking, job or order it was created from, if any.
Total	Amount including tax, in ZMW.
Status	Draft, Sent, Paid, Overdue or Void.

The last column holds action buttons that depend on the status (see below).

Step by step: create an invoice from scratch

1. Open **Invoices**.
2. Click **+ New invoice**. A window **New invoice** opens.
3. Choose the client with the client picker (see above).
4. Fill in the first line: **Description**, **Qty** (quantity, starts at 1) and **Unit price**.
5. To add more lines, click **+ Add line**. To remove a line, click the **×** at its right. Lines with an empty description are ignored.
6. In **Tax / VAT amount** type the tax as an *amount in kwacha*, not a percentage. It starts at 0.
7. Choose a **Due date**. If you leave it empty, the due date is set to 14 days after the issue date.
8. In **Notes / payment details** write how the client should pay.
9. Watch the line at the bottom: **Subtotal** (sum of quantity × unit price) and **Total** (subtotal plus tax).
10. Click **Save draft**. The invoice is saved with status **Draft** and a number such as INV-2026-0014. The issue date is today.

Step by step: create an invoice from a record

1. Open the appointment (Vet), booking (Equipment Hire) or job (Transport, AgriServices) tab.
2. On a record that is **Completed** and not yet paid, click **Invoice**.
3. A window named "Invoice for [reference]" opens. The client and lines are taken from the record. For example a hire booking becomes one line "Hire of [machine] [start date] → [end date]" priced at the agreed amount (or the quoted amount if there is no agreed amount). Add lines in the window only if you want to *replace* the automatic ones.
4. Add tax, due date and notes if you wish, then click **Save draft**.

Step by step: send and collect payment

1. A **Draft** invoice shows three buttons: **Send**, **Edit** and **Delete**.

2. Click **Send** when you hand the invoice to the client. The status changes to **Sent** and the message "Invoice INV-… marked sent." appears. In this version, **Send** only changes the status; it does not email or text the client. Click the invoice number and use **Print** (it uses your browser's print dialog, so you can also save a PDF) or read the details out.
3. A **Sent** or **Overdue** invoice shows **Mark paid** and **Void**.
4. When money arrives, click **Mark paid**. A list **Payment method** appears with **Cash**, **Mobile Money**, **Bank**, **Card** and **Voucher**. Choose one and click **Confirm paid** (or **Cancel**).
5. The invoice becomes **Paid** with today's date as the payment date. If it was linked to an appointment, booking, job or order, that record is also marked paid.
6. Use **Void** to cancel an invoice that was issued by mistake. Voiding cannot be undone.

Statuses

Status	What it means	What you can do
Draft	Written but not given to the client.	Send, Edit, Delete
Sent	Given to the client, waiting for payment.	Mark paid, Void
Overdue	Was Sent and the due date has passed. The app sets this itself when you open the Invoices tab.	Mark paid, Void
Paid	Money received.	Nothing; the invoice is locked.
Void	Cancelled.	Nothing; the invoice is locked.

The invoice view. Clicking a number opens the invoice: your business name, "Invoice to" with the client name and phone, issue and due dates, status, the reference of the linked record, the lines (description, quantity, unit price, line total), subtotal, tax, total, the payment date and method if paid, and your notes. Buttons: **Print** and **Close**.

Good to know

- A draft has to be **Sent** before it can be marked paid; there is no shortcut from Draft to Paid.
- Only drafts can be deleted. After that, void.
- Paid and void invoices cannot be edited.
- The currency is ZMW.
- After you create an invoice from a completed record, the **Invoice** button on that record stays visible until the record is marked paid. Check the Invoices tab before you click it a second time, or you will create a duplicate.
- A vet invoice adds each medication as an extra line at price 0, so the client can see what was used. The money is on the consultation line.
- If a record has no amount (no agreed, quoted, total or fee amount), an invoice made from it has a line priced at 0. Edit the draft and enter the real price.

If something goes wrong

Message	What it means
An invoice needs at least one line	You saved with no description filled in.
Item quantity and unit price must be numbers	A line has text where a number should be.
Item values cannot be negative	A quantity or price is below zero.

Message	What it means
Paid or void invoices cannot be edited	The invoice is locked. Create a new one.
Only draft invoices can be deleted — void it instead	Use **Void** on a sent invoice.
Linked record not found	The appointment, booking or job was removed.

Revenue

What it is for. To see the money you have actually received. It counts cash in, not work still waiting to be paid.

What you will see

Four cards:

Card	Meaning
Last 30 days	Money received in the last 30 days.
Year to date	Money received since 1 January.
Outstanding	Total of invoices that are Sent or Overdue, and how many there are.
Paying clients	The number of clients in your Clients list.

Below are:

- **Monthly revenue received:** a bar chart for the last six months, with a list of the six monthly totals under it.
- **By source:** the total for each kind of income, biggest first. Sources are Invoice (unlinked), Vet, Hire, Job and Order.
- **Recent payments:** a table of your 20 most recent paid invoices with date, invoice number, client, payment method and amount.

How the revenue figure is worked out. The app adds up four kinds of paid items:

1. Every **Paid invoice**, counted on the day it was paid.
2. Every vet appointment ticked **Paid in full** that has a total amount and is *not* already covered by a paid invoice, counted on the appointment date.
3. Every hire booking ticked **Paid in full** that has an agreed amount and is not covered by a paid invoice, counted on the booking's end date.
4. Every job ticked **Paid** that has an agreed amount, and every paid sales order, that is not covered by a paid invoice. Jobs are counted on the completion date, orders on the delivery date.

A paid invoice always wins over the record it was made from, so nothing is counted twice.

> **Watch out:** A "Paid" tick on its own does not add to Revenue unless the record also has an amount (agreed amount for bookings and jobs, total charge for appointments). Always fill in the money amount.

> **Note:** The Revenue tab does not include income from outside AGRINUXES records, and it does not subtract expenses. The Recent payments table lists paid invoices only, not paid records that were never invoiced.

Marketplace Listing (your public profile)

What it is for. To control what farmers and buyers see about your business. The tab is called **Marketplace Listing**, and the text on it says everything below the first card is public.

What you will see, from top to bottom

1. **Public marketplace profile** card, a preview:
   - business name, tagline (or "No tagline yet — add one in Settings");
   - marketplace category, district, the districts you serve, and, if you tick them in Settings, "comes to the farm" and "emergency calls";
   - your description;
   - on the right: your status, your verification state, your rating, number of reviews and number of bookings.
1. A services card (**Services & fees**, **Other services**, **Routes & rates**, **Services offered** or **Services & rates**, depending on your type). See "Services and prices" below.
2. **Certifications & licences.**
3. **Customer reviews.**

Verification. A tick "Verified by AGRINUXES" appears only after a platform administrator has checked your certificates. Until then the card says "Not yet verified — verification is done by platform admins after checking certifications." You cannot verify yourself. A profile that is not verified is still listed and can still receive bookings.

To change the preview text (tagline, description, phone, district and so on) use the **Settings** tab. This tab only shows it.

> **Tip:** Treat this tab as your shop window. Before you tell farmers about AGRINUXES, open it and ask: "If I were a farmer in my district, would I know what this business does, where, and what it costs?"

Services and prices

What it is for. The list of services (or products) you offer with prices. In the Vet and AgriServices workspaces the same list also has its own tab (**Services Catalog**), and the same entries appear in both places.

Step by step

1. Click **+ Add** at the top right of the services card.
2. Fill in the window **Add service / product**:

Field	What to enter
Name *	Required. For example "Farm visit" or "Ploughing".
Category	Free text, for example "Vaccination".
Pricing model	How the price works. Choices below. A new service starts as **Negotiable / quote**.
Price	The amount in ZMW.
Price max (range)	The top of a range, if the price varies, for example 400 to 600.
Unit label (e.g. 50 kg bag)	Words that explain the unit, for example "per 1,000 birds" or "per trip".
Lead time (days)	How many days notice you need. Empty means "Immediate".
Available	Tick when you can currently provide it.
Description	A short explanation farmers will read.

1. Click **Save**. The message "Saved." appears.

The **Pricing model** choices are:

Choice	Use it when
Fixed price	One price for the whole service.
Per unit	Price per item or bag; use the unit label to say which.
Per hectare	Priced per ha (ploughing, spraying).
Per head / animal	Priced per animal (vaccination).
Per hour	Priced per hour of work.
Per day	Priced per day.
Per km	Priced per kilometre (transport).
Negotiable / quote	You give a quote for each job.
Free	No charge.

What the table shows: service name and description, category, pricing (for example "ZMW 350.00 – 500.00 Per head / animal · per 1,000 birds"), lead time, a tick under **Available**, and **Edit** and **Delete** buttons. **Delete** asks "Delete [name]? This cannot be undone."

Good to know

- The currency is ZMW and cannot be changed in the form.
- There is no "per tonne" choice. For tonnes, choose **Per unit** and write "tonne" in the unit label, or choose **Fixed price** and write "per trip".
- When you start a job, you can pick a service from this list to fill in the job title and quoted price (AgriServices; see Chapter 5).

Certifications and licences

What it is for. To show the papers that prove you are allowed to do your work, for example SCCI, ZABS, VRAZ, ZEMA, or the Veterinary Board registration. Buyers and programmes look for these.

Step by step

1. Click **+ Add** in the **Certifications & licences** card.
2. Fill in the window **Certification**:

Field	What to enter
Certificate name *	For example "Veterinary Practice Licence".
Issuing body	The organisation that issued it.
Certificate number	The number on the paper.
Issued / Expires	Dates.
Document link	A web link to a scan or photo, if you have one stored online.

1. Click **Save**.

What the table shows: certificate, issuing body, number, expiry date, a **Status** label (Valid, Expired or Pending), **Verified** (shows "platform" when an administrator has checked it) and **Edit / Delete**.

Good to know

- If you enter an expiry date that has already passed, the app sets the status to **Expired** when you save.
- The form has no status box. A new certificate starts as **Valid**.
- You cannot upload a file in this form. The *Document link* is a web address only.
- Only a platform administrator can mark a certificate "verified".

Customer reviews

This card lists reviews farmers have written about you: stars, title, text, the farm's name, the date, and either **published** or **awaiting moderation**. Reviews are published only after the platform moderates them. Until then they are visible to you but not to buyers. With no reviews it says "No reviews yet. Customers can review you after a booking or appointment; reviews are published after platform moderation." Each farm can leave one review per provider, and a new review from the same farm replaces its earlier one.

Users & Permissions

What it is for. To give your staff their own logins and decide what each can do. This is the same screen used in the farm workspace (see Part 1 — Getting Started and Your Account, and Part 4 — Running the Farm Business for the full description). This section covers what is particular to vendors.

Who sees it. The tab only appears for people whose permissions include "Team & Permissions". A company director (the account owner) and any administrator always see it. Other people may not see the tab at all.

What you will see. A page **Team & Permissions** with three small tabs:

- **Members** — add people, change a person's role and branch, make or remove an administrator, deactivate or reactivate, and open a person's permission table (shield button). Choose **Add member**, then enter full name, phone (used to log in if there is no email), optional email, role, branch, and optionally a password. If you leave the password empty a temporary password is shown once; copy it and send it to the person privately.
- **Branches** — add branches (for example a depot or a second clinic) and assign people to them.
- **Audit log** — administrators only; a list of access changes.

Only administrators can add or change people. Everyone else sees the page read-only, with the note "read-only (you are not an administrator)".

> **Watch out:** The role list on this page is the standard business role list (Director / Owner, Production Manager, Finance Manager, Sales Manager, Supervisor, Farmhand, Veterinary Officer and Driver). These roles were designed for farms. The vendor tabs described in this part are **not** switched on and off by those module permissions: apart from the Users & Permissions tab itself, every person who can sign in to your company account sees every vendor tab and can create, change and delete records in it. Add only people you trust with your invoices and client list.

> **Note:** The people you add here are *logins*. They are different from the *Team* list in Settings, which is a list of staff (vets, drivers, operators) shown on your profile and used to assign work. See the next section.

Settings

The Settings tab has three blocks, in this order.

1. Share with government & partners

This block appears first when your company is a business (farm-type) account. It has a switch and two boxes.

- **Share with government & partners** — when switched on, your organisation's counts are included in anonymous district and national dashboards used by the Ministry of Agriculture, extension services and development partners. Your name is never shown. You also receive district advisories.
- **Province** and **District** with a **Save** button — these place your company on district dashboards.
- **Household profile** — appears if you are the director; used by programmes that report by sex, age and household size.

Only a **director** can change the switch, the province and district, or the household profile. Others see them greyed out and the hint "Only a director can change this".

> **Note:** The **District** in this block belongs to your *company*. The **District** in the Business profile below belongs to your *marketplace profile*. They are two separate fields. Set both.

2. Business profile

This is the form that feeds your public profile. Fill it in fully.

Field	What to enter
Business name *	Required. Shown everywhere.
Marketplace category	The type of provider farmers will look for. The choices are: Agro Dealer / Input Supplier, Equipment Hire, Veterinary Services, Agro Processing, Transport & Logistics, Agricultural Finance, Crop / Livestock Insurance, Extension & Advisory Services, Cold Storage, Certification & Inspection, AgriFood Seller / Fresh Produce, Agricultural Services.
Tagline	One line customers see first.
Description	A short paragraph about what you do.
Phone / WhatsApp	How customers reach you. Add at least a phone.
Email / Website	Optional.
District / Town / Address	Where you are based.
Districts served (comma-separated)	For example "Chongwe, Kafue, Chilanga". Farmers searching those districts can find you.
Specialties (comma-separated)	For example "Poultry, dairy, maize seed". Used in search.
Service hours	For example "Mon-Fri 08:00-17:00".
Year established	A year.
Business registration no. / TPIN / tax id	Optional.
We travel to the farm	Tick if you go to the customer.
Emergency call-outs available	Tick if you take emergency calls.

Click **Save profile**. The message "Business profile saved." appears, and the top bar updates.

Good to know

- The form has no place for a logo, photos or map position. Those cannot be added from this screen.
- Separate several districts or specialties with commas.
- Changing the **Marketplace category** changes where farmers find you, so change it only if the current one is wrong.

3. Team (staff list)

What it is for. A list of the people who do the work: vet officers, drivers, operators, technicians. People on this list can be chosen in drop-down lists, such as the **Vet officer** on an appointment or **Assigned to** on a job. They do not get a login from this list.

Step by step

1. Click **+ Add person**.
2. Fill in the window **Add team member**:

Field	What to enter
Full name *	Required.
Role	Owner / Director, Branch Manager, Veterinary Officer, Agronomist, Sales Representative, Technician, Driver / Operator, or Other. A new person starts as Technician.
Phone / Email	Contact details.
Licence / registration no.	Their professional licence, for example a veterinary registration number.
Active	Tick while they work for you. Only active people appear in the "Assigned to" list on jobs and in the "Vet officer" list on new appointments.
Bio	A short description.

1. Click **Save**.

The table shows name, role, phone, licence, active tick, and **Edit** and **Remove** buttons. **Remove** asks you to confirm.

> **Tip:** Untick **Active** instead of removing a person who leaves. Their name stays on old records.

First week checklist (all vendors)

1. Open the workspace and let it finish setting up.
2. Go to **Settings**. Fill in the whole **Business profile**, especially phone, WhatsApp, district, districts served, description and service hours. Click **Save profile**.
3. Set the province and district in the **Share with government & partners** block, and decide about the switch.
4. In **Settings** add your staff under **Team** (vets, drivers, operators).
5. Open **Marketplace Listing** and add your services with prices.
6. Add your certificates under **Certifications & licences**.
7. Add your people as logins in **Users & Permissions** if others will use the app.
8. Do one trial invoice: create it, send it, mark it paid, check **Revenue**, then void or leave it, depending on your records. (A paid invoice is permanent, so use a small real job instead of a made-up one.)

Daily routine (all vendors)

1. Open **Overview** and read the reminders.
2. Handle new requests in your main tab (appointments, bookings or jobs).

3. Record work done and payments received as soon as they happen.
4. Open **Invoices** and chase anything **Overdue**.
5. At the end of the week, look at **Revenue** and **Clients** (the *Outstanding* column).

Chapter 2 — Vet Services

The Vet Services workspace is for vet practices, mobile vets and para-vets. Its tabs, in order, are:

Tab	What it does
Overview	Today's picture: upcoming appointments, follow-ups, clients, money received.
Appointments	Every booking and walk-in visit; where you record the clinical outcome.
Patient Records	One card per client and animal species, built from your appointments.
Prescriptions	A register of every medication you recorded.
Services Catalog	Your services and fees (called "Services & fees").
Clients, Invoices, Revenue, Marketplace Listing, Users & Permissions, Settings	The common tabs from Chapter 1.

Before you begin, finish the **First week checklist** in Chapter 1. In particular add your vet officers under **Settings > Team** with role **Veterinary Officer** and their licence number, so they can be chosen on appointments.

Overview (Vet)

What you will see

Card	Meaning
Upcoming appointments	Appointments dated today or later whose status is **Requested** or **Confirmed**. Under it: how many of the next appointments are today.
Follow-ups due (7 d)	Appointments (not cancelled) that have a follow-up date within the next 7 days. Follow-ups already past their date are counted too.
Clients	The number of clients on your Clients list.
Received (30 d)	Money received in the last 30 days, and how many invoices are unpaid.

Under the cards are the revenue chart and **Quick actions** (**New appointment**, **Patient records**, **Prescriptions**, **Invoices**), then **Next appointments**: up to eight appointments from today onward that are not completed, cancelled or no-show, with date and time, client, type, animals (for example "Cattle × 12"), vet officer and status. If there are none it says "Nothing scheduled. Farmers book you from the marketplace; walk-ins go in under Appointments."

Appointments

What it is for. The working diary of the practice. Every farmer booking from the marketplace and every walk-in or phone visit you enter lives here, from first request to payment.

Before you start. Add your vet officers in Settings. Decide your standard consultation fee, or list it in the Services Catalog.

Appointment statuses

Status	Meaning
Requested	A farmer asked for a visit through the marketplace, or you entered it as a request. Waiting for you to confirm.
Confirmed	You agreed the date.
In progress	The vet is with the animals now.
Completed	The visit is finished and the outcome is recorded.
No show	The farmer did not turn up.
Cancelled	The visit was cancelled.

The table. The **Appointments** card has a status filter (**All statuses** or one status) and a **+ Appointment** button. Columns:

Column	Meaning
Ref / date	Date and time (blue), the reference such as VA-2026-0007, and "via marketplace" or "walk-in".
Client	Name, then phone or the client's district.
Type & animals	The visit type and the species and number of animals.
Reason	The reason or symptoms; if you have recorded one, "Dx:" and your diagnosis in teal.
Officer	The vet officer, or a dash.
Fee	The total charge if set, otherwise the consultation fee. A green "paid" appears when paid.
Status	The status label.

The last column has buttons that depend on the status:

Button	Shown when	What it does
Confirm	Status is Requested	Sets the status to Confirmed.
Start	Requested or Confirmed	Sets the status to In progress.
Record outcome / **Edit record**	Any status except Cancelled and No show (**Edit record** once it is Completed)	Opens the clinical record window.
Invoice	Completed and not yet paid	Opens an invoice made from the appointment.
Cancel	Requested or Confirmed	Sets the status to Cancelled.

> **Note:** "via marketplace" is shown for any appointment linked to a platform account. That includes appointments you entered yourself after picking a platform client in the client picker. "walk-in" means a client typed in by name.

Types of visit

The **Type** choices are: General consultation, Vaccination, Treatment / procedure, Diagnosis / lab, Deworming, Pregnancy check, Pre-slaughter certification, Teleconsultation and Other.

The **Species** choices (when you book) are: Cattle, Goats, Sheep, Pigs, Broilers, Layers, Village chickens, Tilapia, Dogs and Other.

Step by step: receive and manage a farmer's booking

1. A farmer books you from the marketplace (see "How farmers find and book you" at the end of this chapter). The appointment appears in **Appointments** with status **Requested** and the words "via marketplace". It also counts in **Upcoming appointments** on the Overview.
2. Read the **Reason** column. The farmer may have written symptoms. Phone the farmer if you need more, using the phone number in the client column (or in their account).
3. Click **Confirm** once you agree the date.
4. If you want a particular officer on it, click **Record outcome** at any time and choose the **Vet officer** (you can do this before the visit and save with the status **Confirmed**).
5. On the day, click **Start** when you begin. The status becomes **In progress**.
6. When the visit is over, click **Record outcome** and fill in the clinical record (see below).
7. Click **Invoice** if you bill by invoice, or tick **Paid in full** in the outcome window if the farmer paid on the spot.

If the farmer does not come, open **Record outcome**, set **Status** to **No show** and save. To cancel before the visit use **Cancel**.

> **Note:** Once an appointment is Cancelled or No show there are no buttons left on it. Create a new appointment if the farmer wants another date.

Step by step: enter a walk-in or phone appointment

1. Click **+ Appointment**. The window **New appointment** opens.
2. Choose the client in the client picker: search for a platform client, or type a walk-in name and phone.
3. Fill in the form:

Field	What to enter
Type	The kind of visit (list above). Starts as General consultation.
Vet officer	Choose from your active staff, or leave **Unassigned**.
Date *	The visit date (required). Starts as today.
Time	The time. Starts at 09:00. Clear it for "no set time".
Species	Starts as Cattle.
Number of animals	The count, 0 or more.
Reason / symptoms	What is wrong or what the visit is for.
Consultation fee (ZMW)	The fee you will charge. It becomes the total if you do not enter a different total later.
Status	**Requested**, **Confirmed** or **In progress**. Starts as **Confirmed**.

1. Click **Book**. The message "Appointment booked." appears.

If something goes wrong: "Give a client organisation or a client name" means you did not choose a client or type a walk-in name. "Invalid appointment type" or "Vet officer not found" mean the form was out of date; close it and try again.

Step by step: record a consultation or treatment (the clinical record)

1. In **Appointments**, click **Record outcome** on the visit. The window is titled with the reference, the client and the species.
2. Fill in:

Field	What to enter
Status	**Confirmed**, **In progress**, **Completed**, **No show** or **Cancelled**. The window opens on **Completed**; change it if the visit is not finished.
Vet officer	Who did the work. All staff are listed here.
Species / Animals seen	Correct them if the numbers on the day were different.
Diagnosis	Your finding, for example "Newcastle disease (suspected)" or "Mastitis (subclinical)".
Treatment given	What you did.
Prescription / medications	See below.
Follow-up / next vaccination date	The date of the next visit or booster.
Total charge (ZMW)	The full amount for this visit. It starts from the consultation fee.
Notes	Advice to the farmer, biosecurity, withdrawal reminders.
Paid in full	Tick if the farmer has paid.

1. Click **Save record**. The message "Clinical record saved." appears.

Good to know

- You can open **Edit record** on a completed appointment as often as you like, to add or correct things.
- If you leave **Total charge** empty and the appointment has a consultation fee, the total is set to the fee.
- A follow-up date makes the visit appear in **Follow-ups due (7 d)** on the Overview when it is within seven days.

Writing a prescription

What it is for. To record every drug or vaccine given or prescribed, in the same window as the diagnosis. The app keeps these records as a register (the **Prescriptions** tab) which is the kind of record a VRAZ inspection asks for.

Step by step

1. In the outcome window, find **Prescription / medications**. The column titles are **Drug / vaccine**, **Dose**, **Route**, **Days** and **Withdrawal (d)**.
2. Click **+ Add medication** to add a row.
3. Fill in the row:

Field	What to enter
Drug / vaccine	For example "Oxytetracycline 20%". A row with no name is thrown away when you save.
Dose	For example "1 ml/10 kg".
Route	Choose from IM (injection into muscle), SC (under the skin), IV (into a vein), Oral, Topical (on the skin), In water, In feed.

Field	What to enter
Days	How many days the course lasts.
Withdrawal (d)	The number of days after the last dose before the animal's milk, eggs or meat may be sold or eaten.

1. Click the × to remove a row. Click **Save record** when done.

> **Watch out:** Always fill in **Withdrawal (d)** for drugs that have a withdrawal period. The farmer relies on it before selling meat, milk or eggs. The app does not calculate it for you and does not send reminders.

> **Note:** AGRINUXES records what you prescribed or gave. It does not keep a pharmacy stock for vets, so nothing is taken out of any inventory when you record a medication. If you sell medicines as products, use an Agro Dealer workspace or keep your own stock register.

Prescriptions (register)

What it is for. A read-only list of every medication recorded on any appointment. It cannot be edited here; correct an item by opening **Edit record** on its appointment.

What you will see. A card titled **Prescription register** with the number of lines, and a table:

Column	Meaning
Date	The appointment date.
Client	The farm or person.
Animals	Species and number.
Drug / vaccine	The medicine name.
Dose, Route, Days	As entered.
Withdrawal	The withdrawal days, for example "7 d".
Prescribed by	The vet officer on the appointment.

With nothing recorded it says "No prescriptions yet. Add medications when you record an appointment outcome." The list has no search box and no export button in this version.

Patient Records

What it is for. To see, per client and per kind of animal, how many animals you look after, how often you have visited, what conditions you found and what is owed. It is built by the app from your appointments; you do not add records here.

How records are grouped. One card is made for each **client + species** pair, for example "Mwamba Farm — Cattle". Cancelled appointments are left out. A platform client and a walk-in with the same name are different cards.

What you will see

Four cards at the top:

Card	Meaning
Herds / flocks on record	The number of cards.
Animals under care	The total of the animal counts on all cards.

Card	Meaning
Follow-ups scheduled	Cards that have a future follow-up date.
Outstanding fees	The total of unpaid visit charges.

Below is **Patient records** with a search box ("Search client, species, condition"). Each card shows:

- the client name, an icon for the species, the species and the phone number;
- the number of animals in large type ("head");
- the number of visits and the date of the last visit, with "follow-up [date]" in amber if one is coming;
- the diagnoses you have recorded, as small tags;
- the medications used, after a pill icon;
- "Owes ZMW …" in red if the client has unpaid completed charges.

With no data it says "Patient records build up automatically from appointments: one card per client and species."

Good to know

- The animal count on a card is the *largest* number you recorded on a single visit, not a running total.
- Owed amounts count appointments that have a total charge and are not ticked paid.
- There are no records of individual animals (tag numbers, names) in this version; the record is per herd, flock or group.
- You cannot click a card to open it. To change the details, open the appointment.

Services Catalog (Vet)

This tab is the **Services & fees** list described in Chapter 1 under "Services and prices". The hint on the screen says: "Consultations, vaccinations, farm visits, lab work — with pricing per head, per visit or per hour."

Suggested entries for a practice in Chongwe:

Name	Pricing model	Price	Unit label
Farm visit and consultation	Fixed price	350	per visit
Newcastle vaccination	Per head / animal	2	per bird
Cattle dipping advice	Per hour	150	per hour
Post-mortem	Fixed price	450	per case

> **Example:** These figures are only an illustration of how to fill the form. Use your own prices.

Invoicing a visit

1. Complete the clinical record and make sure **Total charge** is correct.
2. In **Appointments** click **Invoice** on the completed appointment. (The button is shown while the appointment is Completed and not ticked Paid.)
3. In the window "Invoice for VA-…", check the lines. The first line is the visit type, species, number of animals and date, priced at the total charge (or the consultation fee). Each medication is added as a line at price 0.

4. Add tax and a due date if needed and click **Save draft**.
5. Go to **Invoices**, click **Send**, and later **Mark paid** with the payment method. The appointment is then marked **Paid** automatically.

If the farmer pays at the clinic, you may skip the invoice and just tick **Paid in full** in the outcome window. Remember that the revenue figure needs a total charge on the appointment.

What the farmer sees when booking a vet

In the farm workspace, under the Markets section of the left menu, there is a **Vet Services** page. It shows a list of practices as cards: name, tagline, location, the districts served, a **Verified** badge (if the platform has verified you), the star rating and a few tags. The farmer can search by name or description, and filter by district.

When the farmer opens your card they see tabs **Overview** (description, coverage areas and tags), **Services**, **Reviews** and **Certifications**, with your phone, email, website and hours at the top. They click **Book / Enquire** and fill in:

Field the farmer sees	Notes
Service Type *	General Consultation, Vaccination, Treatment / Procedure, Diagnosis / Lab, Deworming, Pregnancy Check, Teleconsultation (Remote), Other. (Pre-slaughter certification is not offered here.)
Appointment Date *	A date. There is no time field.
Species / Animal Count	Free text and a number.
Symptoms / Reason	What is wrong. This arrives in your **Reason** column.
Additional Notes	Not stored on the appointment in this version, so do not rely on it.

After sending, the farmer sees "Request submitted!" and a reference number starting with VA-, and the message that your business will contact them on your phone number. **That is why your phone number must be filled in.**

> **Watch out:** In this version the farmer's view of a live practice shows your description, districts, tags, contact details, hours and rating. The **Services**, **Reviews** and **Certifications** tabs on the farmer's card may read "No services listed yet." or "No reviews yet." even when you have filled in your own lists. Because of this, put your main prices and services in your **Description** and **Tagline** too, and make sure your phone number is correct so farmers can call.

First week checklist (Vet)

1. Complete the common checklist in Chapter 1 (profile, phone, districts, hours).
2. Tick **We travel to the farm** if you do farm visits, and **Emergency call-outs available** if you do emergencies.
3. Add every vet officer and para-vet under **Settings > Team** with licence numbers.
4. Add 5 to 10 services with fees in **Services Catalog**.
5. Add your Veterinary Board registration and any other certificates under **Marketplace Listing**.
6. Enter three real appointments (**+ Appointment**) and record the outcome of each, including one medication with a withdrawal period.
7. Check **Patient Records** and **Prescriptions** to see them appear.
8. Invoice one completed visit and mark it paid. Look at **Revenue**.
9. Ask a friendly farmer to open **Vet Services** in the farm workspace and book you, so you see the "via marketplace" flow once.

Daily routine (Vet)

1. **Overview**: check **Upcoming appointments** and **Follow-ups due (7 d)**.
2. **Appointments**: filter **Requested**; **Confirm** or phone each one.
3. During the day: **Start** and **Record outcome** for each visit, with diagnosis, medications and total charge.
4. After the visit: **Invoice** or tick **Paid in full**.
5. Evening: look at **Invoices** for overdue items, and at **Patient Records** for clients that owe you.

How farmers find and book you (Vet)

1. **Fill in** (all in Settings and Marketplace Listing): business name, tagline, description, phone and WhatsApp, district, districts served, specialties (for example "Poultry, cattle, tilapia"), service hours, the travel and emergency boxes, services with prices, and certificates.
2. **Appear in search.** Farmers search on the Vet Services page by words in your name, tagline, description and specialties, and filter by district. Your profile is active from the first day. Verification by an administrator adds the Verified badge.
3. **When a booking arrives.** It appears under **Appointments** as **Requested** (via marketplace), and in your Overview counts. The app does not send you an email or text message about it, so check the app every day. Confirm it, phone the farmer, and continue as in "receive and manage a farmer's booking".
4. **Keep your rating high.** Reviews from farms appear in the Customer reviews card after moderation.

> **Note:** The page on the farmer's side also has a **Register your practice** button. Anything saved with that button is stored only on that farmer's device and is *not* your real marketplace profile. Use your own workspace, as described above.

> **Watch out:** Check how you appear. Open the farm workspace Vet Services page (or ask a friendly farmer to) after you save your profile, and make sure your practice is in the list. If your practice does not appear, tell AGRINUXES support.

Chapter 3 — Equipment Hire

The Equipment Hire workspace is for businesses that rent out tractors, ploughs, planters, sprayers, drones, trucks and other machines, with or without an operator. Its tabs are:

Tab	What it does
Overview	Machines available, open bookings, service due, money received, and bookings needing action.
Fleet Management	Your list of machines with rates.
Bookings	Enquiries, quotes and hire jobs from request to payment.
Maintenance	Service and repair log with due dates and costs.
Clients, Invoices, Revenue, Marketplace Listing, Users & Permissions, Settings	The common tabs from Chapter 1.

In **Marketplace Listing** the services card is titled **Other services**, with the hint: "Optional: land preparation packages, delivery, operator-only hire. Machines themselves are listed under Fleet."

Overview (Equipment Hire)

Card	Meaning
Machines	Available machines out of all machines, for example "3 / 5", with "available now".
Open bookings	Bookings in status Enquiry, Quoted, Confirmed or Active; under it, how many are new enquiries.
Service due (14 d)	Number of machines with a next-service date within 14 days (or already passed).
Received (30 d)	Money received in the last 30 days.

Quick actions: **Bookings**, **Fleet**, **Invoices**, **Maintenance**. Below, **Bookings needing action** lists up to eight open bookings (reference, client, machine, dates, status, amount). If empty: "No open bookings."

Fleet Management

What it is for. The catalogue of machines you hire out, with the rates you charge. Bookings can be tied to a machine, and the Overview counts how many machines are available.

Before you start. Know each machine's name, type and rates.

Step by step: add a machine

1. Click **+ Add machine**.
2. In the window **Add to fleet**, fill in:

Field	What to enter
Name *	Required. Something you will recognise, for example "John Deere 5075E (Blue)".
Type	Tractor, Plough / ridger, Planter, Combine harvester, Sprayer, Agricultural drone, Irrigation system, Truck / transport, Generator, Storage equipment, Processing equipment, Other. A new machine starts as Tractor.
Make / Model / Year	Brand, model and year of manufacture.
Capacity (HP, tonnes, m)	Free text, for example "75 HP" or "3.5 t".
Daily rate (ZMW)	The price per day.
Per-hectare / per-km rate (ZMW)	The price per hectare (or per km for vehicles).
Minimum hire days	The shortest hire you accept. Starts at 1.
Operator / driver included	Tick if the price includes an operator. Starts ticked.
Fuel included	Tick if fuel is in the price.
Available for hire	Tick when the machine can be booked. Starts ticked.
Notes	Anything else, for example conditions or the delivery charge.

1. Click **Save**.

What the table shows: machine name with make, model and year; type; capacity; daily rate; per-hectare rate; "operator / no operator · fuel incl. / fuel excl."; whether it is available (a tick, or "unavailable" in amber); **Edit** and **Delete** buttons.

Good to know

- Rates are in ZMW. Fill in whichever of daily and per-hectare rates applies; the booking form uses them to suggest a price (see below).

- To take a machine out of service for repairs, open **Edit** and untick **Available for hire**. Logging maintenance does *not* do this for you.
- You can only delete a machine that has no Confirmed or Active bookings.
- The fleet page says the entries are visible to farmers and can be booked. At present a farmer's booking form asks for dates, hectares, address and notes, not for a specific machine, so you will normally choose the machine yourself when you quote.

If something goes wrong: "Equipment has confirmed or active bookings — mark it unavailable instead" means you tried to delete a machine that is booked. Untick **Available for hire** instead.

Bookings

What it is for. To manage each hire from the first enquiry to the final payment, whether it came from a farmer on the marketplace or from a phone call.

Booking statuses

Status shown	Meaning
Enquiry	A request arrived, or you logged an enquiry. Nothing is agreed yet.
Quoted	You gave the client a price.
Confirmed	The client accepted. The machine is reserved for the dates.
Active	The machine is out with the client (in use, on site).
Completed	The hire is finished and the machine is back.
Cancelled	The hire will not happen.

A normal booking moves **Enquiry → Quoted → Confirmed → Active → Completed**. You can set any status from the **Update** window; the app does not force the order, except that a quote needs an amount.

The bookings table

The **Bookings** card has a status filter and a **+ Booking** button. Columns:

Column	Meaning
Ref	The reference such as HB-2026-0012, and "marketplace" or "walk-in".
Client	Name, then phone or district.
Equipment	The machine, or "unassigned" in amber.
Dates	Start → end.
Area	Hectares, if given.
Quote / agreed	The agreed amount, or "quote" and the quoted amount.
Paid	A tick if paid in full, "deposit" if only the deposit is paid.
Status	Status label.

The last column has **Quote** (on an Enquiry) or **Update** (on anything else), and **Invoice** (when Completed and not paid in full).

Step by step: handle a booking from a farmer

1. A farmer sends a hire request. It appears in **Bookings** as **Enquiry**, "marketplace", with the machine shown as **unassigned**, and it counts under **Open bookings** and in the Overview list **Bookings needing action**.

2. Click **Quote**. The window with the booking reference and client name opens. If the farmer wrote a note, you see "Customer note: …" at the top.
3. Choose the **Equipment** (the machine) and check **Start** and **End** dates.
4. Enter the **Quoted amount (ZMW)**. Set **Status** to **Quoted**.
5. In **Notes to customer** write what the price includes, for example "Includes operator, fuel extra, delivery ZMW 300".
6. Click **Save**. The message "[reference] updated." appears. Phone the farmer with the quote; the app does not send it.
7. When the farmer accepts, click **Update**, set **Agreed amount (ZMW)**, and change **Status** to **Confirmed**.
8. When the machine goes out, set **Status** to **Active**. Tick **Deposit paid** if you took a deposit.
9. When it is back, set **Status** to **Completed**. Tick **Paid in full** when the money is received, or use **Invoice**.

The Update window fields

Field	Meaning
Status	Enquiry, Quoted, Confirmed, Active, Completed, Cancelled.
Equipment	The machine, or **Unassigned**.
Start / End	The hire dates. End must not be before start.
Quoted amount (ZMW)	The price you offered.
Agreed amount (ZMW)	The price agreed. This is the amount revenue and invoices use.
Deposit paid	A tick box.
Paid in full	A tick box.
Notes to customer	Your notes.

Watch out: The deposit is only a tick box. The app does not record how much the deposit was. Write the amount in **Notes to customer** or in the invoice notes.

Watch out: The app does **not** check whether a machine is already booked on the same dates. Before you confirm, look at **Bookings** for the same machine and dates, to avoid double booking.

Watch out: **Paid in full** adds money to **Revenue** only if the booking also has an **Agreed amount**. Fill it in before you tick paid.

Step by step: log a phone or walk-in booking

1. Click **+ Booking**.
2. Choose the client with the client picker.
3. Fill in the **New booking** window:

Field	What to enter
Equipment	A machine, or **Choose later**. Machines that are not available show "(unavailable)".
Status	Enquiry, Quoted, Confirmed or Active. Starts as Confirmed.
Start * / End *	Dates. Both start as today.
Hectares	The area to be worked, if hired by area.

Field	What to enter
Agreed amount (ZMW)	The price. If you chose a machine, the label shows a suggestion, for example "suggested 4800".
Site / delivery address	Where the machine will work.
Notes	Your own note.

1. Click **Create booking**. "Booking created." appears.

How the suggested price is worked out. If you entered hectares and the machine has a per-hectare rate, the suggestion is hectares × the per-hectare rate. Otherwise, if the machine has a daily rate, it is the number of days (start to end, both days counted) × the daily rate. You can type a different amount.

> **Example:** A tractor with a daily rate of ZMW 1,200 is booked 3 to 5 October (3 days). Suggested amount: 3 × 1,200 = ZMW 3,600. With 8 ha and a per-hectare rate of ZMW 450, the suggestion would be 8 × 450 = ZMW 3,600.

If something goes wrong

Message	What it means
End date must be on or after the start date	Fix the dates.
Give a client organisation or a client name	Choose or type a client.
Equipment not found	The machine was deleted. Reopen the form.
Enter a quoted amount to send a quote	You set the status to Quoted with no quoted amount.

Invoicing a hire

1. When the booking is **Completed** and not paid in full, click **Invoice**.
2. The invoice has one line: "Hire of [machine] [start] → [end]", quantity 1, unit price the agreed amount (or the quoted amount if none is agreed). Add extra lines in the window (for example fuel or delivery) only if you want to replace that line. Save the draft.
3. In **Invoices** click **Send**, then **Mark paid**. The booking is marked paid in full.

Maintenance

What it is for. A log of servicing and repairs per machine, so you know when each is due, what it has cost and how long it was out of use.

What you will see

Card	Meaning
Service records	Number of log entries.
Due within 14 days	Entries whose "next due" date is within 14 days or already past.
Maintenance cost (all)	Total of costs logged.
Downtime days	Total days the machines were out of use.

Below, the **Maintenance log** has a **+ Log service** button (disabled until you have added a machine). Columns: Date, Machine, Type, Work done, Cost, Hours, Next due (red when due soon), By, and a **Delete** button. Empty: "No service records yet." or "Add machines to the fleet first."

Step by step: log a service

1. Click **+ Log service**.
2. In the window **Log maintenance** fill in:

Field	What to enter
Machine *	Choose the machine.
Type	Routine service, Repair, Inspection, Tyres / tracks, Other.
Date *	The date of the work.
Work done *	A short description, for example "Engine oil and filters".
Cost (ZMW)	The cost.
Hour-meter reading	The machine's hours at service.
Downtime (days)	Days the machine was out of use.
Next service due	The date of the next service. This feeds the "Service due" reminders.
Performed by	A mechanic or workshop name.
Notes	Anything else.

1. Click **Save**.

Good to know

- You can delete a log entry but not edit it. If you made an error, delete and re-enter.
- Costs here are for your information. They are not posted to any accounting or finance screen.
- The "service due" reminder uses the latest **Next service due** dates you have logged. If you never fill it in, no reminder appears.
- Logging maintenance does not change a machine's availability. Open Fleet and untick **Available for hire** while it is in the workshop.

First week checklist (Equipment Hire)

1. Finish the common checklist in Chapter 1.
2. Add every machine under **Fleet Management** with type, capacity, rates and whether the operator and fuel are included.
3. For each machine, log its last service in **Maintenance** with the **Next service due** date.
4. In **Marketplace Listing**, add any extra services (land preparation packages, delivery) under **Other services**.
5. Add your registration papers as certificates.
6. Enter your currently booked jobs with **+ Booking** so the diary is complete.
7. Make one test of the whole chain: Enquiry, Quote, Confirmed, Active, Completed, Invoice, Mark paid, then look at **Revenue**.

Daily routine (Equipment Hire)

1. **Overview**: new enquiries and machines due for service.
2. **Bookings**: filter **Enquiry**; **Quote** each one and phone the farmer.
3. Update statuses as machines go out and come back (**Update**).
4. Log any repair the same day in **Maintenance**.
5. **Invoices**: chase overdue ones. Tick paid on bookings paid in cash.

How farmers find and book you (Equipment Hire)

1. **Fill in** your Business profile (phone, district, districts served, service hours, "We travel to the farm"), your fleet with rates, and certificates.
2. **Appear in search.** In the farm workspace there is an **Equipment Hire** page under Markets. Farmers search by words in your name, tagline and description, and filter by district. Equipment hire providers are listed on this page from their marketplace profile.
3. **What the farmer does.** The farmer opens your card and clicks **Book / Enquire**, then fills in **Start Date**, **End Date**, **Hectares (optional)**, **Delivery / Site Address** and **Notes** (equipment type, soil conditions, special needs). They are shown a reference starting with HB- and told you will contact them on your phone.
4. **What you receive.** An **Enquiry** in **Bookings**, marked "marketplace", with no machine chosen. You are not sent an email or text, so check the app daily. Quote, agree, confirm, as described above.

> **Note:** The site address the farmer types is saved with the booking but is not shown on the Bookings screen. Ask the farmer for the location when you phone about the quote. The farmer's notes are shown as "Customer note" in the **Quote** or **Update** window.

Chapter 4 — Transport & Logistics

The Transport & Logistics workspace is for haulage companies, truck owners and delivery services. Its tabs are:

Tab	What it does
Overview	Vehicles available, open jobs, service due, money received.
Transport Jobs	Your runs, from request to payment.
Vehicles	Your trucks and other vehicles with rates.
Maintenance	Service and repair log (same as Chapter 3).
Clients, Invoices, Revenue, Marketplace Listing, Users & Permissions, Settings	The common tabs from Chapter 1.

In **Marketplace Listing** the services card is titled **Routes & rates**, with the hint: "Per-km, per-tonne or per-trip rates and standard routes buyers can book."

> **Note:** The transport workspace has no **Bookings** tab. Work is managed in **Transport Jobs**.

Overview (Transport)

Card	Meaning
Vehicles	Available vehicles out of all vehicles, "available now".

Card	Meaning
Open jobs	Jobs in status Requested, Quoted, Scheduled or In progress. The note says "transport runs in progress or scheduled".
Service due (14 d)	Vehicles with a next-service date within 14 days or already past.
Received (30 d)	Money received in the last 30 days.

Quick actions: **Jobs**, **Fleet**, **Invoices**, **Maintenance**.

Vehicles

This tab works exactly like **Fleet Management** in Chapter 3, with different words: the button is **+ Add vehicle**, the card is **Vehicles**, and a new vehicle starts as type **Truck / transport**. Use the same fields: Name, Type, Make, Model, Year, **Capacity (HP, tonnes, m)** (for example "5 t"), **Daily rate (ZMW)**, **Per-hectare / per-km rate (ZMW)** (put your per-km rate here), Minimum hire days, **Operator / driver included**, **Fuel included**, **Available for hire** and Notes.

Vehicles you list here appear in the **Vehicle** drop-down when you create a job.

Transport Jobs

What it is for. To record every haulage run: who it is for, where it goes, how far, how much it carries, which driver and vehicle, the price, and whether it was paid.

Job statuses

Status	Meaning
Requested	A customer asked for a run. No price yet.
Quoted	You gave a price.
Scheduled	The date is agreed.
In progress	The vehicle is on the road.
Completed	Delivered. The completion date is stored automatically.
Cancelled	Not going ahead.

The jobs screen

At the top, four cards: **Jobs** (all), **Scheduled**, **In progress** and **Unpaid completed** (the total agreed value of completed jobs not marked paid).

The **Transport jobs** card has a status filter and a **+ Job** button. Columns:

Column	Meaning
Ref / date	Scheduled date and time (or "TBC"), job reference and kind.
Job	The title, and the service name if one was picked.
Client	Name and phone.
Route	Pick-up, then "→ destination", then the distance in km.
Qty	Quantity and unit.
Assigned	Driver, and the vehicle below it.
Amount	Agreed amount, or "quote" and the quoted amount; "paid" in green when paid.
Status	Status label.

The last column offers, depending on status:

Button	Shown when
Edit	Always.
Quoted, **Scheduled**, **In progress**, **Completed**, **Cancelled**	The next steps allowed from the current status (see below).
Invoice	Completed and not paid.
Delete	Status Requested or Cancelled.

The status steps offered as one-click buttons are:

Current status	One-click buttons
Requested	Quoted, Scheduled, Cancelled
Quoted	Scheduled, Cancelled
Scheduled	In progress, Cancelled
In progress	Completed
Completed, Cancelled	none

In **Edit** you can set any status.

Step by step: create a transport job

1. Click **+ Job**. The window **New transport job** opens.
2. Choose the client with the client picker.
3. Fill in:

Field	What to enter
Kind	Service job, Installation, Consulting / advisory, Transport / haulage, Delivery, Other. For transport it starts as **Transport / haulage**.
Job title *	Required. For example "Maize to FRA depot".
Pick-up	Where the load is collected.
Drop-off / destination	Where it goes (shown for transport and delivery).
District	The district.
Distance (km)	The route length (shown for transport and delivery). It is not worked out by the app.
Quantity / Unit	The load and its unit. Unit starts as **tonnes**; you can write "trips" or "bags".
Date / Time	When the run is planned. Date starts as today.
Assigned to	A driver from your active staff (Settings > Team).
Vehicle	One of your vehicles.
Status	Starts as **Scheduled**.
Quoted (ZMW) / Agreed (ZMW)	The price you quoted and the price agreed.
Paid	Tick when the client has paid.
Description / scope	Details of the load, loading conditions, and so on.
Completion notes	Shown only when the status is Completed; for example "Delivered, signed by storekeeper".

1. Click **Save job**. "Job saved." appears.

Step by step: run a job through its life

1. A customer phones: create the job with status **Requested**, or **Quoted** if you give the price straight away.
2. Click **Quoted** (if not done), then **Scheduled** once the date is agreed.
3. Assign the driver and the vehicle in **Edit**.
4. On the day click **In progress**, then **Completed** when delivered, and add **Completion notes** in **Edit**.
5. Click **Invoice**, send it, and mark it paid. Or tick **Paid** in **Edit**, remembering that revenue counts only when **Agreed (ZMW)** is filled in.

Pricing, routes and rates. The app does not calculate a price from the distance. You type the **Quoted** and **Agreed** amounts. Keep your standard rates in **Routes & rates** (Marketplace Listing) so your team and farmers can see them. For a per-tonne rate use the pricing model **Per unit** with the unit label "tonne", or **Per km** for kilometre rates, or **Fixed price** with "per trip" in the unit label.

> **Example:** A 5-tonne truck takes maize from Chongwe to a depot in Lusaka. Title: "Maize 5 t to depot"; pick-up "Chongwe Cooperative store"; destination "Lusaka depot"; distance 55 km; quantity 5 tonnes; quoted and agreed ZMW 2,800.

Invoicing a job. In the invoice window the line is the job title, quantity (the load, or 1 if empty) and unit, with the unit price equal to the agreed amount (or quoted amount) divided by the quantity.

If something goes wrong: "Give a client organisation or a client name" (no client), "Invalid status" or "Service not found" (the form is out of date; reopen it).

Maintenance (Transport)

Identical to Chapter 3 "Maintenance". Log services, tyres and repairs on each vehicle with the hour or kilometre reading in **Hour-meter reading**, and set **Next service due**.

First week checklist (Transport)

1. Finish the common checklist in Chapter 1.
2. Add each truck under **Vehicles** with capacity, per-km rate and whether the driver and fuel are included.
3. Add your drivers under **Settings > Team** with role **Driver / Operator**.
4. In **Marketplace Listing > Routes & rates**, add your common routes and rates.
5. Log the last service of each vehicle in **Maintenance**.
6. Enter this week's runs under **Transport Jobs**.
7. Invoice your first completed run.

Daily routine (Transport)

1. **Overview**: open jobs and vehicles due for service.
2. **Transport Jobs**: update statuses as runs move; assign drivers and vehicles.
3. After each delivery: **Completed**, completion notes, invoice.
4. Evening: **Invoices** (overdue) and **Maintenance** for any repair.

How farmers find and book you (Transport)

1. **Fill in** the Business profile (phone and WhatsApp most of all), districts served, service hours, Routes & rates and certificates. Your marketplace category is **Transport & Logistics**.
2. **Appear in search.** Your profile is stored in the provider directory under Transport & Logistics, searchable by name, tagline, description and specialties, and by district. In the farm workspace there is no separate Transport page under Markets in this version; farmers mainly reach transporters by phone, through the AgriServices page, or through programmes.
3. **When a request arrives.** Most requests will come by phone or WhatsApp; enter each one under **Transport Jobs** with **+ Job**, status **Requested**, so it counts in **Open jobs** and builds your client list.

Chapter 5 — AgriServices Provider

The AgriServices workspace is for businesses that sell work rather than goods: land preparation, irrigation installation, fencing, soil and water testing, spraying, farm consulting, and similar. Its tabs are:

Tab	What it does
Overview	Open jobs, completed jobs, clients, money received, and upcoming jobs.
Services Catalog	Your services and rates (the "Services & rates" list).
Job Schedule	Your jobs from request to payment.
Clients, Invoices, Revenue, Marketplace Listing, Users & Permissions, Settings	The common tabs from Chapter 1.

Overview (AgriServices)

Card	Meaning
Open jobs	Jobs in status Requested, Quoted, Scheduled or In progress; under it, how many are new requests.
Completed (all time)	Number of completed jobs.
Clients	Number of clients.
Received (30 d)	Money received in the last 30 days.

Quick actions: **New job**, **Services & prices**, **Clients**, **Invoices**. **Upcoming jobs** lists up to eight open jobs in date order, with date (or "TBC"), job, client, site, assigned person and status. Empty: "Nothing scheduled."

Services Catalog

This is the **Services & rates** list from Chapter 1 ("Services and prices"). The hint says: "Land preparation, irrigation installation, fencing, soil and water testing, consulting — priced per ha, per hour or per job."

Use **Per hectare** for ploughing or spraying, **Per hour** for machinery or consulting time, **Fixed price** for a per-job price such as a drip kit installation, and **Negotiable / quote** where you quote each time. Give **Price max** if the price is a range.

> **Example:** "Ploughing and harrowing" — category Land preparation — Per hectare — price 450 — lead time 3 days. "Soil testing (basic)" — Fixed price — price 600 — unit label "per sample set". "Drip irrigation installation, 1 ha" — Fixed price — price 18,000 to 24,000.

The same list also appears in the **Marketplace Listing** tab under **Services & rates**.

Job Schedule

What it is for. To plan, assign and track each job for a client.

Job statuses are the same as in Chapter 4: Requested, Quoted, Scheduled, In progress, Completed and Cancelled.

Job kinds: Service job, Installation, Consulting / advisory, Transport / haulage, Delivery, Other.

The screen. Four cards: **Jobs**, **Scheduled**, **In progress** and **Unpaid completed**. The **Job schedule** card has a status filter and **+ Job**. Columns are the same as in Chapter 4, except the fifth is **Site** (location) rather than Route. The action buttons and the status steps are the same too (Requested → Quoted or Scheduled or Cancelled, and so on), plus **Edit**, **Invoice** (Completed, unpaid) and **Delete** (Requested or Cancelled).

Step by step: create and schedule a job

1. Click **+ Job**. The window **New job** opens.
2. Choose the client (platform client or walk-in).
3. Choose **Kind**. For most work leave it as **Service job**.
4. In **Service from catalogue** pick one of your catalogue services. This fills the **Job title** (if empty) and the **Quoted** amount (if empty) from the service's price. Change them if needed.
5. Enter **Job title**, **Site / location**, **District**.
6. Enter **Quantity** and **Unit**. The unit starts as **ha**; write "hours", "samples" or anything else you need.
7. Choose **Date** and **Time**.
8. In **Assigned to** choose the technician or operator (active staff only). In **Equipment** choose the machine if the job uses one of your machines (all machines on your Fleet list appear; note that the AgriServices workspace has no Fleet tab, so this list is only filled for businesses that also keep equipment).
9. Set **Status** (starts as **Scheduled**) and the **Quoted (ZMW)** and **Agreed (ZMW)** prices.
10. Add the **Description / scope**. Click **Save job**.

To move a job along click the status buttons in the last column. Use **Edit** to add **Completion notes** (shown when the status is Completed) and to tick **Paid**.

Assigning work. Staff in **Settings > Team** with **Active** ticked appear in **Assigned to**. The assignee's name is shown in the **Assigned** column and on the Overview.

Invoicing a job

When a job is Completed and unpaid, click **Invoice**. One line is created: the job title, quantity and unit, with the unit price equal to the agreed (or quoted) amount divided by the quantity. Add tax or notes, save the draft, then **Send** and **Mark paid** in the Invoices tab. The job is then marked paid.

> **Watch out:** As in other vendor types, a job that is only ticked **Paid** counts as revenue only if it has an **Agreed (ZMW)** amount.

First week checklist (AgriServices)

1. Finish the common checklist in Chapter 1.
2. List all your services with prices in **Services Catalog**.

3. Add your technicians under **Settings > Team**.
4. Add your trade papers (for example ZEMA or ZABS) as certificates.
5. Enter your confirmed jobs for the next two weeks in **Job Schedule**.
6. Invoice and collect payment for your first completed job.

Daily routine (AgriServices)

1. **Overview**: new requests and upcoming jobs.
2. **Job Schedule**: quote the requests, schedule them, and assign people.
3. As jobs finish: **Completed**, completion notes, **Invoice**.
4. **Invoices**: chase unpaid ones.

How farmers find and book you (AgriServices)

1. **Fill in** your Business profile (phone, WhatsApp, district, districts served, specialties such as "Irrigation, soil testing"), and your Services Catalog with prices. Your marketplace category is **Agricultural Services**.
2. **Appear in search.** Your profile is stored in the provider directory under Agricultural Services. In the farm workspace, the **AgriServices** page under Markets is a separate listings board where service offers are posted as listings with a price and a phone number; on that page the offers a visitor posts are kept on that visitor's own device. Farmers who need your service can also contact you directly, so a clear phone number and WhatsApp number matter most.
3. **When a request arrives.** In this version there is no booking button for AgriServices. A farmer phones or messages you. Enter the request under **Job Schedule** with **+ Job** and status **Requested**. This keeps your diary, clients and revenue complete.

Part 7 — Vendor Workspaces: Agro Dealers, AgriSupply, AgriFood Sellers and Processors

This part covers the four vendor workspaces that **sell goods or process produce**: **Agro Dealer**, **AgriSupply**, **AgriFood Seller** and **Agro Processor**. They share one engine. The first three (dealer, supply, food seller) are almost the same screens with different names. The processor adds a set of screens for raw material intake, processing lots and traceability.

Part 6 — Vendor Workspaces: Basics, Vet Services, Equipment Hire, Transport and AgriServices explains the things every vendor workspace has: how the workspace is created, the sidebar, **Clients**, **Invoices**, **Revenue**, **Marketplace Listing**, **Users & Permissions** and **Settings**. This part does not repeat them. Where they matter to a sale, this part tells you which tab to open and says "see Part 6".

How these workspaces work

What is saved and where

Everything in these four workspaces is saved to your company account. That means your whole team sees the same catalogue, orders, stock and lots, on any phone or computer, and nothing is lost if you clear your browser. You do not need **Backup & Restore** for these tabs.

The pieces that make up a goods workspace

Piece	What it is	Where you work with it
Listing (product)	One line in your catalogue, with a name, price, unit and stock quantity.	Catalogue, Stock and Pricing tabs
Order	A sale to a customer, with one or more lines, a total, a delivery choice and a paid flag.	Orders tab
Invoice	A bill you can print or send to a customer, optionally built from an order.	**Invoices** tab (Part 6)
Lot (processor only)	One batch of raw material from one source, followed through processing to finished product.	Processor tabs
Services	Extra things you offer (delivery, spraying, toll milling).	**Marketplace Listing** tab (Part 6)

The golden rule about stock

Your **stock** is the **Quantity in stock** on each listing. It changes in only three ways:

1. You change it yourself with **adjust** or **Edit**.
2. An order that contains that listing moves from **New** to **Confirmed** (or further). The quantities on the order lines are taken off the listing, one time only.
3. You create the listing, which sets the opening quantity.

The app never changes stock when an order is cancelled, deleted or delivered later. The details are explained under Orders below.

Terms used in this part

- **Listing**: a product you sell. When it is **Active** (shown as "live in marketplace") farmers and buyers can see it.
- **Walk-in order**: a sale to someone who came to your counter or phoned you. You type it in yourself.
- **Lot**: a processing batch with its own code, such as LOT-2026-0001.
- **Yield**: finished output divided by raw input, as a percentage.
- **Toll milling**: milling a farmer's own grain for a fee, without buying it.

> **Note:** The tab names change by business type. Agro Dealer has **Product Catalog**; AgriSupply has **Supply Catalog**; AgriFood Seller has **Produce Listings**. They open the same kind of screen.

Part A — Agro Dealer

Your sidebar shows: **Overview**, **Product Catalog**, **Orders**, **Stock Management**, then the common tabs from Part 6 (**Clients**, **Invoices**, **Revenue**, **Marketplace Listing**, **Users & Permissions** if you hold the team permission, **Settings**).

Overview (Agro Dealer)

What it is for. A one-screen summary of your shop: what you have listed, what orders are waiting, who your customers are and how much money you have received.

Before you start. Nothing. The workspace is created the first time you open it. Set your district and phone number under **Settings** (see Part 6) so customers can reach you.

Step by step.

1. Sign in and open your workspace. **Overview** is the first tab.
2. Read the four number tiles at the top.
3. Use the **Quick actions** buttons to jump to a tab.
4. Scroll to the **Open orders** table at the bottom.

What you will see.

Tile	Meaning
Active listings	Products currently live. The small text shows how many are **low on stock**.
Open orders	Orders still in progress (New, Confirmed, Packed, Out for delivery). The small text shows how many are **new**.
Customers	Different customers who have ordered (and, for processors, suppliers too).
Received (30 d)	Money actually received in the last 30 days.

Below the tiles are a **Revenue received (last 6 months)** chart with year-to-date and 30-day totals, and a **Quick actions** box with four buttons: **New order**, **Catalogue & prices**, **Stock** and **Invoices**. Under the buttons the app lists reminders such as unpaid invoices, listings low on stock, or "Add a phone number in Settings so customers can reach you".

The **Open orders** table shows the first eight open orders with these columns:

Column	Meaning
Ref	Order number, for example SO-2026-0001.
Customer	Who ordered.
Items	Each line as "name × quantity".
Total	Order total in ZMW.
Delivery	The delivery date, "to arrange" if no date was set, or "collect" if the customer collects.

A **Status** badge follows. If there are none you see "No open orders."

Good to know.

- "Low stock" always means a live listing with 10 units or fewer. It is a fixed number, not a setting you can change.
- Revenue only counts money received: orders marked **paid** and paid invoices. An order is never counted twice if you also invoiced it (see Revenue below).

Product Catalog (Agro Dealer)

What it is for. This is your list of products. Each product you add here is also your marketplace listing: it is what farmers and buyers see. It holds the price, the unit and the stock level.

Before you start. Know the product name, the unit you sell it in (for example bag), the price per unit in ZMW and how many you have.

Step by step: add a product.

1. Open **Product Catalog**.
2. Click **+ Add product** (top right of the catalogue card).
3. Type the **Name** (required). Include the pack size, for example "Compound D fertiliser 50 kg".
4. Optionally type a **Description**, such as brand, nutrient grade or crop use.
5. Enter **Quantity in stock** (required, zero or more).
6. Choose the **Unit** from the list.
7. Enter **Price per unit (ZMW)** (required).
8. Optionally set **Minimum order**, **Location / pick-up** and **Available until**.
9. Tick **Delivery available** if you can deliver.
10. Click **Save**. The button shows "Saving…" and then a green "Saved." message appears.

The product is **live immediately** after you save a new one. There is no separate publish button.

What you will see: the form fields.

Field	Required?	What to enter
Name	Yes	Product name and pack size.
Description	No	Short notes for buyers.
Quantity in stock	Yes	How many units you hold now. Zero or more.
Unit	No (starts as kg)	One of: kg, bag, litre, tonne, crate, tray, head, piece, box, bale.

Field	Required?	What to enter
Price per unit (ZMW)	Yes	Price for one unit. Zero or more.
Minimum order	No (starts at 0)	Smallest quantity a buyer should order.
Location / pick-up	No	Where customers collect, for example "Chongwe Main Road shop".
Available until	No	A date after which the offer ends.
Delivery available	No	Tick if you deliver.

There are no category choices, photo upload or barcode fields in this form. Put the category (seed, fertiliser, chemical, feed, tools) in the **Name** or **Description**, for example "Maize seed SC513 10 kg - hybrid seed".

What you will see: the catalogue table. At the top are four tiles: **Listings** (with how many are live in the marketplace), **Stock value (asking)** (live stock times price), **Low stock (≤ 10)** and **Marketplace views** (how many times your listings have been viewed). The table below has these columns:

Column	Meaning
Item	Name, with the description under it.
Stock	Quantity, with a small **adjust** link. It turns amber at 10 or fewer.
Unit and **Price**	Unit and price per unit.
Min order	Minimum order quantity.
Delivery	A tick if delivery is available, a dash if not.

After those columns come **Status** and an action column (**Edit**, **Unlist** or **List**, **Remove**).

Statuses of a listing.

Status	Meaning
Active	Live in the marketplace. New products start here.
Draft	Hidden from buyers. This is what **Unlist** sets.
Sold	Stock reached zero through an order. Hidden from buyers.
Expired	Hidden. Can be listed again with **List**.
Negotiating	A status the platform knows, but this tab has no button to set it.

Step by step: edit a product.

1. Find the product in the table and click **Edit**.
2. Change any field. The window title is "Edit" followed by the product name.
3. Click **Save**.

Step by step: hide a product from the marketplace.

1. Click **Unlist** on an active product. Its status becomes **Draft**.
2. To show it again click **List**. This appears for products in **Draft**, **Expired** or **Sold**.

Step by step: remove a product.

1. Click **Remove** (red).

2. Confirm the question "Delete [name]? This cannot be undone."
3. The product disappears from your catalogue. Behind the scenes it is marked cancelled, and past orders keep their text.

Good to know.

- Prices are always in ZMW.
- If you change a price, orders already recorded keep the price they were created with.
- **Delivery available** is only a promise shown to buyers. It does not create deliveries by itself.
- **Marketplace views** counts views of your listings by others.

If something goes wrong.

Message	What it means
"Listing not found"	The product was removed or belongs to another company. Reload the page.
"Quantity and price cannot be negative"	Enter zero or a positive number.
"Invalid status"	The status you chose is not allowed. Reload and try again.
"Not authenticated"	You were signed out. Sign in again.

Error messages appear in a coloured banner at the top of the page for a few seconds.

Orders (Agro Dealer)

What it is for. To record every sale and follow it from new to delivered and paid. Orders can be walk-in sales you type in yourself, or sales that come from the marketplace, a programme voucher scheme, or phone calls.

How orders arrive. Orders are entered in this tab by you or your staff. When a buyer finds your listing or profile and contacts you (phone, WhatsApp, or a visit), you record the order here, choosing the **Source** that matches. The Orders tab itself does not receive orders automatically from buyers. The **Source** field simply tells you where the sale came from.

Before you start. Add the products first (see Product Catalog), so you can pick them from a list and have prices and stock handled for you.

Step by step: create an order.

1. Open **Orders** and click **+ Order**. A window called **New order** opens.
2. Choose the customer. Type at least two letters into **Search platform client (farm / coop)…** and click the matching farm or cooperative. Or leave that empty and type the **walk-in name** (required in that case) and **Phone**.
3. In the first line, open **From catalogue** and pick a product. The **Item**, **Unit** and **Unit price** fill in by themselves, showing the stock in the list, for example "Compound D fertiliser 50 kg (100 bag)".
4. Type the **Qty**. You can still change the unit or unit price.
5. For another product click **+ Add line**. To drop a line click the **×** at the end of it.
6. For something not in your catalogue leave **From catalogue** on "— custom item —" and type the item, quantity, unit and price yourself. Stock is not touched for custom items.
7. Choose the **Source**: **Walk-in / phone**, **Marketplace** or **Programme voucher**.

8. Choose the **Status** (starts at **Confirmed**).
9. Enter a **Discount (ZMW)** if you give one.
10. Tick **Delivery required** if you are delivering. Two more boxes appear: **Delivery address** and **Delivery date**.
11. Add **Notes** if you wish.
12. Tick **Paid** if the customer has already paid.
13. Check the **Total** shown at the bottom (lines added up, minus discount).
14. Click **Record order**. You see "Order recorded."

What you will see: the order form.

Field	Meaning
Source	**Walk-in / phone**, **Marketplace** or **Programme voucher**.
Status	**New**, **Confirmed**, **Packed** or **Delivered** when you create the order.
Discount (ZMW)	Amount taken off the total. The total never goes below zero.
Delivery required	Shows address and date fields.
Paid	Tick if money is already received.
Notes	Free text.

What you will see: the orders table. At the top right are a status filter (**All statuses**, **New**, **Confirmed**, **Packed**, **Out For Delivery**, **Delivered**, **Cancelled**) and the **+ Order** button. The columns are:

Column	Meaning
Ref / date	Order number (SO-year-number), the date created and the source.
Customer	Name and phone.
Items	Each line as "name × quantity unit @ price".
Total	Total in ZMW, with the discount shown under it if any.
Fulfilment	The delivery address and date, or "Collection".

Then come **Paid**, **Status** and an action column. In **Paid** you see a tick if paid, otherwise a green **mark paid** link.

Status flow. The action column shows only the next steps that make sense:

Current status	Buttons you see
New	**Confirmed**, **Cancelled**, and also **Delete**
Confirmed	**Packed**, **Out For Delivery**, **Delivered**, **Cancelled**
Packed (Packed / Ready)	**Out For Delivery**, **Delivered**
Out For Delivery	**Delivered**
Delivered	None. If it is not paid, an **Invoice** button shows.
Cancelled	None.

Click a button to move the order. The app shows a message such as "SO-2026-0001 → Confirmed".

Effect on stock. This is the most important rule in the Orders tab.

- While an order is **New**, stock is **not** touched.

- The first time an order becomes **Confirmed**, **Packed**, **Out For Delivery** or **Delivered**, each line that was picked from the catalogue takes its quantity off that product's stock. This happens only once per order.
- If you create an order straight at **Confirmed** (the default), stock is taken off at once.
- If stock would go below zero it stops at zero. The app does not warn you or refuse the sale.
- If a product reaches zero, its status changes to **Sold** and it disappears from the marketplace until you add stock.
- **Cancelling** an order does **not** put stock back. Add it back yourself with **adjust**.
- Custom lines (typed without choosing a catalogue product) never change stock.

Payment.

- Click **mark paid** when the customer pays. There is no payment method field on the order itself.
- If you raise an **Invoice** from the order and mark the invoice paid on the **Invoices** tab, the order is marked paid too (see Part 6).
- Revenue counts a paid order once. If an invoice linked to the order is also paid, the invoice is counted and the order is not counted twice.
- An order's revenue date is its delivered date, otherwise its delivery date, otherwise the day it was created.

Invoice from an order.

1. When an order is **Delivered** and not yet paid, click **Invoice**.
2. A window opens saying "Invoice for [order number]". The customer and lines are taken from the order.
3. Add a **Tax / VAT amount**, a **Due date** and **Notes / payment details**, for example your mobile money number.
4. Click **Save draft**. Then use the **Invoices** tab to **Send** it and mark it paid (Part 6).

Delete an order. The **Delete** link shows only for **New** orders. Confirm "Delete [ref]? This cannot be undone." The app itself only allows deleting orders that are **New** or **Cancelled**. Delivered and confirmed orders stay on record.

Good to know.

- You cannot edit an order after saving it. To correct a mistake on a **New** order, delete it and enter it again. For a confirmed one, cancel it, restore stock with **adjust**, and enter a new order.
- Set the delivery date and address when you create the order. They cannot be changed later.
- Marking the order **Delivered** records the delivery time automatically.

If something goes wrong.

Message	What it means
"An order needs at least one item"	Every line had an empty item name. Fill in at least one item.
"Give a client organisation or a client name"	Choose a platform customer or type a walk-in name.
"Item quantity and unit price must be numbers"	A quantity or price is not a number.
"Item values cannot be negative"	Use zero or more.
"Client organisation not found"	The platform customer no longer exists. Use a walk-in name.
"Order not found"	The order was removed. Reload.

Message	What it means
"Only new or cancelled orders can be deleted"	You tried to delete a confirmed or delivered order. Cancel it instead.
"No orders yet. Record counter sales here; confirming an order deducts stock from the linked listings."	The empty list message.

Stock Management (Agro Dealer)

What it is for. To see how much you hold of each product and to correct it when stock arrives, gets damaged or is sold outside the app.

Step by step: add or remove stock.

1. Open **Stock Management**. The card is called **Stock on hand**.
2. Find the product and click the small **adjust** link next to its stock number.
3. A window called "Adjust stock" followed by the product name opens. It shows the current quantity.
4. Type a number. Use a positive number for stock received (for example 50) and a negative one for shrinkage or off-platform sales (for example -3).
5. Check the **New level** shown under the box.
6. Click **Apply**. You see "Stock updated."

The **Apply** button stays disabled until you type something.

What you will see. The screen is the same table as **Product Catalog** (same tiles, same columns, **+ Add product**, **Edit**, **Unlist/List**, **Remove**). Only the card title changes. Use **Stock Management** for counting and receiving, and **Product Catalog** for prices and descriptions.

Low stock and reorder.

- Anything at 10 units or fewer shows in amber and is counted in **Low stock (≤ 10)**, in the Overview tile, and in the reminder "listing(s) low on stock".
- There is no automatic reorder, supplier or purchase list in this workspace. Use the low stock number as your cue to buy more, then add the delivery with **adjust**.
- Stock cannot go below zero. If you type a negative number larger than what you hold, the new level shows as 0.
- If a product was **Sold** (zero) and you add stock, it is switched back to **Active** automatically.
- If you adjust a product down to zero, it stays **Active** with a quantity of 0. Click **Unlist** if you do not want it shown.

If something goes wrong. Errors appear as a banner, for example "Quantity and price cannot be negative" or "Listing not found". Reload and try again.

How buyers find and order from you (Agro Dealer)

1. Your **Marketplace Listing** tab (Part 6) holds your public profile: name, description, contact numbers, district and the services you offer. Fill it in completely. Without a phone number buyers cannot reach you.
2. Your **Active** products are published to the marketplace listings, with price, unit, minimum order, location and delivery option.
3. Buyers can view your listings. The **Marketplace views** tile counts these views.

4. A buyer contacts you, or comes to the shop. You create the order in **Orders** (choose **Marketplace** as the source for sales that began on the platform).
5. Walk-in customers are recorded in the same way with **Walk-in / phone**.
6. Customers who are farm or cooperative accounts on the platform can be linked by searching for them, so they appear properly in **Clients** (Part 6).

First week checklist (Agro Dealer)

1. Open the workspace and check **Overview** loads.
2. Go to **Settings** and fill in district and phone (Part 6).
3. Fill in **Marketplace Listing** (Part 6).
4. Add your top 10 products in **Product Catalog** with correct stock and price.
5. Add your delivery and advisory services on the **Marketplace Listing** tab (the hint says: Delivery, spraying, soil testing or agronomy advice you offer alongside products).
6. Record one test sale on **Orders** to practise the steps, then cancel it and restore stock.
7. Invite staff under **Users & Permissions** (Part 6).
8. Create one invoice from a delivered order.

Daily routine (Agro Dealer)

- Morning: open **Overview**; check **Open orders** and the low stock reminder.
- During the day: record each sale in **Orders** the moment it happens, and move orders along as they are packed and delivered.
- When goods arrive from your suppliers: **Stock Management**, **adjust**, positive number.
- End of day: mark paid orders with **mark paid**, issue invoices for credit customers.
- Weekly: review **Revenue** and update prices in **Product Catalog**.

> **Example:** Mwansa runs an agro-dealer shop in Chongwe and sells 20 bags of Compound D to Mrs Phiri, who collects them and pays cash. 1. Product Catalog has "Compound D fertiliser 50 kg", unit bag, price 850, stock 100. 2. Orders, **+ Order**. Walk-in name "Mrs Phiri", phone 0966 111 222. 3. From catalogue: pick Compound D. Qty 20. Unit price 850 fills in. Subtotal 17,000. 4. Discount 500 for a loyal customer. Total shows ZMW 16,500. 5. Source **Walk-in / phone**, Status **Confirmed**, tick **Paid**. **Record order**. 6. Stock falls from 100 to 80 straight away. **Received (30 d)** rises by 16,500. 7. When she collects, click **Delivered** on the order.

Part B — AgriSupply Provider

AgriSupply is for businesses that sell farm supplies in volume: packaging, crates, irrigation kit, farm chemicals and storage. The workspace is the dealer's, plus a **Deliveries** tab. Your sidebar shows: **Overview**, **Supply Catalog**, **Purchase Orders**, **Stock Management**, **Deliveries**, and the common tabs from Part 6. The services heading on the **Marketplace Listing** tab is "Services offered".

Overview (AgriSupply)

It works exactly like the Agro Dealer **Overview** above: the tiles **Active listings**, **Open orders**, **Customers** and **Received (30 d)**, the revenue chart, **Quick actions** (**New order**, **Catalogue & prices**, **Stock**, **Invoices**), and the **Open orders** table.

Supply Catalog

Same screen and rules as the Agro Dealer **Product Catalog**. The button reads **+ Add supply item**, the window is titled "Add supply item", and the hint on the card says: "Packaging, crates, irrigation kit, farm chemicals, storage. Buyers browse these in the marketplace." The empty message is "No supply items yet. Add your first one to appear in the marketplace."

Use these tips for supplies:

- Put sizes in the name: "Plastic crate 40 L", "Drip line 16 mm 1000 m roll".
- Pick the right unit from the list: **crate**, **piece**, **box**, **bale**, **litre**, **tonne**.
- Use **Minimum order** for bulk-only items, for example 10 crates.
- Use **Available until** for a promotion that ends on a date.

Purchase Orders

This is the same **Orders** screen as the Agro Dealer, with the tab renamed. Here "purchase order" means an order a customer places **with you** for your supplies. It is not an order you place with your own suppliers.

Everything explained under Agro Dealer **Orders** applies: creating an order, the **Source** choices, the status buttons, the effect on stock, **mark paid**, **Invoice**, and **Delete**. Order numbers still start with SO.

Stock Management (AgriSupply)

Same as the Agro Dealer **Stock Management**: **Stock on hand**, **adjust**, **New level**, **Apply**, and the low stock limit of 10 units.

Deliveries

What it is for. To see only the orders that need delivering, so your drivers or dispatcher can work through them.

Before you start. Orders appear here only if **Delivery required** was ticked when the order was created. Remember to give the **Delivery address** and **Delivery date** at that time. You cannot edit them afterwards.

Step by step.

1. Open **Deliveries**. The card is titled **Deliveries**.
2. Use the status filter if you want only one stage, for example **Packed**.
3. Read the **Deliver to** column for the address and date. It shows "address n/a" if none was typed and "date to arrange" if no date was set.
4. As the order progresses click **Packed**, then **Out For Delivery**, then **Delivered**.
5. After delivery click **mark paid** (if the customer paid on delivery) or **Invoice** (if they pay later).
6. To add an order that is delivered, click **+ Order** and tick **Delivery required**.

What you will see. The same table as **Purchase Orders**, with the column **Fulfilment** renamed **Deliver to**. Cancelled orders are hidden. Orders that do not need delivery are hidden.

Good to know.

- The delivery status flow is the same as order status: **Confirmed** (or **Packed**) → **Out For Delivery** → **Delivered**.
- There is no driver, vehicle, route or proof-of-delivery field. Use **Notes** on the order for the driver's name and vehicle, and keep a signed delivery note on paper or in a photo outside the app.
- When you click **Delivered**, the app records the time. This is your delivery record.
- If you use a transport partner, see the **Transport & Logistics** workspace in Part 6.

If something goes wrong. The empty list says "No deliveries scheduled." If you expected an order, check that **Delivery required** was ticked, and that the order is not **Cancelled**.

How buyers find and order from you (AgriSupply)

Buyers browse your supply items in the marketplace and contact you from your profile. You record the order in **Purchase Orders** with the **Marketplace** source, then deliver it through **Deliveries**.

First week checklist (AgriSupply)

1. Complete **Settings** and **Marketplace Listing** (Part 6).
2. Add your supply items with correct units and stock in **Supply Catalog**.
3. Set **Minimum order** for bulk items.
4. Record a test purchase order with delivery and walk it through to **Delivered**.
5. Add your delivery service in **Marketplace Listing** services.
6. Add dispatchers and sales staff in **Users & Permissions** (Part 6).

Daily routine (AgriSupply)

- Open **Deliveries** first. Move orders to **Out For Delivery** as vehicles leave.
- Mark **Delivered** when you get the signed note back.
- Receive new stock with **adjust** in **Stock Management**.
- Invoice credit customers from delivered orders.

> **Example:** A packaging supplier in Lusaka sells 200 crates to a vegetable cooperative. Order from the catalogue, qty 200, unit crate, delivery required, address "Chongwe Coop Shed", date next Tuesday, Status **Confirmed**. Stock drops by 200. On Tuesday, **Out For Delivery**, then **Delivered**. Click **Invoice**, add the mobile money details in **Notes / payment details**, and **Save draft**.

Part C — AgriFood Seller

AgriFood Sellers sell fresh produce, grain, eggs, dairy and processed food. Listings are shown to buyers, processors and exporters. Your sidebar shows: **Overview**, **Produce Listings**, **Buyer Orders**, **Pricing & Stock**, and the common tabs from Part 6. The services heading on the **Marketplace Listing** tab is "Services offered", with the hint "Delivery, grading, packaging or aggregation services."

Overview (AgriFood Seller)

Same tiles and table as the Agro Dealer **Overview**: **Active listings**, **Open orders**, **Customers**, **Received (30 d)**, the revenue chart, **Quick actions** and the **Open orders** table.

> **Note:** On an AgriFood Seller workspace, the **Catalogue & prices** and **Stock** quick-action buttons may not take you anywhere, because they point to tab names that are called **Produce Listings** and **Pricing & Stock** here. If a quick action does nothing, use the sidebar instead. **New order** and **Invoices** work normally.

Produce Listings

What it is for. Your list of produce lines. Each line is a marketplace listing, for example "Tomatoes, grade A, 20 kg crate" or "Table eggs, tray of 30".

Step by step: add a produce line.

1. Open **Produce Listings**.
2. Click **+ Add produce line**. The window is called "Add produce line".
3. Fill in **Name**, **Quantity in stock**, **Unit** and **Price per unit (ZMW)**. These four are the essentials.
4. Optionally add **Description**, **Minimum order**, **Location / pick-up** and **Available until**.
5. Tick **Delivery available** if you deliver.
6. Click **Save**.

The form is the same one used by all goods sellers; see the field table under Agro Dealer, Product Catalog. For produce, these fields are used as follows.

Field	How to use it for produce
Name	Produce, variety and pack: "Irish potatoes, 50 kg bag".
Description	Quality grade and condition: "Grade A, washed, no bruising".
Quantity in stock	How much you have ready to sell now.
Unit	kg, bag, crate, tray, head (for livestock), tonne, bale, piece, box or litre.
Minimum order	Smallest quantity per buyer, for example 5 bags.
Location / pick-up	Farm gate, depot or market stall.
Available until	The last date the produce is fresh or on offer.

> **Watch out:** This form has **no separate fields** for quality grade or harvest date. Write the grade and harvest date in the **Description**, for example "Grade A. Harvested 14-10-2026." Use **Available until** for the date after which you will no longer sell it.

Everything else is the same as the Agro Dealer **Product Catalog**: the four tiles, the status badges, **Edit**, **Unlist**, **List** and **Remove**, and the same error messages. The hint on the card reads: "Fresh produce, grain, eggs, dairy, processed food. Listings appear to buyers, processors and exporters." The empty message is "No produce lines yet. Add your first one to appear in the marketplace."

Good to know.

- Fresh produce goes off. Unlist (**Unlist**) a line as soon as the batch is gone and add a new line, or use **Available until**.
- A line that sells out through orders switches to **Sold** and is hidden. When you add stock with **adjust**, it becomes **Active** again.

Buyer Orders

This is the standard **Orders** screen, described in full under Agro Dealer, Orders. Buyers here are often traders, hotels, schools, processors and exporters. You can search for a buyer who has a platform account, or type a walk-in name and phone.

Key points for produce sellers:

- Use the **Discount (ZMW)** for bulk deals.
- Tick **Delivery required** and give the address and date when you will deliver. The dates cannot be edited later.
- Produce sold by weight can be entered with fractions, for example 12.5 kg.
- Orders move through **New**, **Confirmed**, **Packed**, **Out For Delivery**, **Delivered** and **Cancelled**, and deduct catalogue stock when confirmed.
- There is no **Deliveries** tab in this workspace. Filter **Buyer Orders** by status instead, and check the **Fulfilment** column for the address and date.

Pricing & Stock

What it is for. A place to update prices and quantities quickly each day as the market moves.

Step by step: update a price.

1. Open **Pricing & Stock**. The card is called **Prices & offers**.
2. Click **Edit** on the line.
3. Change **Price per unit (ZMW)**.
4. Click **Save**.

Step by step: update the quantity.

1. Click **adjust** next to the quantity.
2. Enter a positive number to add stock or a negative number to take stock away (for example after wastage).
3. Click **Apply**.

The screen is the same table as **Produce Listings**. There is no separate price history and no special offer type; to run a special offer, lower the price or set **Minimum order** and **Available until**, then edit the price back when it ends.

Good to know.

- The **Stock value (asking)** tile adds up quantity times price for live lines. It is a useful figure to compare before and after a price change.
- Low stock is 10 units or fewer.

How buyers find and order from you (AgriFood Seller)

1. Complete **Marketplace Listing** (Part 6) so buyers see who you are and where you are.

2. Keep produce lines **Active** with up-to-date price and stock.
3. Buyers contact you. Record the order in **Buyer Orders** with the **Marketplace** source.
4. Deliver, mark **Delivered**, mark **paid**, and invoice where needed.

First week checklist (AgriFood Seller)

1. Fill in **Settings** and **Marketplace Listing** (Part 6).
2. Add your main produce lines with grade and harvest date in the description.
3. Set **Minimum order** and **Delivery available** for each.
4. Record one test order, confirm it, check stock reduced, then cancel and adjust stock back.
5. Add your delivery, grading, packaging or aggregation services in **Marketplace Listing**.

Daily routine (AgriFood Seller)

- Morning: check market prices, then update **Pricing & Stock**.
- Add the day's harvest with **adjust**.
- Record orders as they come in.
- Evening: unlist anything that has gone, mark paid orders, check **Overview** for money received.

> **Example:** A grower in Kafue lists "Tomatoes, grade A, 20 kg crate" at ZMW 180, 60 crates in stock, minimum order 5, delivery available. A Lusaka restaurant orders 10 crates. You record a **Walk-in / phone** order with delivery to the restaurant on Thursday, status **Confirmed**. Stock drops to 50. On Thursday you click **Out For Delivery**, then **Delivered**, then **mark paid** after they pay.

Part D — Agro Processor

An agro processor turns raw produce (maize into mealie meal, soya into oil and cake, milk into yoghurt) into finished goods. The workspace tracks the **lot**: each batch of raw material from one source, how it was processed, what came out, and who bought it. Your sidebar shows: **Overview**, **Farm Sourcing**, **Processing Logs**, **Inventory**, **Traceability**, **Orders**, and the common tabs from Part 6. The services heading on the **Marketplace Listing** tab is "Processing services", with the hint "Toll milling, drying, packaging or cold storage you offer to farmers."

The lot, in plain words

A lot is one record that follows a batch from the day it arrives to the day it is sold. It carries:

- a **lot code** made by the app, in the form LOT-year-number (for example LOT-2026-0001);
- the **source** (a farm on the platform, or an outside supplier you name);
- the **raw material** with quantity, unit and price paid;
- the **dates**: received, processing started (set by the app), completed (set by the app);
- the **output**: finished product, quantity, unit, sold so far, expiry date;
- the **quality check**: pass, fail or not tested, plus notes;
- a **status**.

Lot statuses.

Status	Meaning
Received	Raw material has arrived and is waiting. Shown as "Raw material received".
Processing	Work has started. The start date is filled in for you.
Completed	Finished product is ready. The completed date is filled in for you if empty.
Sold Out	All of the finished product has been sold.
Rejected	The raw material failed quality control or was refused.

Overview (Processor)

What it is for. To see lots in progress, finished stock and money received.

What you will see.

Tile	Meaning
Lots in process	Lots that are **Received** or **Processing**. The small text shows total lots.
Finished stock	Units not yet sold across all **Completed** lots (output minus sold).
Open orders	Orders still in progress. The small text shows total orders.
Received (30 d)	Money actually received in the last 30 days.

The **Quick actions** buttons are **Record intake** (opens **Farm Sourcing**), **Processing**, **Inventory** and **Orders**. The **Recent lots** table lists the latest eight lots with these columns: **Lot**, **Source**, **Input**, **Product**, **Yield** and **Status**. If there are none you see "No lots yet. Record raw-material intake under Farm Sourcing."

The revenue chart and reminders are the same as for the other goods sellers.

Farm Sourcing

What it is for. To record raw material arriving at your gate, who supplied it, how much you paid and where it came from. This is the start of traceability.

Before you start. Know the supplier (a farm or cooperative on AGRINUXES, or a name for an outside supplier), the commodity, the quantity and unit, and the total price paid.

Step by step: record an intake.

1. Open **Farm Sourcing**.
2. Click **+ Record intake**. A window called **Record raw-material intake** opens.
3. To pick a farm on the platform, type at least two letters in **Source farm (platform)** and click the matching farm or cooperative. The **Source district** fills in for you.
4. For an outside supplier leave that empty and type the **or supplier name (off-platform)**. This box is switched off while a platform farm is chosen.
5. Check or type the **Source district**.
6. Set **Received on** (required; today by default).
7. Type the **Raw material** (required), for example "Maize grain".
8. Enter **Quantity** (required) and choose the **Unit** (kg, tonne, litre, bag, crate, head).
9. Enter **Price paid to source (ZMW)**, the total for the whole load, not per kilogram.
10. Leave **Status** at **Received**.
11. Optionally add **QC result**, **QC notes** and **Notes**.

12. Click **Save lot**. You see "Lot saved." and a lot code is created.

What you will see: the intake form.

Field	Required?	Meaning
Source farm (platform)	No	Search a farm or cooperative on AGRINUXES.
or supplier name (off-platform)	No	A supplier who is not on the platform.
Source district	No	Where the raw material came from.
Received on	Yes	Date of delivery.
Raw material	Yes	Commodity name.
Quantity and **Unit**	Yes	Amount received. Must be above zero.
Price paid to source (ZMW)	No	Total paid to the supplier.
Status	No	**Received** to start.

The window also has an **Output (fill when processing completes)** section; see Processing Logs below. If you give neither a platform farm nor a supplier name, the source shows as a dash and is grouped under "Unknown" in the suppliers table.

What you will see: the screen.

- Four tiles: **Raw material received** (all input quantities added together, whatever the unit), **Suppliers**, **In process** and **Paid to farmers** (total price paid).
- A **Suppliers** card with **Supplier**, **District**, **Lots**, **Quantity supplied**, **Paid** and **Last delivery**. This shows how much each supplier has delivered, biggest first.
- A lot table titled **Farm sourcing — raw material intake** with a search box ("Search lot, supplier, product"). Search matches the lot code, supplier, product and raw material.

The lot table has these columns:

Column	Meaning
Lot	The lot code, with the expiry date under it if set.
Received	Date received.
Source	Supplier and district.
Input	Quantity, unit and raw material.
Product / output	Finished product, quantity and unit, or a dash.

Then **Yield**, **Remaining**, **QC** (pass in green, fail in red, dash if untested), **Status** and the action links.

Good to know.

- The supplier you pick from the platform is also added to your **Clients** tab as a **supplier** (Part 6), so you can see all your sourcing partners in one place.
- The unit totals mix kilograms, tonnes and bags, so treat the **Raw material received** tile as a rough guide unless you always use the same unit.
- **Paid to farmers** is only what you typed. This screen does not pay the supplier; it only records what you paid. Pay through your usual channel.

If something goes wrong.

Message	What it means
"Input quantity must be positive"	Enter a quantity above zero.
"Source organisation not found"	The platform farm you chose no longer exists. Use the off-platform name.
"Invalid status"	Reload and pick a status from the list.
"Batch not found"	The lot was deleted. Reload.

Processing Logs

What it is for. To follow each lot while it is being worked on, and to record what came out.

Step by step: start processing.

1. Open **Processing Logs**. It lists only lots that are **Received** or **Processing**. The card is called **Processing — lots in progress**.
2. Find the lot and click **Start** (amber). The status becomes **Processing** and the start date is filled in. The **Start** link shows only for **Received** lots.

Step by step: finish a lot and record the output.

1. Click **Update** on the lot.
2. In the **Output** section type the **Finished product** (for example "Breakfast mealie meal 25 kg").
3. Enter the **Output quantity** and its **Unit**.
4. Optionally fill **Expiry / best before**, **QC result** (**Not tested**, **Pass** or **Fail**) and **QC notes** (for example "Moisture 12.5 %, aflatoxin < 10 ppb").
5. Set **Status** to **Completed**. The completed date is filled in for you.
6. Click **Save lot**.

The lot now leaves **Processing Logs** and appears in **Inventory**.

If the raw material fails, set **Status** to **Rejected** and write the reason in **QC notes**.

What you will see: the output fields.

Field	Meaning
Finished product	Name and pack of what you made.
Output quantity and **Unit**	How much came out, and in what unit (bags, kg, litres).
Quantity sold	How much of the output is sold so far. Starts at 0.
Expiry / best before	Shelf life date, shown under the lot code.
QC result	**Not tested**, **Pass** or **Fail**.
QC notes	Test readings and remarks.
Notes	Anything else.

Yield and loss.

- The app shows **Yield** as output divided by input times 100, rounded to one decimal place. It simply divides the two numbers and does not convert units.

- There is no separate loss field. Loss is what is left when you subtract: input minus output, in the same unit.
- So for useful yield figures, record the output in the **same unit** as the input. If you receive 5,000 kg of maize and record the output as 160 bags, the screen shows 3.2%, which is not a real yield. If you record 4,000 kg of meal, it shows 80%.
- If you want to count bags as well, put the bag count in the **Finished product** name ("Breakfast mealie meal, 25 kg bags") and use kg for quantity.

Good to know.

- **Delete** (red) removes a lot completely, after you confirm "Delete [lot code]? This cannot be undone." There is no restore.
- Everything on a lot can be edited again later with **Edit**.
- Lots do not take anything out of your farm Inventory or Finance. This workspace is separate from the farm workspace (Part 4). Costs and stock here live only on the lots and listings.

Inventory

What it is for. Your finished goods. It combines two lists, one above the other.

Part 1: finished-goods lots. The first card, **Finished-goods inventory**, shows **Completed** lots that still have some product left to sell (output greater than quantity sold). The **Remaining** column shows output minus quantity sold. The **+ Record intake** button is hidden here. The empty message is "No finished stock. Complete a lot with an output quantity to see it here."

To record sales against a lot:

1. Click **Edit** on the lot.
2. Raise **Quantity sold** by the amount sold.
3. Click **Save lot**. **Remaining** and the **Finished stock** tile on the Overview drop.
4. When everything is sold, set **Status** to **Sold Out**.

> **Watch out:** Orders you record do **not** change **Quantity sold** on a lot. Update the lot yourself, or your **Remaining** and **Finished stock** numbers will be too high.

Part 2: product catalogue. Below the lots is the same catalogue screen the dealers use, for the finished goods you offer for sale. The hint reads: "Finished goods offered for sale (mealie meal, oil, feed, packaged produce). Stock here is what buyers can order; lots under Processing track where it came from." The button is **+ Add finished product**, the window is titled "Add finished product", and the card is called "Catalogue" with a count. All the dealer rules apply: **Name**, **Quantity in stock**, **Unit**, **Price per unit (ZMW)**, **Minimum order**, **Location / pick-up**, **Available until**, **Delivery available**, **Edit**, **Unlist**, **List**, **Remove** and **adjust**. See Agro Dealer, Product Catalog.

The two lists are separate:

- The **catalogue** quantity is what buyers can order and what orders reduce.
- The **lot** quantity is your production record and traceability.

When a lot is completed, add the finished goods to the catalogue by creating or adjusting a product with the new quantity. The app does not do this for you.

Traceability

What it is for. To prove where a product came from. A recall, a buyer's question, or a quality audit can be answered by finding the lot.

How batch codes link the chain. Each lot has one code. It links farm to lot to product like this:

1. **Farm**: the supplier or farm named under **Source**, with district, date received, the quantity and the price paid.
2. **Lot**: the code (LOT-year-number), the raw material, the processing dates, the QC result and notes.
3. **Product**: the **Finished product** name, output quantity, expiry date and how much has been sold.

Print or write the lot code on the packaging of the finished product. If a customer reports a problem, search the code to see the source farm and the quality test.

Step by step: look up a lot.

1. Open **Traceability**.
2. Type in the search box ("Search lot, supplier, product") a lot code, farm name, product name or raw material. The list narrows as you type.
3. Read the row: the lot code (and expiry), received date, source and district, input, product and output, yield, remaining, QC result and status.
4. Click **Edit** to open the full lot with all the fields and QC notes.

What you will see. The card is called **Traceability — lot lookup**. It shows every lot you have, in every status, in the same table as above. The line above the table says: "Every lot code links finished product back to the farm it came from, the day it was received, QC result and expiry. Print the lot code on packaging." You can also use **+ Record intake** here.

Good to know.

- Traceability is only as good as the data. Always record the source and the QC result.
- The lot code is made by the app and cannot be changed.
- Buyers cannot look up a lot code on a public page. The lookup is inside your workspace only. Give the buyer the details from the lot when they ask.

Orders (Processor)

The **Orders** tab is the standard orders screen (see Agro Dealer, Orders). Buyers are wholesalers, shops, schools and farmers. Lines can be picked from your finished-product catalogue (found under **Inventory**) so that stock is deducted when the order is confirmed.

Remember that orders reduce the catalogue only, not the lots (see Inventory above).

Processing services (toll milling and similar)

Toll milling, drying, packaging and cold storage are services you offer to farmers who bring their own produce. They are set up on the **Marketplace Listing** tab in the block titled **Processing services**. Click **+ Add** and fill in the form.

Field	Meaning
Name (required)	For example "Toll milling - maize".
Category	For example Milling or Drying.
Pricing model	Fixed price, Per unit, Per hectare, Per head / animal, Per hour, Per day, Per km, Negotiable / quote, or Free.
Price and **Price max (range)**	Price, or a range from price to price max.
Unit label (e.g. 50 kg bag)	What the price is for, for example "per 50 kg bag".
Lead time (days)	How long the job takes to start. Blank means "Immediate".
Available	Untick to pause the service.
Description	Details.

These services appear on your public profile. They are not orders: the workspace has no special tab for toll milling jobs. To record a toll milling job, enter it as an **Orders** entry with a **custom item** (for example "Toll milling - maize, 20 bags"), or raise an invoice on the **Invoices** tab. Custom items never change stock.

You can also record a toll milling intake in **Farm Sourcing** if you want a lot code and traceability: enter the farmer as the source, put the raw material, and leave **Price paid to source (ZMW)** empty because you did not buy it. Add "Toll milling for the farmer, not purchased" in **Notes**.

How buyers find and order from you (Processor)

1. Your profile in the marketplace shows your processing services and contact details (**Marketplace Listing**, Part 6).
2. Your finished products (in the **Inventory** catalogue) are public marketplace listings with price, unit, minimum order and delivery option.
3. Farmers who want toll milling see your **Processing services** and contact you.
4. Buyers of finished goods contact you; you record their order in **Orders** (source **Marketplace** or **Walk-in / phone**).
5. Farmers who supply you appear as suppliers in **Farm Sourcing** and in **Clients**.

First week checklist (Processor)

1. Complete **Settings** and **Marketplace Listing** (Part 6), including your processing services.
2. Add your finished products in **Inventory** with price and opening stock.
3. Record every delivery of raw material in **Farm Sourcing**, with source, quantity and price.
4. Move each lot through **Start** and **Update** until **Completed**, with output and QC.
5. Check **Traceability**: search a lot code and confirm the source is shown.
6. Record your first sale in **Orders**, then update **Quantity sold** on the lot.

Daily routine (Processor)

- Record each arrival of raw material before it is tipped into the store.
- In **Processing Logs**, click **Start** when work begins. Update the lot when the run ends.
- Add the finished goods to the catalogue stock with **adjust**.
- Record orders. After sales, update **Quantity sold** on the lot.

- Weekly: review **Suppliers** for who delivered most, and **Paid to farmers**.

> **Example:** Milling 5 tonnes of maize in Chongwe. 1. **Farm Sourcing**, **+ Record intake**. Source farm: "Green Acres" (picked from the search). Raw material "Maize grain", Quantity 5000, Unit kg, Price paid ZMW 17,500, Received on today. **Save lot**. Lot LOT-2026-0001 appears with status **Received**. 2. On the day of milling open **Processing Logs** and click **Start**. Status is now **Processing**. 3. After milling click **Update**. Finished product "Breakfast mealie meal, 25 kg bags". Output quantity 4000, unit kg. Expiry date six months ahead. QC result **Pass**, QC notes "Moisture 12.5 %". Status **Completed**. **Save lot**. 4. The lot shows Yield 80%, Remaining 4000 kg, and appears in **Inventory**. Loss is 1,000 kg (the bran and dust). 5. In the **Inventory** catalogue click **+ Add finished product**: "Breakfast mealie meal 25 kg", unit bag, Quantity 160, price 250. It is live in the marketplace. 6. A shop orders 40 bags. In **Orders**, pick the product, Qty 40. Stock falls to 120. 7. Edit the lot: **Quantity sold** 1000 (40 bags × 25 kg). **Remaining** becomes 3000 kg. 8. A buyer asks for the source: search "LOT-2026-0001" in **Traceability** and read the farm, district, date and QC result.

Comparing the four workspaces

Which tab for which job

Job	Agro Dealer	AgriSupply	AgriFood Seller	Agro Processor
List what you sell	**Product Catalog**	**Supply Catalog**	**Produce Listings**	**Inventory** (lower catalogue)
Record a sale	**Orders**	**Purchase Orders**	**Buyer Orders**	**Orders**
Change stock	**Stock Management**	**Stock Management**	**Pricing & Stock**	**Inventory**, **adjust**
Change price	**Product Catalog**, **Edit**	**Supply Catalog**, **Edit**	**Pricing & Stock**, **Edit**	**Inventory**, **Edit**
Delivery list	**Orders** (filter)	**Deliveries**	**Buyer Orders** (filter)	**Orders** (filter)
Raw material in	Not available	Not available	Not available	**Farm Sourcing**
Production run	Not available	Not available	Not available	**Processing Logs**
Prove origin	Not available	Not available	Not available	**Traceability**
Optional services	**Marketplace Listing**	**Marketplace Listing**	**Marketplace Listing**	**Marketplace Listing**

The services block on **Marketplace Listing** is headed "Services offered" for dealers, AgriSupply and AgriFood Sellers, and "Processing services" for processors.

What is the same in all four

- The statuses of an order and the stock rule.
- The listing form and statuses (**Active**, **Draft**, **Sold**, **Expired**).
- The low stock limit of 10.
- Invoices, Clients, Revenue, Settings and Users & Permissions (Part 6).
- Everything is saved to the company account and shared by the team.

Where the money shows

An order counts as revenue only when it is marked **paid** (or when its invoice is paid). Paid invoices, paid orders and the other vendor payments all feed the **Revenue** tab and the **Received (30 d)** tile. See Part 6.

Part 8 — Buyers, Government, Extension Officers and Programme Partners

This part is for people who use AGRINUXES but do not run a farm workspace or a vendor workspace of their own. It covers four kinds of account:

- **Individual (customer) accounts** for buyers who want to browse the marketplace.
- **Government accounts** for ministries, district offices and national planners.
- **Extension officers and supervisors** who advise farms in a district or camp.
- **Programme partners** (donors, NGOs, FAO-style projects) who run programmes, enrol farms, deliver support and report results.

It also explains, from the farmer's side, what happens to a farm that agrees to share data, is enrolled in a programme or is assigned an extension officer. The last chapters help you choose the right account type and show what each account can and cannot see.

> **Note:** Part 1 — Getting Started and Your Account explains how to register and sign in. This part repeats only the registration fields that are specific to these account types.

Chapter 1: The Individual (Customer) Account

What this account is for

An **Individual** account is for a buyer, a farmer who only wants to look around, or anyone who wants to find vets, equipment hire, input dealers, produce sellers and farm services without managing a farm. An individual account has no business workspace: no production cycles, no finance, no stock. It has a small dashboard with four pages: **Home**, **Marketplace**, **Saved** and **Profile**.

> **Watch out:** In the current version, the individual dashboard is a browsing and contact tool. You can search, filter, view details, mark favourites and phone the seller. The **Order** and **Enquire** buttons on the individual dashboard are not yet connected to a request form. There is no screen for tracking requests, cancelling them or leaving reviews on an individual account. This chapter says exactly what is there and what is not, so you are not left guessing. Section "Booking and ordering from a business account" later in this chapter describes the booking forms that do exist (they are inside the farm workspace).

> **Note:** The individual screens and the public marketplace page show the product name **AgroNexus** in their top bar. This is the same platform as AGRINUXES.

Browsing before you sign in

You do not need an account to look at the marketplace. When you open the AGRINUXES address without signing in, you see the public marketplace page.

What you will see

- A top bar with **Sign in** and **Register free** buttons.
- A banner that says **Browse free — no account needed**, with two buttons: **Register as Individual** and **Register Farm / Business**.
- Four small tiles: the number of listings, **Verified sellers**, **AI farm tools** (for business accounts) and **Instant booking** (once registered).

- A search box with the hint **Search providers, products, categories…** and a count such as "27 listings · phone calls always free".
- Category buttons: **All**, **Vet Services**, **Equipment Hire**, **Agro Dealers**, **AgriFood**, **AgriSupply**, **AgriServices**. Each shows how many listings it holds.
- Listing cards in a grid. If nothing matches, you see **No results for "…"** and a **Clear filters** link.

What is on a card

Item	Meaning
Photo and category label	The kind of listing, for example Vet Services.
Verified badge	The platform has checked this seller. Not every listing has it.
Name and one-line description	The business or product.
Price in ZMW	Products show a price per unit (for example ZMW 175 per bag). Providers show a "From" price such as "ZMW 850/hr".
Location	The town or district.
Stars and number	The average rating and how many ratings.
View details	Opens the details window.

The details window shows the photo, category, name, description, price or "Starting from" price, location, a **Verified** mark, the rating, tags (for example "VBZ Registered", "Mobile", "24/7") and three buttons:

- **Call directly**: dials the listed phone number on a phone. Calls are always free of platform charges.
- **Video call**: shown only for listings tagged for video or teleconsultation. It asks you to sign in.
- **Order** (for products) or **Book / Enquire** (for providers): asks you to sign in. A yellow note says: "Sign in (or register free) to book, order, and start video calls — takes under 2 minutes."

> **Note:** The listings on the public page and on the individual dashboard are a built-in sample catalogue that shows how the marketplace looks (for example "AgriVet Zambia", "ZamTractor Hire Co", "Pioneer 30Y87 Maize Seed"). They are examples, not live stock. Live provider profiles and live listings are managed by the vendors themselves (see Part 6 — Vendor Workspaces: Basics, Vet Services, Equipment Hire, Transport and AgriServices and Part 7 — Vendor Workspaces: Agro Dealers, AgriSupply, AgriFood Sellers and Processors).

Creating an individual account

What it is for. Gives you a personal login so you can save favourites and use the dashboard.

Before you start. Have your name, an email address, a phone number and a password of at least six characters.

Step by step

1. On the public marketplace page, press **Register free** (or **Register as Individual**).
2. In the window that opens, choose the **Individual** tab.
3. Fill in the form (table below).
4. Tick the box "I agree to the Terms of Service and Privacy Policy".
5. Press **Create Account**. You go straight to your dashboard.

The fields

Field	Required	Notes
Full name	Yes	Shown on your dashboard and profile.
Email address	Yes	Used to sign in.
Phone number (for example +260 977 000 111)	Yes	The form refuses to continue without it.
Country (optional)	No	Zambia, Zimbabwe, Malawi, Tanzania, Mozambique, Botswana, Kenya, Uganda, Other.
Password (min 6 characters)	Yes	Click the eye icon to show or hide what you type.
Confirm password	Yes	Must match.
Terms checkbox	Yes	The **Create Account** button stays greyed out until it is ticked.

If something goes wrong

Message	What it means
Please agree to the Terms of Service to continue.	The terms box is not ticked.
Passwords do not match.	The two passwords differ.
Password must be at least 6 characters.	Choose a longer password.
Please enter a phone number.	The phone field is empty.
A user with this email already exists. / A user with this phone number already exists.	That email or phone is already registered. Sign in instead.

> **Tip:** On the same window, the link **Register a farm or business instead** switches to the business form, and **Sign in** returns to the sign-in tab. If you later decide to run a farm, register a separate Business / Farm account (see Part 1 — Getting Started and Your Account). The Profile page reminds you of this.

Signing in

Open the **Sign In** tab, type your **Email address** and **Password** and press **Sign In**. Wrong details give the message "Invalid phone/email or password." A disabled account gives "Account is disabled."

The individual dashboard

After sign-in, a top bar shows the logo, four page buttons (**Home**, **Marketplace**, **Saved**, **Profile**), a green chip with your first name and a **Sign out** button. On a phone the page buttons sit behind a menu button.

Home

What it is for. A welcome page and shortcut to the marketplace.

What you will see

Part	What it shows
Green welcome card	"Welcome back," your full name and your email, with two buttons: **Browse Marketplace** and **Saved (n)**, where n is how many favourites you have marked in this visit.
Tile **Saved**	Number of favourites in this visit.
Tile **Browsed**	The total number of listings in the catalogue (not a history of what you opened).
Tile **Calls**	Always shows 0. Calls happen on your phone and are not counted.
Featured providers	The first four verified providers. **View all** opens the Marketplace page.

Marketplace

What it is for. Searching and filtering the catalogue.

Step by step

1. Open **Marketplace**.
2. Type in the search box (hint: "Search providers, products..."). The list narrows as you type. The search looks at the name, the category and the one-line description. It does not search the location, tags or long description.
3. Press a category button to narrow by type. The buttons are **All**, **Vet Services**, **Equipment Hire**, **Agro Dealers**, **AgriFood**, **AgriSupply** and **AgriServices**. Search and category work together.
4. Read the count under the buttons, for example "6 listings".
5. On a card, press the heart to save it, **Call** to phone, or **Details** to open the details window.

What is on a card. Category label, heart, name, one-line description, price per unit (products only), location with a **Verified** mark, stars with rating and number of ratings, and the **Call** and **Details** buttons.

The details window adds the full description, "From" price for providers, tags, the seller name for products, and these buttons:

- **Call directly**: phone the seller.
- **Video**: shown only for listings that offer video (for example "TeleFarm Vet").
- **Order** (products) or **Enquire** (providers): see the watch-out at the start of this chapter. These buttons are shown but do not yet open a request form.

Good to know

- Press the grey background or the X to close the window.
- Prices are shown in ZMW.

Saved

What it is for. Your shortlist of favourites.

Step by step

1. Press the heart on any card. It turns red.
2. Open **Saved** to see only the cards you marked. Press the red heart again to remove one.
3. With nothing saved you see "Nothing saved yet" and a **Browse marketplace** link.

> **Watch out:** Favourites are kept only while the page stays open. If you refresh the page, close the browser or sign out, the list is empty again. If you need to remember a supplier, write down the phone number.

Profile

What it is for. Shows who you are signed in as.

What you will see

Item	Value
Picture	A letter badge with the first letter of your name.
Name and label	Your name and "Individual customer".
Email	Your sign-in email.
Phone	Your phone number, or a dash if none.
Account type	"Individual / Customer".
Amber box **Want to manage a farm?**	Tells you to sign out and register a Business / Farm account to get production tracking, payroll and AI analytics.
Sign out	Signs you out and returns to the public page.

> **Note:** The Profile page is read-only. There are no fields to edit your name, phone or password on the individual dashboard.

Booking and ordering from a business account

Because the individual dashboard has no request forms, buyers who need to book or order inside the platform do it from a **Business / Farm** account. Inside the farm workspace, the sidebar has a **Marketplaces** group with six pages: **AgriFood Market**, **AgriSupply**, **AgriServices**, **Agro Dealers**, **Equipment Hire** and **Vet Services**. (Whether you see them depends on your role; see Part 1 — Getting Started and Your Account.)

Listing boards: AgriFood Market, AgriSupply and AgriServices

What they are for. Classified-style boards where farms post produce, inputs and services for sale, and others browse.

Step by step (as a buyer)

1. Open the board from the sidebar.
2. On the left, use the **Browse** tab, the search box (**Search listings…**) and the category drop-down (**All Categories**).
3. Press a listing. The right side shows title, price per unit, whether the price is negotiable, quantity available, description, seller name and phone, location and posting date.
4. Press **Call Seller**. This board does not take orders inside the app; you agree the sale by phone.

Categories

Board	Categories
AgriFood Market	Poultry, Livestock, Fish & Seafood, Vegetables, Fruits, Grains & Cereals, Dairy, Eggs, Processed Foods, Other
AgriSupply	Seeds, Animal Feed, Fertiliser, Chemicals & Pesticides, Medicines & Vaccines, Day-Old Chicks, Fingerlings, Equipment, Irrigation, Storage, Packaging, Other Inputs
AgriServices	Veterinary, Agronomy, Transport, Equipment Hire, Aerial Services, Storage, Irrigation Services, Finance & Accounting, Training, Labour, Other Services

Posting your own listing uses the buttons **Sell Food**, **Sell Inputs** or **Offer Service**; see Part 7 — Vendor Workspaces: Agro Dealers, AgriSupply, AgriFood Sellers and Processors for selling.

> **Watch out:** On these three boards, the listings you post yourself and the sample listings are kept in this browser only. Saved on this device only; they are not shared with other users and are not backed up automatically. Use **Backup & Restore** (see Part 1 — Getting Started and Your Account) if you want a copy.

Provider directories: Equipment Hire, Vet Services and Agro Dealers

What they are for. Directories of service businesses with a profile, services list, reviews and certifications, and a booking or enquiry form.

Finding a provider

1. Open **Equipment Hire**, **Vet Services** or **Agro Dealers**.
2. Stay on the **Browse All** tab. (The **My Listings** tab shows businesses you registered yourself.)
3. Use the search box (**Search providers...**), the **All Districts** drop-down and the **All Categories** drop-down.
4. Press a card to open the profile.

Categories

Directory	Categories
Equipment Hire	Land Prep, Planting, Spraying, Harvesting, Irrigation, Transport, Conservation, Mapping
Vet Services	Consultation, Vaccination, Diagnostics, Laboratory, Surgery, Biosecurity, Teleconsultation, Nutrition, Breeding, Water Quality
Agro Dealers	Seeds, Fertiliser, Chemicals, Animal Feed, Equipment, Day-Old Chicks, Solar & Irrigation, Subsidised Inputs

The provider card shows the name, tagline, location and up to two districts, **Verified** and **Certified** badges, the star rating, up to three tags, the first two services with prices (shown as K for kwacha) and **View Profile**.

The profile window has four inner tabs:

Tab	What it shows
Overview	Description, coverage areas (districts), tags, and extras such as specialist crops.
Services (n)	Each service with description, price (or POA when no price is set), unit, category and whether it is Available.
Reviews (n)	Average rating and each review with reviewer name, stars, comment, service used and how long ago.
Certifications	Body, type, number and expiry.

A contact strip shows the location, phone, email, website, operating hours and licence number. The footer has **Call**, **Email**, **Website**, **Book / Enquire** and, for vets, agronomists and any verified provider, a video call button.

> **Note:** If the live provider service cannot be reached, a yellow banner says "Showing sample data — connect to AgroNexus backend to see live provider profiles". A blue banner says "Loading provider directory…" while it loads.

Booking equipment (Equipment Hire)

1. Open a provider and press **Book / Enquire**. The window is titled **Book Equipment**.
2. Fill in the form.
3. Press **Submit Request**.

Field	Required	Notes
Start Date	Yes	Defaults to today.
End Date	Yes	Defaults to today.

Field	Required	Notes
Hectares (optional)	No	For example 5.0, when hire is priced per hectare.
Delivery / Site Address	No	Farm location or GPS coordinates.
Notes	No	Equipment type, soil conditions, special needs.

Booking a vet (Vet Services)

1. Open a vet and press **Book / Enquire**. The window is titled **Book Vet Service**.
2. Fill in the form and press **Submit Request**.

Field	Required	Notes
Service Type	Yes	General Consultation, Vaccination, Treatment / Procedure, Diagnosis / Lab, Deworming, Pregnancy Check, Teleconsultation (Remote), Other.
Appointment Date	Yes	Defaults to today.
Species	No	For example Broilers, Tilapia.
Animal Count	No	For example 500.
Symptoms / Reason	No	What the visit is for.
Additional Notes	No	Anything else.

Sending an enquiry (Agro Dealers)

1. Open a dealer and press **Book / Enquire**. The window is titled **Send Enquiry**.
2. Type your message ("Describe what you need, quantities, location, timing…").
3. Press **Submit Request**.

What you will see after submitting. A green tick and "Request submitted!". If the platform returns a reference, it is shown ("HB-…" for a hire booking, "VA-…" for a vet appointment) with the line "{provider} will contact you on {phone}." If the platform cannot confirm straight away, you see a softer message such as "Enquiry saved — provider will contact you shortly." or "Appointment request saved — provider will confirm."

Statuses. A new hire booking starts as an **enquiry** and a new vet appointment starts as **requested**. The provider then confirms, completes or declines it in their own workspace (see Part 6 — Vendor Workspaces: Basics, Vet Services, Equipment Hire, Transport and AgriServices).

Good to know

- Booking forms are not available on your own listings (the **Book / Enquire** button is hidden for "My Business").
- The video call button starts a live consultation room with the provider.
- The Agro Dealers enquiry is sent to the dealer as a general consultation request with your message as the note.
- There is no screen in the directories where a buyer lists past requests, cancels one or posts a review. Reviews already approved appear on the **Reviews** tab. To change or cancel a booking, call the provider.

Chapter 2: Government Accounts

What this account is for

A **government** account is for ministries, provincial offices and district agricultural coordinators (DACO offices). It gives you de-identified, summed-up numbers about the farms in your area, a national map, an ecosystem view of all businesses, and a way to send advisories to farmers.

The most important rule is **consent and de-identification**:

- Only farms and cooperatives that have turned on **Share with government & partners** in their settings are counted in the production, market, disease and climate dashboards.
- Even then, you only see totals and counts. No farm name, owner, member, record or field is ever shown on the government dashboards.

Who can register and which roles exist

On the public page, press **Register free**, open the **Gov / Partner** tab and pick the role card:

Role card	Meaning
Dashboard viewer (Aggregated district & national data)	Government viewer role.
Extension officer (Caseload of farms in your camp / district)	See Chapter 3.
Supporting partner (FAO, donor, NGO) (Run programmes: enrol farms, deliver inputs & training, track results)	See Chapter 4.

The **Gov / Partner** form fields:

Field	Required	Notes
Your full name	Yes	
Official email address	Yes	
Phone number	Yes	
Organisation	Yes	For example "Ministry of Agriculture — Chongwe DACO".
Organisation type drop-down	Yes	**Government ministry / district office**, **NGO / development partner**, or **Donor programme**. Choosing the supporting partner card changes "government" to "donor" for you.
Province and **District**	Optional (required for an extension officer)	Where the organisation works.
Password (min 6 characters) and **Confirm password**	Yes	
Terms checkbox	Yes	

Press **Create partner account**.

> **Note:** The person who creates the organisation becomes its **administrator** (shown by a shield icon in the team list). An administrator has full access to every page of that organisation, whatever role card they picked. The administrator can then add colleagues with narrower roles (see "Team & Branches" below).

Government roles

Role	What it is for	What it can do
Administrator (gov_admin)	Manages the team, branches and advisories; sees everything.	Full access: all dashboards, registry, advisories (view, create, edit, delete), caseloads, visits, programmes, enrolment, support, M&E, notices, team and settings.
Dashboard viewer (gov_viewer)	Read-only district and national dashboards.	View only: the dashboards (including Ecosystem and National Map), District Registry and Programmes. Cannot issue advisories, cannot add or edit programmes, cannot manage the team.
Extension supervisor	Oversees officers in the branch and issues advisories.	See Chapter 3.
Extension officer	Caseload of farms, visits, direct advice.	See Chapter 3.

Only the administrator can change someone's role, branch or per-page permissions (see "Team & Branches").

The government screen

The left sidebar shows only the pages your permissions allow. A button with three lines collapses the sidebar to icons. The sidebar footer says "Read-only aggregates. Farms appear only after opting in; individual farms are never identified." and has **Sign Out**.

Page	Needs	What it is
National Overview	Dashboards	Headline numbers, weekly trend, enterprise mix and top hotspots.
Ecosystem	Dashboards	All business types, service gaps and programme coverage.
National Map	Dashboards	Map of districts with layers.
Production	Dashboards	Harvest by week and enterprise categories.
Markets & Prices	Dashboards	Commodity prices and marketplace supply.
Disease & Alerts	Dashboards	Diagnoses by severity, farmer reports and hotspots.
Climate & Sustainability	Dashboards	Emissions, offsets, water, certifications.
District Registry	Registry	One row per district.
Advisories	Advisories	Send and review advisories.
Programmes	Programmes	The same programme tools as Chapter 4, for your organisation's own programmes.
Team & Branches	Team	Members, branches and audit log.

The scope bar: province and district filters

Every dashboard page except Ecosystem, National Map, Advisories, Programmes and Team has a header bar with:

- The organisation name and a line "Scope: National · updated 14:32:10" (or the province or district you chose, and the time of the last load).
- A **Province** drop-down (**All provinces** plus every province that has at least one sharing farm).
- A **District** drop-down (**All districts** plus each district, with its number of sharing farms in brackets, narrowed to the chosen province).
- A refresh button (circular arrow) to reload the numbers.

When you pick a province, the district list resets. Picking a district narrows everything to that district.

> **Note:** If your account belongs to a district office or camp (a branch, see "Team & Branches"), your scope is fixed to that district and you cannot widen it. A provincial branch is fixed to its province but can pick districts inside it. Headquarters members see the nation.

If something goes wrong. A red banner shows the message. "Not authenticated" means you must sign in again. "Permission denied: government / partner access required" means the account has no government role. "Permission denied: you need view access to gov-dashboards" means the administrator has switched the dashboards off for you.

National Overview

What it is for. The headline picture for the chosen scope.

What you will see

Eight number tiles:

Tile	What it counts
Farms reporting	Farms and cooperatives that are active and have agreed to share. The small text shows "x% of N farms opted in", where N is every active business account on the platform (farms and vendors together), so the percentage can look low.
Districts covered	Districts that have at least one sharing farm, with the number of provinces.
Active enterprises	Active enterprises (for example a maize field, a broiler flock), with the number of active batches or cycles.
Records (30 days)	Production records entered in the last 30 days, with the number of harvest records and total harvest units.
Unresolved farmer reports	Farmer-reported problems not yet resolved. Turns amber when above zero.
Critical alerts open	Unresolved alerts of critical severity from farm devices. Turns red when above zero.
Active market listings	Active marketplace listings from sharing farms.
Carbon offsets logged	Total kilograms of CO2-equivalent offsets recorded.

Below the tiles:

- **Weekly activity (12 weeks)**: a chart with three lines: **Production records**, **Harvests** and **Farmer reports**, per week starting on Monday.
- **Enterprise mix**: a ring chart and list showing each enterprise category, the number of enterprises and its share in percent.
- **Top disease & pest hotspots (90 days)**: a table with **District**, **Province**, **Issue**, **Reports** and **Farms**.

> **Note:** **Good to know.** Harvest quantities are summed exactly as farms typed them. A farm recording in bags and another in kilograms are added together as plain numbers, so treat the harvest totals as an activity indicator, not a verified yield.

Ecosystem

What it is for. Shows the whole agricultural economy, not only farms: cooperatives, agro dealers, vets, equipment hire, food sellers, supply providers, service providers, processors and transport businesses. It helps you find districts where farmers have no vet, no input dealer or no buyer nearby.

Privacy rule. Counts of organisations by type and public marketplace profiles do not need consent, because they are already public or are plain counts. No organisation is named on this page. The page header says "Counts only; no organisation is named."

> **Note:** On this page the figures cover the whole country (or your branch's area). The Province and District drop-downs on other pages do not apply here.

What you will see

Six tiles:

Tile	Meaning
Organisations	All active business organisations, split into farms and vendors.
Sharing data	The percentage and number of those that opted in.
Districts	Districts and provinces that have at least one organisation.
Marketplace providers	Public provider profiles that are active, and how many are verified.
Market activity (90 d)	Hire bookings plus vet appointments in 90 days, with active listings.
Programmes	Active programmes reaching these organisations, with participant count and support value in ZMW.

Then these sections:

Section	What it shows
Organisations by type	A table of business type (Farms, Cooperatives, Agro dealers, Vets, Equipment hire, AgriFood sellers, AgriSupply, AgriServices, Processors, Transport) with **Total**, **Sharing** and **Districts**.
Participants by district	A stacked bar chart, one bar per district, coloured by business type.
Service coverage by district	A table with **Province**, **District**, **Farms**, **Vets**, **Dealers**, **Hire**, **Processors**, **Transport**, **Score** and **Gaps**.
Marketplace providers (public profiles)	Table by provider type: providers, verified, districts, average rating, services.
Market activity (last 90 days)	Equipment-hire bookings (with completed count and ZMW value), vet appointments (with completed), active listings, contracts fulfilled (with value), and a line of listings by commodity.
Programme coverage by district (all partners)	District, programmes, participants, support value and partner names.
Programmes running in scope	Each programme with its partner, partner type, participants, districts, ZMW support and the participant types it targets.

How the service coverage score works

The **Score** is out of 5. A district earns one point for each of these that exists: a vet, an input dealer, equipment hire, a processor or buyer, and transport.

- Marketplace provider profiles in the district count as well as registered businesses.
- "Dealers" includes agro dealers and AgriSupply providers.
- "Processors" includes processors and AgriFood sellers.
- A number is shown in red when it is zero and the district has farms.
- The **Gaps** column lists, for districts with farms, what is missing: "No veterinary service", "No input dealer", "No equipment hire", "No processor / buyer", "No transport". A district with none missing shows "Fully served".

- Score colours: green for 4 or 5, amber for 2 or 3, red for 0 or 1.

> **Note: Good to know.** The market-activity, listing and programme figures on this page are counted over all organisations in scope, as the page header says, not only those that opted in. Only identities are protected (nobody is named).

National Map

What it is for. Shows every district as a circle on a map of Zambia so you can see where organisations, programmes, disease reports and services are concentrated.

Before you start. You need the dashboards permission. The map needs an internet connection to load the background map.

Step by step

1. Open **National Map**.
2. The heading line reads, for example, "Zambia · 120 organisations in 14 districts · 80 programme participants · 12 disease / pest reports (90 d). Districts are drawn at their centroid; nobody is identified."
3. Use the **Colour districts by** drop-down (top right) to choose the number that sizes and colours the circles.
4. Use the checkboxes at the bottom left of the map to switch layers on or off.
5. Zoom with the mouse wheel, drag to move.
6. Hover over a circle for a quick summary; click a circle (or a row in the right-hand list) to open the district panel.
7. In the panel, press **Open {district} dashboards** to jump to the National Overview filtered to that district. Press the X to go back to the list.

Colour options (metrics)

Option	Hint on screen	What the circle shows
All organisations	Farms, cooperatives and every vendor type	Number of organisations.
Farms & cooperatives	Producers only	Number of producers.
Vendors	Dealers, vets, hire, processors, transport…	Number of vendors.
Sharing data	Organisations that opted in	Number that consented.
Programme participants	Enrolled in any partner or government programme	Active enrolments.
Disease / pest reports	Last 90 days, consenting farms	Farmer-reported problems (excluding "success" reports).
Service coverage	0 = no services near farms, 5 = fully served	Coverage score; all circles are the same size, coloured green (4 or 5), amber (2 or 3), red (0 or 1).

For the other options, the circle gets bigger and darker (pale yellow to dark brown) with larger numbers. Hotspot colouring uses grey for zero and then amber, orange and dark red as reports rise.

Layers (checkboxes)

Layer	What it draws
Districts (participants)	The main circles.

Layer	What it draws
Disease / pest hotspots	Red dotted rings around districts with reports.
Programmes	A purple dot beside districts with enrolled participants; size grows with the number of programmes.
Weather stations	Blue dots for weather stations of sharing farms, rounded to about 1 kilometre so a station cannot point to one farm.
Marketplace providers	Orange dots (colour by type) for active public provider profiles.

A dashed circle outline means the district is not in the built-in list of district centres, so the circle sits at the middle of its province ("placed at province centroid"). A note under the layers says how many organisations have no usable district and are not drawn.

The district panel shows tiles for **Organisations**, **Farms**, **Vendors**, **Sharing data**, **Programmes**, **Participants**, **Support (ZMW)**, **Reports 90 d**, **Stations** and **Providers**. Below are a **By type** list (for example "Farms 12", "Vets 1"), **Service coverage** with the score and gaps, **Hotspot categories** (Crop disease, Pest, Animal disease, Nutritional, Yield issue, Weed, Other) and **Partners active here**.

Good to know

- No individual farm is ever drawn.
- Hotspot and weather-station layers use only farms that gave consent.
- If your account is limited to a branch, the map shows only your area.

Production

What it is for. Looks at what farms are recording.

What you will see

- **Harvest volume by week (units, as recorded)**: a bar chart over 12 weeks.
- **Enterprise mix**: the ring chart again.
- **Enterprises by category**: a table with **Category**, **Enterprises**, **Active batches** and **Farms**.

Markets & Prices

What it is for. Prices and supply reported by sharing farms.

What you will see

Table	Columns
Commodity prices reported by farms	**Commodity** (with unit), **Latest**, **As of**, **30-day avg**, **Range (30d)**, **Samples**.
Marketplace supply (active listings)	**Commodity**, **Listings**, **Farms**, **Quantity available**, **Avg asking price**.

"Latest" is the most recent price ever reported for that commodity, unit and currency. The 30-day average, range and sample count use the last 30 days only; where there are no samples they show a dash.

Disease & Alerts

What it is for. Early warning of disease and pests.

What you will see

- **AI diagnosis severity (90 days)**: horizontal bars for None, Low, Medium, High and Critical, coloured from green to red.
- **Farmer-reported issues by type (90 days)**: bars by category.
- **Hotspots by district**: **District**, **Province**, **Issue**, **Reports**, **Farms affected**.
- **Diagnoses by analysis type**: **Analysis**, **Severity** (coloured label) and **Count**.

Empty states read "No AI diagnoses in scope." and "No farmer reports in scope."

Climate & Sustainability

What it is for. Indicative climate-smart agriculture figures.

What you will see

Tile	Meaning
CO2e emissions logged	Kilograms of emissions entries and the number of entries.
CO2e offsets logged	Kilograms of offsets.
Net CO2e	Emissions minus offsets. Amber when positive, green otherwise.
Water used	Cubic metres and number of entries.
Farms certified	Number of farms with at least one certification marked "certified", and the number of active certifications.

A note states: "Figures are farmer-recorded totals across consenting farms in the selected scope. They are suitable for indicative NDC / climate-smart agriculture reporting and programme targeting, not for verified carbon accounting."

District Registry

What it is for. A continuously updated substitute for a periodic census: counts per district of consenting farms. Individual farms are not identified.

Columns: Province, **District**, **Farms**, **Enterprises**, **Active batches**, **Records (30d)**, **Open alerts** (red when above zero) and **Unresolved reports** (amber when above zero). The empty state reads "No data in this scope yet."

Advisories

What it is for. Sending a message to every member of every sharing farm in a chosen area, for example a fall armyworm warning for Central Province.

Before you start. You need the **Advisories** permission with "create". The administrator has it. A dashboard viewer does not.

Step by step

1. Open **Advisories**. The left card is **Issue an advisory**.
2. Fill in the form.
3. Press **Send advisory**.
4. A green line reports how many farms and people received it: "Sent to 12 farms (37 people)."

Field	Notes
Title	Required, up to 200 characters.
Message to farmers	Required.
Category	**Weather warning**, **Disease / pest alert**, **Market / price notice**, **Programme / subsidy**, **General advisory**.
Priority	**Info**, **Warning**, **Critical**.
Province	**All provinces** or one province.
District	**All districts** or one district of the chosen province.
Enterprise type	**All enterprise types**, or one of: Crop, Livestock, Aquaculture, Horticulture, Dairy, Apiculture, Greenhouse, Mixed ("… farms only").

Who receives it. Every active member of every consenting farm or cooperative in the area (and with the chosen enterprise type, if you set one). The message arrives as an in-app notification titled "[Chongwe] Your title" with your organisation's name at the bottom. Vendors are not included, because advisories go to the farming businesses in the production dashboards.

Advisories issued (right card) lists your organisation's past advisories: title, message, a coloured priority label, then category, area (district, province or National), enterprise type, "farms / people reached" and the date and name of the sender. With none, it reads "No advisories issued yet."

Good to know

- If you belong to a branch, your area is fixed to the branch's district or province and your choice is overridden.
- There is no edit or delete: a sent advisory cannot be recalled.

If something goes wrong

Message	Meaning
Invalid advisory category / Invalid advisory priority	The value was not one of the lists above.
Government account has no organisation	Contact your administrator.
Permission denied: you need create access to advisories	Ask the administrator for access.

Programmes (for government)

The **Programmes** page is the same programme workspace that partners use. A government organisation can run its own programmes (for example a subsidised input scheme). See Chapter 4. A **Dashboard viewer** has read-only access: the **New programme** and other buttons may be shown, but the platform refuses saves with "Permission denied: you need create access to programmes".

Team & Branches

What it is for. Adding colleagues, setting their role and page access, and arranging offices.

Three tabs: Members, Branches, Audit log.

Members. Table with **Member**, **Role**, **Branch**, **Access**, **Status** and action buttons. Only an administrator can use the actions: **Add member** (Full name, Phone, Email optional, Role, Branch, optional password; a temporary password is shown once), change role, change branch, the shield button for per-page permissions (a grid of

View, Create, Edit, Delete for each module with "Reset to role default"), make or remove administrator, deactivate or reactivate. Non-administrators see "read-only (you are not an administrator)".

Branches. For a government organisation the kinds are **Headquarters**, **Provincial office**, **District office (DACO)**, **Agricultural camp** and **Research station**. A branch has a name, optional code, province, district, address, phone and a **Headquarters** checkbox. The rule: members of a district office or camp only see and act on their own district; provincial members see their province; headquarters sees the nation. A branch with no members can be deleted.

Audit log. Administrators see who changed whose access and when.

Chapter 3: Extension Officers and Supervisors

What this account is for

An **extension officer** is a government or NGO field adviser who looks after a list of farms (the **caseload**) in a district or camp. The officer sees each farm by name, sees the signals that say a farm needs help, logs visits, sets follow-ups, closes farmer problem reports and sends advice. This replaces the paper visit book.

Consent is the gate. An officer can only add farms that (a) have turned on data sharing and (b) are inside the officer's working area. The farm is told when it is added, and the farm can see its officer and visit log.

Registering

Use **Register free**, **Gov / Partner** tab, card **Extension officer**. **Province** and **District** are required for this role because they decide the working area. See Chapter 2 for the other fields.

Role	What it is for	Default access
Extension officer	Caseload of farms, visits, direct advice.	View dashboards, registry, programmes, enrolment and support; view, create and edit caseload and visits; create advisories.
Extension supervisor	Oversees officers in the branch, issues advisories.	View dashboards, registry and settings; full access to caseload and visits; create advisories; view, create and edit programmes, enrolment, support, M&E and notices.

> **Note:** A person who registers the organisation is its administrator and sees every page, including **Team & Branches**. Officers added later by an administrator only see the pages their role allows.
>
> **Note:** The extension screens are the same for officers and supervisors. There is no separate "all officers" overview page: each person sees their own caseload and visits.

Working area. The area is the district (or, if none, the province) of the officer's organisation. If the officer belongs to a district-office or camp branch, the branch's district wins. The working area is shown in the page header: "Working area: Chongwe".

The extension screen

Sidebar pages (shown only when permitted):

Page	What it is
My Caseload	Your farms, ranked by priority.
Visits & Follow-ups	Log a visit and list visits.
Add Farms	Find consenting farms in your area and add them.

Page	What it is
Programmes	Programme tools (Chapter 4), read-only by default for officers.
Team & Branches	Same as Chapter 2.

The sidebar footer reads "Only farms that opted in to data sharing in your area can be added to your caseload."

My Caseload

What it is for. See at a glance which farms need you first.

What you will see

Seven tiles:

Tile	Meaning
Farms on caseload	Farms you have added.
Need attention	Farms with a priority score of 3 or more.
Unresolved reports	Open farmer reports across your caseload.
Follow-ups overdue	Your follow-up dates in the past that are not marked done.
Follow-ups this week	Follow-ups due from today to seven days ahead.
Visits (30 days)	Visits you logged in the last 30 days.
Farms available	Consenting farms in your area not yet on your caseload.

The **Caseload — highest priority first** table has these columns:

Column	Meaning
Priority	A coloured number: red at 8 or more, amber at 3 to 7, grey below 3.
Farm	Farm name, then district and the director's name.
Enterprises	Number of active enterprises and their categories.
Alerts	Open alerts; red text shows how many are critical.
Reports	Unresolved farmer reports.
Severe AI dx	AI diagnoses of high or critical severity in the last 30 days.
Last visit	The date of your last visit to that farm, or "never".
Follow-up	The soonest open follow-up date; red with "overdue" if past.

How the priority score is worked out. Each farm scores: 5 points per critical alert, plus 2 per open alert, plus 3 per unresolved report, plus 3 per severe AI diagnosis in 30 days, plus 4 if a follow-up is overdue, plus 2 if you have never visited. Higher scores come first; ties go alphabetically.

An **Add farms** button on the table opens the **Add Farms** page. With an empty caseload you see: "No farms on your caseload yet. Use Add farms to pick consenting farms in your area."

Click any row (or **Open →**) to open the farm.

Add Farms

What it is for. Building your caseload.

Step by step

1. Open **Add Farms**. The card is titled "Farms in your area that opted in to data sharing".
2. Optionally type part of a farm name in **Search by farm name**. The list updates after a short pause. It shows up to 100 farms, sorted by name.
3. Each row shows the farm name, district and province, number of enterprises and, if any, "n open reports".
4. Press **Add to caseload**.
5. A green line says "{farm} added to your caseload — the farm has been notified."

What the farm gets. Every active member of the farm receives a notification titled "Extension officer assigned": "{your name} ({your organisation}) is now your extension officer. Contact: {phone or email}."

If something goes wrong

Message	Meaning
Farm not found in your working area, or it has not opted in to data sharing	The farm is outside your area or has withdrawn consent.
No more farms available in your working area.	Everyone eligible is already on your caseload.

> **Note: Good to know.** Only farm accounts appear here, not other business types. Farms must have their province and district set in settings, or they will not match your area (see Chapter 6).

The farm view

Click a farm on the caseload.

Header. A **Caseload** back link, the farm name with its priority number, "district, province", the director's name and phone (tap to call), and two buttons: **Log visit** and **Remove**.

- **Remove** asks "Remove this farm from your caseload?" and, if you confirm, ends the assignment. Past visits stay on record. You can add the farm again later.

Tiles: Enterprises, **Active batches**, **Open alerts**, **Unresolved reports**, **Records (30d)**.

Farmer reports. A list of the farm's problem reports (up to 50, unresolved first). Each shows the title, category and crop or animal, description, the AI diagnosis if there is one, date, a severity label and either **Resolved** or a **Resolve** link.

To resolve a report:

1. Press **Resolve**.
2. Type what was done or advised in the box "What was done / advised".
3. Press **Save** (disabled until you type something). **Cancel** closes the box.
4. The report shows as resolved with your notes and your name, and the farmer who submitted it is notified. The page says "Report resolved — farmer notified."

Send advice to this farm. A small form: **Title**, **Message**, a priority drop-down (**Info**, **Warning**, **Critical**) and **Send**. It delivers an in-app notification to every active member of this one farm and shows "Advice sent to {n} people." Your name and organisation are added to the message.

Recent AI diagnoses. Up to eight, with severity, analysis type, the diagnosis text and date.

Alerts. Up to eight alerts with severity, title (struck through if resolved) and source.

Enterprises. Name, category, production type and number of active batches.

Visit history. All visits to this farm (by any officer), newest first.

Logging a visit

Before you start. The farm must be on your caseload, and you need the "visits create" permission.

Step by step

1. Either press **Log visit** on a farm's page, or open **Visits & Follow-ups**, where the form is always shown at the top.
2. Fill in the form **Log a visit**.
3. Press **Save visit**.

Field	Required	Notes
Farm drop-down	Yes (only on the Visits page)	Lists your caseload farms.
Date	Yes	Defaults to today.
Visit type	Yes	**Field visit**, **Phone consultation**, **Video consultation**, **Training / field day**, **Follow-up**.
Purpose	Yes	For example "Armyworm scouting".
Findings	No	What you observed.
Recommendations (sent to the farm as a notification)	No	Your advice.
Follow-up date	No	When you plan to check again.
Related farmer report	No	Shown only when the farm has unresolved reports. Links the visit to that report.
Notify farm of recommendations checkbox	Ticked by default	If ticked and you wrote recommendations, every active member of the farm gets a notification titled "Extension visit: {purpose}".

After saving you see "Visit logged." A farm that is not on your caseload gives "Farm is not on your caseload". An unknown visit type gives "Invalid visit type". A report that does not belong to that farm gives "Farmer report not found on this farm".

Visits & Follow-ups

What it is for. Your own log across all farms, and the follow-up list.

What you will see

- The **Log a visit** form (or "Add farms to your caseload before logging visits." when your caseload is empty).
- A card titled **All visits** with a checkbox **Pending follow-ups only**. When ticked, the card is titled **Pending follow-ups** and lists only visits that have a follow-up date not yet done, soonest first.

Each visit shows the purpose, type and farm name, then **Findings:** and **Advice:**, the visit date, and the follow-up status: "Follow-up done", or "Follow-up {date}" in amber (red with "overdue" if past) with a **mark done** link. Press **mark done** when you have completed the follow-up. It does not delete the visit.

What the farm sees

See Chapter 6: the farm sees your name, organisation, phone and email, and its visit log with your findings and advice.

Good to know

- You cannot see farms that have not opted in, and you cannot see farms outside your area.
- The extension screen has no page for area-wide advisories. Use **Send advice to this farm** for one farm. To broadcast to a whole district, ask a colleague whose account uses the government screen (an administrator) to send an advisory from the **Advisories** page described in Chapter 2.
- The **Programmes** tab shows programmes run by your own organisation. Officers cannot create or edit them unless an administrator grants it.

Chapter 4: Programme Partners — Running a Programme

What this account is for

A **programme partner** is a donor, NGO, FAO-style project or government scheme that supports farms and other agricultural businesses. A **programme** is a funded piece of work, for example "Hand-in-Hand Zambia", with a budget, a target area, a list of participants, deliveries (inputs, cash, training) and results to report to the donor.

Partners are different from government viewers in one important way. A partner sees the **name** of every organisation it has enrolled (that is what enrolment means). Everything else stays de-identified and consent-gated.

Registering and roles

Use **Register free**, **Gov / Partner** tab, card **Supporting partner (FAO, donor, NGO)**. The organisation type is set to **Donor programme** for you (you may change it to **NGO / development partner**). See Chapter 2 for the form. The person who registers is the organisation's administrator.

Partner roles (for NGO and donor organisations):

Role	What it is for	What it can do
Administrator (partner_admin)	Manages team, branches and programmes.	Everything below, plus Team & Branches.
Programme manager (partner_manager)	Runs programmes: enrolment, support, notices.	Full control of programmes, enrolment, support ledger, M&E and notices. View-only on the dashboards and registry. Can view and create advisories.
M&E officer (partner_me_officer)	Records indicator readings and views results.	View programmes, enrolment, support, dashboards and registry. Create and edit results readings (see the note on screens in Chapter 5).
Observer (donor / auditor) (partner_observer)	Read-only access to programmes and dashboards.	View everything in programmes, enrolment, support, M&E, notices, dashboards and registry. Can also create the donor report.

> **Note:** If your organisation was registered as a **government** organisation (not NGO or donor), the government role list from Chapter 2 applies instead, and the **Programmes** page in the government screen offers the same programme tools.

> **Watch out:** On the Programmes pages, buttons are shown to everyone who can open the page. If your role is read-only and you press a save button, the platform refuses and a red message appears, for example "Permission denied: you need create access to programmes". Nothing is changed.

The partner screen

The sidebar has three sections:

Section	Pages
Programmes	**Programmes**
District data	**National Overview**, **Ecosystem**, **National Map**, **Production**, **Markets & Prices**, **Disease & Alerts**, **Climate & Sustainability**, **District Registry**, **Advisories**
Admin	**Team & Branches**

The "District data" pages are the same as the government pages in Chapter 2 and show the same de-identified numbers. A page appears only if your role allows it (for example the M&E officer and observer have no **Advisories** page). The sidebar footer says: "Enrolled farms are visible by name; everything else is de-identified and consent-gated."

The programme list

Open **Programmes**.

Top tiles

Tile	Meaning
Programmes	Number of programmes your organisation runs, with how many are active.
Participants enrolled	Distinct organisations enrolled across your programmes.
Districts reached	Distinct districts of those participants.
Total budget	Sum of all programme budgets.
Support delivered	Value of every support record.
Budget used	Support delivered divided by total budget, as a percentage (a dash if no budget).

Programme cards under **Your programmes** show: name, funder and reference code, dates (start → end), a status label, **Enrolled** (for example "40 / 100"), **Support** in the programme currency, **Budget used** percentage, a green progress bar when an enrolment target is set, and a line of targeting such as "Chongwe, Kafue · Farms, Cooperatives · Crop". With none yet: "No programmes yet. Create one to start enrolling farms and vendors."

Programme statuses

Status	Meaning
Planning	Being set up.
Active	Running. The **Enrol participants** button and "Enrol from {district}" on the map are shown only when active.
Suspended	Paused. The platform refuses new enrolments ("Programme is suspended; enrolment is not open").
Closed	Finished. Enrolment is refused ("Programme is closed; enrolment is not open").

Press a card to open that programme's workspace.

Creating a programme

Before you start. You need "programmes create" permission (administrator or programme manager). Decide the budget, the target area, who may take part and which indicators you will report.

Step by step

1. On the programme list, press **New programme** (top right).
2. Fill in the form (table below).
3. Press **Create programme**. You land in the new programme's workspace.

The fields

Field	Required	Notes
Programme name	Yes	For example "Hand-in-Hand Zambia". Refused if empty: "Programme name is required".
Funder	No	Pre-filled with "FAO". Change it, for example to "EU" or "USAID".
Reference code	No	The donor or internal reference, for example GCP/ZAM/123.
Objective / description	No	A short statement. It appears on the donor report.
Start	Yes	Defaults to today. Refused if missing: "Start date is required".
End	No	Must not be earlier than the start: "End date must be after start date".
Budget	No	A number of zero or more ("Budget cannot be negative").
Currency box	No	A short code, pre-filled with "USD". Change to ZMW if you budget in kwacha.
Enrolment target (participants)	No	How many participants you aim to enrol. Drives the percentage and progress bar.
Status drop-down	Yes	**Planning**, **Active**, **Suspended**, **Closed**. Pre-set to Active.
Target provinces, comma-separated (blank = all)	No	For example "Lusaka, Central".
Target districts, comma-separated (blank = all)	No	For example "Chongwe, Kafue". See **Pick on map** below.
Who can be enrolled buttons	No	Switch on any of: Farms, Cooperatives, Agro dealers, Vets, Equipment hire, AgriFood sellers, AgriSupply, AgriServices, Processors, Transport. Blank means any organisation that has opted in.
Target enterprise types (farms only)	No	Crop, Livestock, Aquaculture, Horticulture, Dairy, Apiculture, Greenhouse, Mixed. A farm qualifies if it has at least one active enterprise of a chosen type.
Results framework (indicators)	No	A quick list. See below.

Pick on map. Next to the districts box, the button **Pick on map** opens a small map with a dot for every district. Use the province drop-down in the map's header to show one province, then click a dot to select a district (it turns green, and the box and a count update), and click again to remove it. **Clear** removes all, and the X closes the map. This writes the district names for you.

Quick indicators. Each row has four boxes: **key** (a short code, for example farms_trained; spaces become underscores and capitals become small letters), **Label** (for example "Maize yield"), **Unit** and **Target**. Press **+ Add indicator** for another row and the X to delete a row. The form starts with one example, "Farmers trained". Rows without both a key and a label are dropped. Keys must be unique ("Indicator keys must be unique and non-

empty"). Detailed settings (baseline, dates, means of verification, breakdowns, computed values) are added later in the **Results framework** tab (Chapter 5).

> **Tip:** If you belong to a district or provincial branch, your programmes are automatically confined to that area. A district-branch member cannot target another district: "Your branch only runs programmes in {district}".

Editing. In the workspace press **Edit programme** to open the same form filled in; the button reads **Save changes**. You need "programmes edit" permission. A message "Programme updated." confirms.

Unknown participant types are refused: "Unknown participant type(s): …".

Who is eligible

An organisation is **eligible** for a programme when all of these are true:

- It is an active private-sector account with **data sharing turned on** (farm or any vendor type).
- Its business type is in the programme's "Who can be enrolled" list (if the list is empty, any type).
- Its province is in the target provinces, if you set any.
- Its district is in the target districts, if you set any.
- It has an active enterprise of a target type, if you set any (this applies to farms only).

Organisations that match and are not yet enrolled appear in the eligible list (below), and as amber circles on the programme map.

The programme workspace

Press a programme card. At the top:

- A **Programmes** back link, the programme name, a status label, and "funder · start → end".
- **Donor report** (see "Reports for donors").
- **Edit programme**.

Below are six tabs: **Results**, **Map**, **Participants (n)**, **Support ledger (n)** (n is the number of support records), **Results framework** and **Notices**.

Results tab

What it is for. Live progress against the target and budget.

Block	What it shows
Enrolment	Number enrolled over the target, the percentage with a green bar, and a line "x active · y districts · z enterprises · w active batches".
Budget used	Amount of budget used in the programme currency, the percentage with a bar (amber if above 100 percent) and "n support records to m farms".
Records since start	Production records the participating farms entered since the programme start date.
Harvest logged	Total harvest quantity and number of harvest records since start.
Market activity	Participants' active marketplace listings and contracts fulfilled since start.
Participants by type	How many participants of each business type.
Women · youth	Number of women-headed and youth-led active participants, household members reached and how many profiles are recorded. The block is amber when some active participants have no profile yet.
Reports resolved	Farmer problem reports closed since the start.

Block	What it shows
Reports open	Farmer problem reports still open.

Below: **Support by type** (a bar chart of value by type), **Indicator progress** (each indicator with its latest value over target, a progress bar and an "as of" date) and **Results by district** (**Province**, **District**, **Farms**, **Records**, **Harvest**, **Support value**).

> **Note:** "Records", "Harvest" and "Reports" come from the farms' own record-keeping, for farms that are enrolled. Harvest units follow what each farm typed (kg, bags, birds), so they are added as plain numbers.

Map tab (programme map)

What it is for. Shows where participants are, where support has gone and where eligible organisations still wait to be enrolled.

How to read it

Symbol	Meaning
Purple filled circle	Enrolled participants in that district. Bigger means more.
Amber hollow circle	Eligible organisations not yet enrolled. Bigger means more.
Green ring	A district named in your targeting.
Small white circle with green edge	A targeted district with nobody eligible or enrolled yet.
Dashed outline	The district is not in the built-in list, so the circle sits at the middle of its province.

The line above the map reads, for example, "Hand-in-Hand: 40 participants in 6 districts · 85 eligible organisations not yet enrolled · ZMW 120,000 support delivered." If some participants have no usable district, it adds how many are not drawn.

Step by step

1. Click a circle or a row in the right-hand list (rows are sorted by participants, then eligible).
2. The panel shows **Participants**, **Eligible**, **Support events** and **Support (ZMW)**, then "Enrolled by type" and "Eligible, not yet enrolled" by business type.
3. If the programme is active and the district has eligible organisations, press **Enrol from {district}**. This jumps to the **Participants** tab with the district filter already filled in.
4. Press the X to go back to all districts.

Participants tab (enrolling and managing)

What it is for. Enrolling organisations and tracking their status.

Enrolling one by one

1. Open the **Participants** tab and press **Enrol participants** (shown when the programme is active).
2. A card **Eligible organisations (opted in to data sharing, matching targeting)** opens with three boxes: **Search by farm name**, **District (from the map)** and **Cohort (optional, e.g. 2026 Season A)**.
3. Narrow the list. It shows up to 200 organisations, sorted by name. Each row has the name, business type, district and province, and enterprise categories.

4. Type a cohort name if you want to label this group (for example "2026 Season A" or "Camp 3"). The cohort you typed is applied to the next organisation you enrol.
5. Press **Enrol** on a row. The row disappears and a green message says "{name} enrolled — the organisation has been notified."
6. Repeat for each organisation. Press the X to close the card.

> **Note:** There is no "select all" or bulk-enrol button. Enrolment is one organisation at a time. To enrol many in a district, filter by that district and press **Enrol** down the list. Set the cohort first so every enrolment carries it.

What the organisation gets. Every active member receives a notification titled "Enrolled in {programme}": "{your organisation} has enrolled your farm in "{programme}" ({funder}). You will receive programme notices and support records here."

The Enrolled participants table

Column	Meaning
Participant	Name of the organisation.
Type	Business type (Farms, Cooperatives, Agro dealers and so on).
Household	If a household profile exists: "Woman-headed", "Man-headed" or "Head n/a", plus "· youth" and "· n members". Press it to open the profile. If none, an amber **Add profile** link.
District	Where it is based.
Cohort	Cohort label or a dash.
Evidence	For farms and cooperatives: records since start and harvest quantity. For other types: active listings and contracts fulfilled.
Support	Number of support records and their value in the programme currency.
Status	**Active**, **Completed** or **Withdrawn**.
Actions	For active rows: **Complete** and **Withdraw**. For others: **Reactivate**.

Enrolment statuses

Status	Meaning
Active	Takes part. Counts in the indicator values, notices and support recording.
Completed	Finished the programme. No longer counted as active.
Withdrawn	Left or was removed. No longer counted as active.

Pressing **Complete** or **Withdraw** shows "{name} marked completed." or "{name} marked withdrawn." **Reactivate** sets it back to active. An organisation that was withdrawn can be enrolled again; its enrolment date is reset.

If something goes wrong

Message	Meaning
Farm is not eligible: it must have opted in to data sharing and match the programme targeting	The organisation withdrew consent or no longer matches.
Farm is already enrolled	It is already active in this programme.
Programme is closed; enrolment is not open (or suspended)	Change the programme status first.
Permission denied: you need create access to enrolment	Ask the administrator.

Household profile (from the partner side). Press the **Household** cell to open **Household profile — {name}** and fill the same form the farm sees (see Chapter 5 and Chapter 6). A note says it is "Used only for disaggregated programme results (women, youth, household members reached). The participant can also fill this in from their own settings." You can save a profile only for organisations enrolled in one of your programmes, and only if you have "programmes edit" permission: "Permission denied: only the organisation's director / admin or a partner it is enrolled with can set this profile".

Support ledger tab

What it is for. The record of what the programme actually delivered: inputs, cash, training.

Record support delivered

1. Open **Support ledger**. The card **Record support delivered** needs at least one active participant ("Enrol farms first.").
2. Fill in the form.
3. Press **Record**.

Field	Required	Notes
Participant drop-down	Yes	Active participants, shown as "name — district".
Support type drop-down	Yes	**Input voucher**, **Seed / seedlings**, **Fertiliser**, **Livestock / fingerlings / chicks**, **Equipment / tools**, **Cash grant**, **Training**, **Extension service**, **Market linkage**, **Working capital / grant**, **Certification support**, **Digital tools / devices**, **Cold chain / storage**, **Other**.
Date delivered	Yes	Defaults to today.
Description	Yes	For example "50kg D-compound + 10kg SC627 seed".
Qty and **Unit**	No	Quantity defaults to 1.
Value and currency box	No	Money value of the delivery. Currency defaults to the programme currency. This value adds up to "Support delivered" and "Budget used".
Voucher / GRN reference	No	Voucher, goods-received or receipt number.
Notify farm checkbox	Ticked by default	Sends the farm a notification titled "{programme}: {type} received" with the description, quantity, value and reference.

A green message says "Support recorded — the farm has been notified." (or just "Support recorded.").

The Support ledger table lists **Date**, **Farm**, **Type**, **Description**, **Qty**, **Value** and **Ref**. With nothing recorded: "Nothing recorded yet."

If something goes wrong

Message	Meaning
Farm is not actively enrolled in this programme	Reactivate or enrol the participant first.
Value and quantity cannot be negative	Use zero or more.
Invalid support type	The type was not on the list.

> **Watch out:** The ledger has no edit or delete. If you record the wrong amount, tell your administrator; there is no screen to remove a support record.

Notices tab

What it is for. Sending a message to everyone actively enrolled.

Step by step

1. Open **Notices**. The card is titled **Send a notice to all actively enrolled farms**.
2. Type a **Title** (for example "Input collection this Friday") and a **Message**.
3. Choose a priority: **Info**, **Warning** or **Critical**.
4. Press **Send notice**. A green line says "Notice sent to 40 farms (122 people)."

Each active member of each actively enrolled organisation receives a notification titled "[{programme}] {title}" with your organisation name at the bottom. Completed and withdrawn participants are not included. There is no way to pick individual recipients; for one farm, an extension officer can use **Send advice to this farm**.

Reports for donors

What it is for. A ready-made results report for the donor, as PDF or Excel.

Before you start. You need "programmes view" permission. Observers can export too.

Step by step

1. In the programme workspace press **Donor report** (top right).
2. A small card **Results report — reporting period** opens with **From** (defaults to the programme start) and **To** (defaults to today).
3. Press **PDF** or **Excel**. The file opens in a new tab and a green message says, for example, "PDF results report generated for 2026-01-01 → 2026-10-18."

What the report holds

Section	PDF	Excel sheet
Cover	Partner, programme name, period, funder, reference, status, dates, objective, targeting	**Summary**
1. Summary of results	Farms enrolled against target, districts, active batches, production records, harvest, support delivered, budget used, issues resolved and open, notices issued	**Summary**
2. Results framework	Each indicator against baseline and target with progress, automatic values marked with a star, the sex and age breakdown, participant figures and the reading history	**Indicators**, **Indicator readings**
3. Enrolment and production	Per district: farms, active, records, harvest, support; plus the list of enrolled farms	**Districts**, **Enrolled farms**
4. Support delivered	By type and the full ledger	**Support by type**, **Support ledger**
Methodology	A note that enrolment, support and readings are recorded by the partner and production figures come from the farms' own records	—

The period limits the production records, harvest and support rows. The report uses the same calculations as the screens, so it matches what you see.

If something goes wrong. "Period end must be after period start" means the dates are reversed.

Chapter 5: Programme Partners — Monitoring and Evaluation (Results Framework)

What it is for

The **Results framework** tab is a logical framework (logframe). It lets you write the chain of results your donor expects, attach indicators to each level, record readings and let the platform compute indicators for you from participants' own records.

Before you start. You need "programmes edit" permission to build or change the framework (administrator or programme manager). Everyone with programme access can read it.

> **Watch out:** In the current screens, the framework-editing buttons (**Goal**, **Outcome**, **Indicator**, **+ Reading**, edit and delete icons) appear only for users who have "programmes edit" permission. The M&E officer role normally has view access to programmes and edit access to M&E, so an M&E officer may see the framework but not the buttons. If that happens, ask an administrator to give the M&E officer edit access to **Programmes** in **Team & Branches**.

Key words

Word	Plain meaning
Goal / impact	The big change the programme hopes to contribute to.
Outcome	A medium-term change for participants (for example higher yields).
Output	What the programme delivers directly (for example farmers trained).
Activity	A piece of work that produces an output.
Indicator	A number you track to show progress.
Baseline	The starting value before the programme.
Target	The value you aim to reach.
Means of verification	How you will prove the number (for example training registers).
Disaggregation	Splitting a number by group (women and men, youth and adults).

The result chain

The chain has four levels, each with a coloured label: **Goal / impact**, **Outcome**, **Output**, **Activity**.

Building the chain

1. Open the **Results framework** tab. With nothing there, you see "No results framework yet. Start with the goal, add outcomes and outputs, then attach indicators — or add a computed indicator such as "Participants enrolled" straight away."
2. Press **Goal**. (This button disappears once a goal exists.) Type the **Goal / impact statement**; optionally a code (the box says "Code 1.1") and **Assumptions / risks (optional)**. Press **Save**.
3. Press **Outcome** at the top to add an outcome under the goal. Or hover over a goal and press **+ Outcome**.
4. On an outcome, press **+ Output**. On an output, press **+ Activity**. Each child sits under its parent and is indented with a line.
5. Use the pencil icon to edit a statement, and the bin icon to delete.

Rules and messages

- An outcome sits under a goal, an output under an outcome and an activity under an output. A wrong placement is refused ("An outcome cannot sit under a …").
- Deleting a result asks "Delete this {level} and everything under it?" and also removes everything below it. Indicators attached to it are kept and move to "Indicators not linked to a result".

Indicators

Press **Indicator** at the top (a free indicator, linkable later), or **+ Indicator** on any result (attached to it).

The indicator form

Field	Notes
Indicator (for example "Farmers trained in GAP")	Required. The platform makes the internal key from this label.
Unit	For example farmers, kg, ZMW.
Result drop-down	**Not linked to a result**, or any result in the chain.
Source drop-down	**Manual readings**, or a computed source (see below).
Baseline and **Baseline date**	Starting value and when it was measured.
Target and **Target date**	Goal value and the date to reach it.
Means of verification (e.g. training registers)	How you will verify.
Data source / responsible	Who or what supplies the number.
Disaggregate by buttons	**Sex**, **Age (youth ≤ 35)**, **Participant type**, **District**. The form starts with Sex and Age ticked.

Press **Save indicator**. A duplicate label gives 'Indicator key "…" already exists in this programme'.

What an indicator row shows

- The label, a green "computed" mark for automatic indicators, and "MoV: …".
- "Baseline 20 (01/2026) → Target 100 by 12/2026 · Achieved 64 farmers as of 2026-10-18 · 55%".
- A progress bar (green at 100 percent or more, blue at 50 or more, amber below).
- The breakdown by each chosen group.

How progress is worked out. If there is a baseline and it differs from the target: (current value minus baseline) divided by (target minus baseline), times 100. If there is no baseline: current value divided by target, times 100. With no target there is no percentage.

Computed (automatic) indicators

A computed indicator updates itself each time you open the page, using only **actively enrolled** participants. Pick one from the Source drop-down (each is marked with a lightning symbol):

Source	What it counts
Participants enrolled (active)	Active participants.
Women-headed participants	Active participants whose household head is recorded as female.
Youth-headed participants (≤ 35)	Participants with a youth head (see the household profile).
Household members reached	Sum of household sizes (counts 1 where no size is recorded).
Participants who received support	Distinct participants with at least one support record.
Support events delivered	Number of support records.

Source	What it counts
Training events delivered	Number of support records of type Training.
Value of support delivered	Sum of support values.
Harvest quantity logged since start	Harvest quantities participants entered since the programme start.
Active market listings	Participants' active marketplace listings.
Contracts fulfilled since start	Participants' fulfilled trade contracts since the start date.

Computed indicators do not take manual readings (the **+ Reading** button is hidden; the platform refuses with "This indicator is computed automatically from platform records; it does not take manual readings").

Breakdown groups for computed values:

- **Sex**: Women, Men, Other, Not recorded.
- **Age**: Youth (35 and under), Adult (36 to 59), Senior (60 and over), unknown. Age comes from the year of birth. If only "youth-led" is known, it is Youth or Adult.
- **Participant type** and **District**.

> **Tip:** A note under the framework reminds you: "add computed indicators "Women-headed participants" and "Youth-headed participants" — donors ask for both." For these to be meaningful, participants need household profiles (see below and Chapter 6).

Recording a manual reading

Step by step

1. On a manual indicator press **+ Reading**.
2. A card **Record reading — {indicator}** opens.
3. Fill in:

Field	Notes
Period end	The last day of the reporting period. Defaults to today.
Total value	Required. The overall number for the period.
Source / notes	For example "crop-cut survey, 40 plots".
Breakdown boxes	One box per group for each breakdown chosen on the indicator: Sex (Women, Men, Other), Age (Youth, Adult, Senior), Participant type (the main types), District (type a district name, press Enter, then fill its number).

1. Press **Record**. A green message says "Reading recorded."

Checks. For Sex and Age, the groups must add up to the total. As you type, a line such as "= 120 of 120" appears green when it matches and red when it does not. The platform refuses a mismatch ("sex breakdown (110) must add up to the total (120)") and negative numbers ("Disaggregation values cannot be negative").

The indicator row then shows the **latest reading by period** as the "Achieved" value. Older readings stay in the history.

Manual reading history

Under the framework, a card **Manual reading history** lists each reading: indicator label, notes and breakdown on the left, value and unit on the right, with the period and the name of who recorded it.

Editing and deleting

- Pencil on an indicator opens the form again.
- Bin on an indicator asks 'Delete indicator "…" and its readings?' and removes both.
- Indicators not linked to any result appear in a group titled **Indicators not linked to a result**.

> **Tip:** The quick indicators you typed on the programme form appear here automatically as indicators with a key, label, unit and target. Edit them here to add baselines, dates and breakdowns.

The household profile of participants

Disaggregated results need to know who is behind each participating organisation. The **household profile** holds that. It can be filled in by the organisation itself (Chapter 6) or by the partner it is enrolled with (the **Household** cell in the Participants tab).

Field	Notes
Head of household	**Sex — not recorded**, **Female**, **Male**, **Other / prefer not to say**.
Year of birth	For example 1990. Must be a believable year ("Birth year looks wrong"). A head aged 35 or under counts as youth.
Household size	0 to 60.
Land (ha)	Zero or more.
Female members and **Male members**	0 to 60 each.
National ID (stored hashed)	Optional. Stored only as a scrambled code, used to avoid counting the same person twice. The field then says "On file — enter to replace".
Household includes a person with a disability	Tick box.

Press **Save profile**. Only counts are shared with the partner: women, youth, household members, disability counts. The results tiles show them.

If a number is out of range, you see messages such as "household size out of range", "Land cannot be negative" or "Sex must be F, M or X".

Chapter 6: The Farmer's Side — Data Sharing, Programmes and Extension Officers

This chapter is for a farm, cooperative or vendor that is looked at by government, a programme partner or an extension officer. It explains what you control, what others can see and what you receive.

The consent switch: Share with government & partners

What it is for. Decides whether your organisation is counted in the government and partner dashboards, and whether extension officers and programmes can find you.

Before you start. Only the **director** of the organisation can change the switch or the location boxes. Other members see them greyed out with the hint "Only a director can change this". Your **province** and **district** must be filled in, because they decide which dashboards, advisories, officers and programmes can reach you.

Step by step

1. Open **Settings** (farm workspace: **Platform Settings**; vendor workspace: the **Settings** tab). The card is titled **Share with government & partners**.
2. Read the explanation: when enabled, your counts (enterprises, records, prices, reports) are included in de-identified district and national dashboards used by the Ministry of Agriculture, extension services and development partners. Your organisation's name is never shown on those dashboards. You also receive district advisories.
3. Press the switch. It turns green and the message "Sharing enabled." appears, with "Sharing since {date}". Press again to turn it off: "Sharing disabled."
4. Fill in **Province** (for example Lusaka) and **District** (for example Chongwe) and press **Save**. You see "Location saved." The note under the boxes says "Province and district place your organisation on district dashboards and target advisories to you."

What turning sharing on allows

Who	What they can do
Government and partner dashboards	Include your totals (never your name) in the production, market, disease, climate and registry figures for your district.
Advisories	Government or partner advisories for your area and enterprise type reach every member of your organisation.
Extension officers	Officers in your district can find your farm by name and add it to their caseload.
Programme partners	Partners can find you in their eligible list and enrol you. Once enrolled, they see your organisation's name and the evidence they report on (records, harvest, listings).
Lenders	Your credit summary shows "Data-sharing consent" as a plus point when you share it (see "The lender share link" below).

What turning sharing off does. From then on you drop out of the dashboards and out of the "eligible" and "available" lists, so no new officer or programme can add you. The platform does not automatically remove an extension officer or programme enrolment that already exists; if you want that to end, ask the officer or partner to remove you, or contact them by phone.

If something goes wrong

Message	Meaning
Permission denied: only a director can change data-sharing consent	You are not the director.
Only farm organisations can share data	The account is not a business account.

The household profile

What it is for. Programmes report results by sex, age and household size (for example "women-headed farms trained"). This profile gives them those counts. Only counts are ever shared; your name and details are not.

On the same Settings card there is a section **Household profile** with a button **Add profile** (or **Edit** once saved). Only the director sees the button.

Step by step

1. Press **Add profile**.

2. Fill in the form (see the table in Chapter 5): **Head of household** (Female, Male, Other / prefer not to say), **Year of birth**, **Household size**, **Land (ha)**, **Female members**, **Male members**, **National ID (stored hashed)** and the tick box **Household includes a person with a disability**.
3. Press **Save profile**. You see "Household profile saved." The summary line reads, for example, "Woman-headed · head aged 34 (youth) · 7 household members · 2 ha · ID on file".

Until you save, the card says "Not recorded yet."

Good to know

- The national ID is stored only as a scrambled code. It cannot be read back; it is only used to avoid counting the same person twice.
- A partner that has enrolled you may also fill in this profile for you from the Participants tab; you can correct it any time.
- Nobody can see the profile unless you are enrolled in a programme.

Your extension officer

When an officer adds your farm to a caseload, every active member of your organisation receives a notification: "Extension officer assigned: {name} ({organisation}) is now your extension officer. Contact: {phone or email}."

In the farm workspace **Settings**, a card **Your extension officer** shows:

- Each assigned officer's name, organisation, phone (tap to call) and email (tap to write).
- With no officer: "No extension officer is assigned yet. Officers in your district can add your farm once data sharing is enabled and your province / district are set."
- A **Visit log** listing the last ten visits: the purpose, date and officer, **Findings:**, **Advice:** and "Follow-up planned {date}" when a follow-up is still open.

You also receive notifications when the officer: logs a visit with recommendations ("Extension visit: {purpose}"), sends advice ("{title}") or resolves one of your problem reports ("Report resolved: {title}").

Development programmes you are enrolled in

When a partner enrols you, every active member receives "Enrolled in {programme}". In the farm workspace **Settings**, a card **Development programmes** appears (it is hidden until you are enrolled in at least one). For each programme it shows:

- The programme name, partner name and "funded by {funder}".
- A status label (**Active** in green) and your cohort, if any.
- **Support received** with the total value, and each delivery: type and description, reference, date and value.

You are also notified for each support record the partner chose to notify you about ("{programme}: {type} received") and for every programme notice ("[{programme}] {title}").

> **Note:** The **Your extension officer** and **Development programmes** cards are shown in the farm workspace Settings. Vendor workspaces show the **Share with government & partners** card in their **Settings** tab; programme notices and advisories still reach vendors as notifications.

The lender share link

What it is for. A farm can give a bank or microfinance institution a private, read-only credit summary built from its own records. The summary includes the programmes you take part in and your extension officer, which lenders find reassuring.

Before you start. Only a **director** or **finance manager** can create or revoke a link. Open **Credit Profile** in the farm workspace (see Part 4 — Running the Farm Business: Inventory, Sales, Finance, Credit and Reports for the score itself).

Step by step

1. In **Credit Profile**, find the card **Share with a lender**. It explains: "Creates a private, read-only link. The lender sees this summary without an account. You choose how long it lasts and can revoke it at any time."
2. Fill in **Lender** (for example Zanaco, NATSAVE, FINCA, Vision Fund), **Credit officer email / phone (optional)** and **Purpose**.
3. Choose how long the link lasts: **7 days**, **14 days**, **30 days**, **60 days** or **90 days**.
4. Press **Create share link**. A green box titled "Send this link to the lender" shows the link; press **Copy**.
5. Send the link to the lender yourself (for example by email or WhatsApp). The platform does not send it for you.

Who has access. The card to the right lists each link: lender, contact, purpose, dates created and expiry, "opened n times" and when it was last opened, with a label **Active**, **Expired** or **Revoked**. For active links there is a copy button and, for directors and finance managers, a **Revoke** button (the ban sign). A revoked or expired link stops working at once.

What the lender sees. A read-only page titled "AGRINUXES — Farm credit summary — Shared by the farm for credit assessment · read-only", with the line "Prepared for {lender} · {purpose} · link valid until {date}", and a **Print** button. It contains the farm card, **Financial performance (batch financials)**, **Monthly revenue, last 12 months**, **Trading history** and **Verification & support network**. The last card lists with ticks: data-sharing consent, extension officer assigned (with visits in 12 months), programme enrolments (programme and partner names), certifications, insurance and loan history, plus the programme support value received.

If the link is wrong, expired or revoked, the lender sees an error page that says "Ask the farm to issue a new share link from their Credit Profile."

Chapter 7: Which Account Should I Use?

Quick decision guide

If you are…	Use this account	Why
A buyer, or someone just looking for a vet, tractor or seed supplier	**Individual**	Free to browse, save favourites on the dashboard and call sellers. No farm tools.
A farmer or cooperative who wants to keep records, sell and book services	**Business / Farm** (business type Farmer / Farm or Cooperative)	Full farm workspace, marketplaces with booking forms, and the data-sharing and programme features from Chapter 6.
A vet, equipment-hire firm, dealer, food seller, supplier, service provider, processor or transporter	**Business / Farm** with the matching business type	Vendor workspace with its own tabs (see Part 6 and Part 7).
A ministry or district office that needs numbers and wants to warn farmers	**Government** (dashboard viewer or administrator)	De-identified dashboards, national map, ecosystem view, advisories.

If you are…	Use this account	Why
A government or NGO adviser who visits farms	**Extension officer** (or supervisor)	A named caseload, visit log, follow-ups and direct advice.
A donor, FAO-type project or NGO that gives inputs, cash or training	**Supporting partner**	Programmes, enrolment, support ledger, notices, results framework and donor report.
An auditor or donor representative who only reads	**Partner Observer** (added by a partner administrator)	Read-only view of programmes, results and dashboards.

Things to keep in mind

- **One login, one role.** Each account has one role. If you are both a farmer and an extension officer, use two accounts with different emails and phone numbers.
- **You cannot change account type later.** An individual who wants to run a farm registers a separate Business / Farm account.
- **The first person is the administrator.** Whoever creates a government or partner organisation becomes its administrator and sees every page. Add colleagues with narrower roles from **Team & Branches**.
- **Government and partner accounts hold no farm data of their own.** They read others' numbers (de-identified) or work with farms that agreed to be enrolled or assigned.
- **Extension supervisors, administrators and observers** are created by an administrator from **Team & Branches**; they are not choices on the public registration form (which offers only Dashboard viewer, Extension officer and Supporting partner).

Chapter 8: What Each Account Can and Cannot See

Who sees what

Information	Individual	Farm / vendor (own data)	Gov viewer	Gov admin	Extension officer	Partner manager	Partner M&E / observer
Public marketplace listings and provider profiles	Yes	Yes	Counts and map only	Counts and map only	Counts and map only	Counts and map only	Counts and map only
Their own farm records, finance, stock	No (none)	Yes	No	No	No	No	No
Another farm's name	No	No	No	No	Only farms on own caseload	Only farms enrolled in own programmes	Same as manager (read-only)
Another farm's records and reports	No	No	Totals only, never per farm	Totals only	Caseload farms only: enterprises, reports, AI diagnoses, alerts, record counts	Enrolled farms: record counts, harvest quantity, listings, support	Same, read-only
District and national totals	No	No	Yes (consenting farms only)	Yes	No (no dashboard pages)	Yes (read-only)	Yes (read-only)

Information	Individual	Farm / vendor (own data)	Gov viewer	Gov admin	Extension officer	Partner manager	Partner M&E / observer
Ecosystem and National Map	No	No	Yes	Yes	No	Yes	Yes
Farms that did not opt in	—	—	Counted as organisations only	Counted as organisations only	Never	Never	Never
Household profile	No	Own only	No	No	No	Enrolled participants only	Enrolled participants (view)
Credit summary	No	Own; can share link	No	No	No	No	No

What each role can do

Action	Gov viewer	Gov admin	Extension officer	Extension supervisor	Partner manager	Partner M&E officer	Partner observer	Partner admin
View dashboards, ecosystem, map, registry	Yes	Yes	No page	No page	Yes	Yes	Yes	Yes
Send an advisory to an area	No	Yes	No page	No page*	Yes*	No	No	Yes
Manage a caseload and log visits	No	No	Yes	Yes	No	No	No	No
Resolve a farm's problem report and send advice	No	No	Yes (caseload farms)	Yes (caseload farms)	No	No	No	No
Create or edit a programme	No	Yes	No	Yes	Yes	No	No	Yes
Enrol participants and record support	No	Yes	No	Yes	Yes	No	No	Yes
Send a programme notice	No	Yes	No	Yes	Yes	No	No	Yes
Build the results framework	No	Yes	No	Yes	Yes	See note in Chapter 5	No	Yes
Create a donor report (PDF / Excel)	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Manage team, roles and branches	No	Yes	No	No	No	No	No	Yes

*Advisories: the permission exists for these roles, but the extension screen has no Advisories page. A partner manager sees an Advisories** page and can create (not edit or delete).

> **Tip:** An administrator can change any person's page access one module at a time from the shield button in **Team & Branches**. The table above shows the standard defaults.

What the farm always controls

- Whether it is counted at all (the consent switch).
- Its province and district (so that dashboards and advisories reach it).
- Its household profile.
- Its lender links (create, copy, revoke).
- Its own users: only the director changes consent.

Privacy in one paragraph

Government dashboards show only totals from farms that said yes, and never a farm name. Partners see the names of farms they enrol, and only the evidence that matters to the programme. Extension officers see only farms they add, and only in their own area. Nobody outside a farm can read its finance, inventory, staff or credit records through these accounts.

Appendix A — The Template Catalogue

The app ships with **94 built-in templates**.

Every built-in template, grouped by category. "Stages" lists the stages a cycle created from the template will contain, in order, with the typical length where the template gives one. Every template also comes with a starter care guide (see Appendix D) and the daily record fields of its category (see Appendix B). Your company can copy and change any of them (see Part 2).

Poultry and Birds (12 templates)

Template	What it is for	Stages
Broiler Chicken	Commercial broiler production — batch-based grow-out from day-old chick to harvest.	Brooding (14 d) → Grower (14 d) → Finishing (14 d) → Harvest / Sale (1 d)
Layer Chicken	Commercial egg production — pullet rearing through peak lay and beyond.	Chick (56 d) → Grower / Developer (70 d) → Point of Lay (28 d) → Peak Production (126 d) → Late Lay & Depletion (224 d)
Broiler Breeder	Breeding flock producing hatching eggs for broiler hatchery.	Egg Production (280 d)
Meat Duck (Pekin/Muscovy)	Fast-growing ducks for meat production.	Brooding → Growing → Harvest / Slaughter
Layer Duck (Khaki Campbell/Indian Runner)	High-laying duck breeds producing 250–330 eggs/year.	Rearing → Laying Production → Depletion / Cull
Turkey (Broad-Breasted / Bronze)	Commercial turkey grow-out for festive/premium meat market.	Brooding & Starting → Growing & Finishing → Slaughter & Sale
Guinea Fowl (Helmeted)	Hardy native African bird for meat and eggs.	Brooding → Range Rearing → Harvest
Quail (Japanese / Coturnix)	Fast-maturing quail for eggs (6 weeks to lay) and meat.	Brooding → Laying Production → Deplete / Meat Sale
Indigenous / Village Chicken	Free-range indigenous chickens for local markets.	Brooding → Range Growing → Market / Sale
Goose (Meat & Foie Gras)	Embden or Toulouse geese for meat, fat, and feather production.	Brooding → Growing & Grazing → Finishing & Harvest
Ostrich	Commercial ostrich farming for premium meat, leather, and feathers.	Chick Rearing → Growing → Finishing & Slaughter
Pigeon (Squab Production)	Breeding pairs produce squabs for gourmet market.	Loft Set-Up & Pairing → Continuous Production

Livestock (9 templates)

Template	What it is for	Stages
Dairy Cattle	Cow milk production — herd management, lactation tracking, and milk sales.	Dry Period (60 d) → Calving (3 d) → Early Lactation (100 d) → Mid & Late Lactation (205 d)
Beef Cattle	Beef production — cow-calf, stocker, or feedlot operation tracking.	Receiving & Adaptation (21 d) → Growing / Stocker (90 d) → Feedlot Finishing (90 d)
Pig Production	Commercial pig production — from farrowing to finisher.	Gestation (114 d) → Farrowing & Suckling (28 d) → Weaner (42 d) → Grower (42 d) → Finisher (42 d)
Meat Goat (Boer / Kalahari Red)	Commercial meat goat production.	Mating → Gestation → Kidding → Growing to Market

Template	What it is for	Stages
Dairy Goat (Saanen / Toggenburg / Alpine)	Dairy goat production for fresh milk, cheese, and yoghurt.	Dry Period → Freshening / Kidding → Peak Lactation → Mid & Late Lactation
Meat Sheep (Dorper / Damara / Merino x)	Commercial mutton/lamb production.	Joining / Mating → Gestation → Lambing → Growing to Market
Rabbit (New Zealand White / Californian)	Intensive rabbit meat production.	Mating / Kindling → Nursing / Litter Rearing → Growing to Slaughter
Deer Farming (Venison)	Semi-intensive deer farming for premium venison meat, velvet antler (velvet for medicine), and trophy/breeding stock sales.	Rut & Breeding (45 d) → Pregnancy (233 d) → Fawning & Early Life (60 d) → Weaning & Venison Grow-Out (365 d) → Velvet Harvest / Slaughter (14 d)
Alpaca / Llama / Camel	Camelid production for premium fiber (alpaca), milk, meat, or pack animal services.	Mating & Pregnancy (345 d) → Birthing (60 d) → Cria Grow-Out & Weaning (180 d) → Annual Shearing & Fiber Harvest (7 d)

Aquaculture (6 templates)

Template	What it is for	Stages
Tilapia (Pond)	Pond-based tilapia grow-out — from fingerlings to harvest.	Pond Preparation (14 d) → Stocking (1 d) → Grow-out (150 d) → Harvest (2 d)
Catfish (Tank / Pond)	Catfish production in tanks or earthen ponds.	Grow-out (120 d)
Freshwater Prawn / Shrimp	Giant freshwater prawn production in earthen ponds.	Pond Preparation → Stocking & Nursery → Grow-Out
Rainbow Trout	Cold-water trout in raceways or tanks.	Fry Rearing → Fingerling to Grow-Out → Market Size
Common Carp	Hardy, fast-growing table fish ideal for semi-intensive earthen ponds.	Pond Preparation → Grow-Out
Aquaponics System	Recirculating system combining tilapia (or catfish) with hydroponic vegetables.	System Set-Up & Cycling → Dual Production

Crops and Grains (15 templates)

Template	What it is for	Stages
Maize (Field Crop)	Commercial maize production — land prep through harvest, drying, and storage.	Land Preparation (21 d) → Planting (7 d) → Emergence & Establishment (10 d) → Vegetative Growth (45 d) → Tasselling & Silking (14 d) → Grain Fill & Maturity (45 d) → Harvest (14 d) → Drying & Storage (21 d)
Rice (Paddy / Irrigated)	Irrigated paddy rice production.	Nursery / Seedbed → Land Prep & Transplanting → Tillering & Vegetative → Heading, Flowering & Grain Fill → Maturity & Harvest
Soybean	Soybean for oil, meal, and food.	Planting → Growing & Podding → Harvest
Sorghum (Grain)	Drought-tolerant grain sorghum for food, feed, and brewing.	Planting → Growing → Harvest
Sunflower	Sunflower for cooking oil and animal feed.	Planting → Vegetative & Flowering → Harvest
Groundnut (Arachis hypogaea)	Groundnut for oil, roasting, and peanut butter.	Land Preparation & Planting → Vegetative & Flowering → Pod Fill & Maturity
Cassava	Cassava for fresh market, flour, or starch.	Land Preparation & Planting → Vegetative Growth → Harvest

Template	What it is for	Stages
Sweet Potato	Sweet potato for fresh market and food processing.	Land Prep & Planting → Vine Spread & Root Initiation → Root Fill & Harvest
Wheat	Bread wheat production for grain.	Land Preparation & Planting → Vegetative & Tillering → Heading & Grain Fill → Harvest
Finger Millet (Rapoko)	Drought-tolerant, nutritious small grain.	Nursery & Transplanting → Vegetative Growth → Harvest & Threshing
Pearl Millet (Bulrush Millet)	Extremely drought-tolerant cereal for hot, arid areas where maize fails.	Planting → Vegetative & Tillering → Harvest
Irish Potato	Intensive potato production from certified seed.	Land Preparation & Planting → Vegetative & Hilling → Tuber Bulking → Harvest & Curing
Cowpea (Dried Beans)	Drought-tolerant legume for grain and fodder.	Planting → Vegetative & Flowering → Harvest
Sugarcane	Long-season crop (12–18 months) producing sucrose-rich cane for sugar mills, juice bars, or ethanol.	Land Preparation & Planting → Grand Growth Phase → Ripening & Harvest
Yam (White Yam)	Long-season tropical tuber (9–12 months).	Mound Preparation & Planting → Vine Growth & Staking → Tuber Bulking → Harvest

Horticulture and Vegetables (12 templates)

Template	What it is for	Stages
Tomato	Tomato production — nursery through harvest, grading, and market.	Nursery (28 d) → Land Prep & Transplanting (7 d) → Vegetative Growth (30 d) → Flowering & Fruit Set (21 d) → Harvest & Grading (45 d)
Onion	Onion production — from seed or sets through curing and market.	Nursery / Direct Sowing (42 d) → Transplanting & Bulbing (90 d) → Harvest & Curing (14 d)
Cabbage (Green / Red / Savoy)	Commercial cabbage for fresh market.	Nursery → Transplanting & Establishment → Vegetative Growth → Heading & Harvest
Bell Pepper / Chilli Pepper	Pepper for fresh market or drying.	Nursery → Transplanting → Vegetative & Flowering → Harvest
Cucumber (Outdoor / Greenhouse)	Cucumber for fresh market.	Seeding / Direct Sowing → Vegetative & Training → Harvest
Carrot	Deep-rooted root vegetable.	Deep Bed Preparation & Seeding → Growing & Thinning → Harvest & Grading
Kale & Spinach (Leafy Greens)	Fast-growing leafy greens for urban and peri-urban markets.	Nursery & Transplanting → Cut-and-Come-Again Production
Watermelon	High-value warm-season vine crop.	Nursery & Transplanting → Vine Development & Pollination → Fruit Fill & Maturation
Pumpkin & Butternut	Hardy cucurbit producing large, long-shelf-life fruit.	Planting & Establishment → Vine Growth & Pollination → Maturation & Harvest
Garlic	Long-season (6–8 months) high-value allium.	Clove Planting → Vegetative Growth → Harvest & Curing
Broccoli & Cauliflower	Cool-season brassicas for high-value fresh and export markets.	Nursery → Vegetative Growth → Head Development & Harvest
Eggplant (Brinjal)	Warm-season vegetable with long bearing period (4–6 months continuous harvest).	Nursery → Vegetative & First Flowering → Continuous Fruiting

Greenhouse (5 templates)

Template	What it is for	Stages
Cut Flower Rose	Commercial cut flower rose production under greenhouse.	Planting & Establishment → Continuous Production
Fresh Herbs (Basil, Mint, Coriander)	Fast-cycling greenhouse herb production for fresh market.	Seeding & Germination → Rapid Growth & Continuous Harvest
Hydroponic Lettuce & Microgreens	NFT or floating raft hydroponic lettuce and microgreens.	Seeding & Germination → Hydroponic Grow-Out
Greenhouse Bell Pepper (Capsicum)	Long-season greenhouse sweet pepper crop.	Nursery → Vegetative & Flower Initiation → Continuous Production
Strawberry (Greenhouse)	Everbearing or day-neutral strawberries in tabletop or substrate systems.	Planting & Establishment → Fruiting & Continuous Harvest

Orchard and Tree Fruit (9 templates)

Template	What it is for	Stages
Mango Orchard	Mango orchard management — from young tree through to full bearing (Year 5+).	Planting & Establishment → Young Bearing → Full Bearing
Avocado Orchard (Hass / Fuerte / Reed)	Avocado orchard for export and domestic markets.	Establishment → Annual Production Cycle
Citrus Orchard (Orange / Lemon / Mandarin)	Commercial citrus orchard — bearing from Year 3, full production Year 6+.	Orchard Establishment → Annual Production Cycle
Banana (Cavendish / FHIA / Local)	Banana for fresh market or processing.	Planting → Vegetative Growth → Shooting, Bunching & Harvest
Guava	Fast-bearing tropical fruit tree.	Establishment → Annual Production
Pawpaw (Papaya)	Fast-growing tropical fruit plant.	Nursery & Transplanting → Rapid Vegetative Growth → Fruiting & Harvest
Passion Fruit	Fast-bearing climbing vine.	Trellis & Establishment → Production
Macadamia	Long-life premium nut tree.	Establishment → Early Bearing → Full Production
Moringa (Drumstick Tree)	Fast-growing drought-tolerant multipurpose tree.	Planting & Establishment → Leaf & Pod Production

Apiary and Bees (2 templates)

Template	What it is for	Stages
Honey Bee (Langstroth Hive)	Commercial beekeeping with Langstroth hives.	Spring Build-Up → Honey Flow → Honey Harvest → Post-Harvest / Winter Preparation
Honey Bee (Top-Bar / Kenya Hive)	Low-cost top-bar beekeeping for smallholder farmers.	Hive Set-Up & Colonisation → Production Cycle

Mushroom (2 templates)

Template	What it is for	Stages
Oyster Mushroom (Pleurotus ostreatus)	Indoor / controlled oyster mushroom production on straw or sawdust substrate.	Substrate Preparation → Inoculation → Incubation / Colonisation → Fruiting Body Development → Rest & Subsequent Flushes
Button Mushroom (Agaricus bisporus)	White/brown button mushroom on composted wheat straw manure substrate.	Phase I Composting → Phase II Pasteurisation → Spawn Run & Casing → Fruiting & Harvest

Insects and Worms (7 templates)

Template	What it is for	Stages
Stingless Bee (Meliponiculture)	Stingless bee keeping for premium medicinal honey, cerumen, and pollination services.	Colony Acquisition & Setup (30 d) → Colony Management (365 d) → Honey Harvest (3 d) → Colony Division (90 d)
Black Soldier Fly (BSF)	BSF larvae convert organic waste into high-protein animal feed.	Breeding Colony Management (21 d) → Egg Incubation (4 d) → Larval Grow-Out & Waste Bioconversion (14 d) → Harvest & Processing (3 d)
Cricket Farming	Batch cricket production for human consumption (flour, whole roasted) or animal feed.	Egg Production & Laying (7 d) → Incubation (10 d) → Nymph & Juvenile Grow-Out (28 d) → Harvest & Processing (2 d)
Mealworm Farming	Mealworm beetle larvae are a high-protein feed additive for poultry, fish, and humans.	Beetle Colony (30 d) → Larval Grow-Out (70 d) → Pupation (21 d) → Harvest & Processing (2 d)
Silkworm (Sericulture)	Commercial silkworm rearing for raw silk thread.	Egg Incubation & Hatching (10 d) → Early Instars (I–III) — Young Age Rearing (12 d) → Late Instars (IV–V) — Late Age Rearing (12 d) → Mounting & Cocooning (5 d) → Cocoon Harvest & Reeling (3 d)
Vermiculture (Earthworms)	Continuous worm composting converts organic waste into premium vermicompost and worm protein biomass.	Bed Set-Up & Inoculation (14 d) → Continuous Feeding & Production (90 d) → Harvest (7 d)
Snail Farming (Heliciculture)	Giant African Land Snail or European snail farming for meat, slime (cosmetics), and shells.	Breeding & Egg Laying (60 d) → Egg Incubation & Hatching (28 d) → Nursery (60 d) → Grow-Out to Market Weight (150 d) → Harvest & Processing (7 d)

Aquatic Plants and Algae (2 templates)

Template	What it is for	Stages
Seaweed Farming	Marine seaweed cultivation on longlines or nets.	Site Selection & Infrastructure Setup (14 d) → Seeding (3 d) → Grow-Out (52 d) → Harvest & Drying (7 d)
Spirulina / Microalgae	Intensive raceway or tank cultivation of Spirulina for high-protein nutraceutical powder, animal feed additive, or aquaculture larval feed.	Culture Build-Up (14 d) → Continuous Production (365 d) → Harvesting, Filtration & Drying (2 d)

Forestry and Agroforestry (2 templates)

Template	What it is for	Stages
Timber Forestry	Long-rotation timber plantation management.	Site Preparation (60 d) → Planting (30 d) → Establishment (1095 d) → Thinning (730 d) → Final Harvest (180 d)
Agroforestry / Silvopastoral	Integrated land-use system combining trees with crops and/or livestock on the same block.	System Design & Planning (30 d) → Tree Establishment (365 d) → Crop & Livestock Integration (365 d) → Tree Harvest (60 d)

Agro-Processing (6 templates)

Template	What it is for	Stages
Maize Milling	Maize grain → mealie meal, bran, and grits.	Grain Receiving & QC (1 d) → Cleaning & Conditioning (1 d) → Milling & Grading (1 d) → Packaging & Dispatch (1 d)
Dairy Processing	Raw milk → pasteurised milk, yoghurt, cheese, or butter.	Milk Receiving & Testing (1 d) → Pasteurisation (1 d) → Yoghurt Production (1 d) → Packaging & Cold Store (1 d)
Honey Processing & Packing	Post-harvest honey processing: extraction, settling, filtration, bottling, and labelling.	Receive & Quality Inspection → Uncapping & Extraction → Settling, Filtering & Drying → Bottling & Labelling
Cassava Processing (Flour & Chips)	Fresh cassava roots converted to high-quality cassava flour (HQF), dried chips, or wet starch.	Receiving, Washing & Peeling → Grating, Pressing & Crumbling → Flash Drying or Sun Drying → Milling, Sieving & Packaging
Fruit Juice Processing	Small to mid-scale juice processing from mango, passion fruit, orange, guava, and other tropical fruits.	Receiving & Sorting → Extraction & Clarification → Pasteurisation & Hot-Fill
On-Farm Feed Mill	Small-scale on-farm or commercial feed mill producing compounded feeds (mash or pellets).	Raw Material Procurement & QC → Grinding, Weighing & Mixing → Bagging, Labelling & QC

Agricultural Services (5 templates)

Template	What it is for	Stages
Veterinary Clinic / Mobile Vet Services	Service-cycle template for a veterinary practice or mobile vet service.	Client Intake & Animal Triage → Diagnosis & Treatment → Follow-up & Records
Agricultural Consulting & Advisory	Consulting service cycle: initial diagnostic, farm plan development, on-site monitoring visits, and final evaluation report.	Initial Farm Diagnostic → Farm Plan Development → Implementation & Monitoring Visits → End-of-Season Evaluation
Agricultural Equipment Hire (Custom Hiring)	Custom hiring service for tractors, planters, harvesters, threshers, sprayers, and irrigation sets.	Booking & Pre-Season Scheduling → Field Operations → Scheduled Maintenance & Log
Farmer Training & Extension Services	Training cycle for farmer groups: needs assessment, curriculum design, classroom and field training, and follow-up evaluation.	Needs Assessment & Curriculum Design → Training Delivery → Follow-up & Impact Evaluation
Agricultural Laboratory Testing	Laboratory service cycle for soil fertility analysis, water quality testing, crop residue testing, and food safety (aflatoxin, heavy metals, pesticide residues).	Sample Intake & Chain of Custody → Laboratory Analysis & QC → Result Review & Report Issuance

Appendix B — Daily Record Fields by Category

These are the boxes on the **Daily Log** for each category before you change anything. Fields marked "Required" must be filled in to save a record. "Shown for" tells you which cycle types show the field; "all" means every cycle type of that category. A field marked "Calculated" fills itself in from other boxes. Your company can add, remove and change fields (Part 2).

Poultry and Birds

Field	Kind	Unit	Required	Normal range	Shown for
Eggs Collected	Number	eggs	Yes		Layer — from Day-Old, Layer — from Point-of-Lay, Layer — Continuing Flock, Breeder Flock, Quail Cycle, Duck Cycle
Cracked / Broken	Number	eggs			Layer — from Day-Old, Layer — from Point-of-Lay, Layer — Continuing Flock, Breeder Flock, Quail Cycle, Duck Cycle
Trays Collected — 30 eggs per tray	Number	trays			Layer — from Day-Old, Layer — from Point-of-Lay, Layer — Continuing Flock, Breeder Flock
Eggs Set for Incubation — Fertile eggs transferred to setter today	Number	eggs			Breeder Flock
Setter Temperature	Number	°C	Yes	min 37.2, max 37.8, target 37.5	Egg Incubation & Hatch
Setter Humidity	Number	%RH	Yes	min 55, max 65, target 60	Egg Incubation & Hatch
Hatcher Temperature	Number	°C		min 36.9, max 37.2, target 37	Egg Incubation & Hatch
Hatcher Humidity	Number	%RH		min 70, max 80, target 75	Egg Incubation & Hatch
Turner / Auto-Turn Options: Running OK; Manual turn done; Off — check immediately.	Choice				Egg Incubation & Hatch
Candle Rejects Removed — Infertile / dead eggs removed after candling	Number	eggs			Egg Incubation & Hatch
Chicks Hatched	Number	chicks			Egg Incubation & Hatch
Chicks Culled / Weak	Number	chicks			Egg Incubation & Hatch
Feed Consumed	Number	kg	Yes		Broiler Grow-Out, Layer — from Day-Old, Layer — from Point-of-Lay, Layer — Continuing Flock, Breeder Flock, Turkey Grow-Out, Duck Cycle, Quail Cycle

Field	Kind	Unit	Required	Normal range	Shown for
Type of Feed Options: Starter; Grower; Finisher; Layer mash; Breeder feed; Own mix; Other.	Choice				Broiler Grow-Out, Layer — from Day-Old, Layer — from Point-of-Lay, Layer — Continuing Flock, Breeder Flock, Turkey Grow-Out, Duck Cycle, Quail Cycle
Water Additive — Vitamins, electrolytes, acidifier, medication in the drinking water	Text				Broiler Grow-Out, Layer — from Day-Old, Layer — from Point-of-Lay, Layer — Continuing Flock, Breeder Flock, Turkey Grow-Out, Duck Cycle, Quail Cycle
Vaccine / Medicine Given — Name, route and dose — e.g. Newcastle Lasota, eye drop	Text				Broiler Grow-Out, Layer — from Day-Old, Layer — from Point-of-Lay, Layer — Continuing Flock, Breeder Flock, Turkey Grow-Out, Duck Cycle, Quail Cycle
Water Consumed	Number	L			Broiler Grow-Out, Layer — from Day-Old, Layer — from Point-of-Lay, Layer — Continuing Flock, Breeder Flock, Turkey Grow-Out, Duck Cycle, Quail Cycle
Mortality Count	Number	birds			Broiler Grow-Out, Layer — from Day-Old, Layer — from Point-of-Lay, Layer — Continuing Flock, Breeder Flock, Turkey Grow-Out, Duck Cycle, Quail Cycle
Mortality Reason Options: Unknown; Disease; Injury; Predator; Heat stress; Cold stress; Culled; Other.	Choice				Broiler Grow-Out, Layer — from Day-Old, Layer — from Point-of-Lay, Layer — Continuing Flock, Breeder Flock, Turkey Grow-Out, Duck Cycle, Quail Cycle
Avg Body Weight Sample — Sample 10–20 birds and enter average	Number	g			Broiler Grow-Out, Layer — from Day-Old, Turkey Grow-Out, Duck Cycle, Quail Cycle
Litter Condition Options: Dry & crumbly (excellent); Slightly damp (acceptable); Wet / caked (action needed); Very wet (critical).	Choice				Broiler Grow-Out, Turkey Grow-Out
House Temperature	Number	°C		min 18, max 32	Broiler Grow-Out, Layer — from Day-Old, Layer — from Point-of-Lay, Layer — Continuing Flock, Breeder Flock, Turkey Grow-Out, Duck Cycle, Quail Cycle
Live Bird Count — Current total — subtract mortalities daily	Number	birds			Broiler Grow-Out, Layer — from Day-Old, Layer — from Point-of-Lay, Layer — Continuing Flock, Breeder Flock, Turkey Grow-Out, Duck Cycle, Quail Cycle

Livestock

Field	Kind	Unit	Required	Normal range	Shown for
Morning Milk	Number	L	Yes		all
Afternoon Milk	Number	L			all
Evening Milk	Number	L			all
Total Milk Yield	Calculated	L			all
Animals Milked	Number	head			all
Concentrate Feed	Number	kg			all
Fodder / Roughage	Number	kg			all
Water Consumed	Number	L			all
Type of Feed Options: Pasture / grazing; Hay; Silage; Crop residue; Dairy meal; Grower ration; Finisher ration; Mineral lick; Own mix; Other.	Choice				all
Vaccine / Medicine / Dip — Product, dose and animals treated — e.g. FMD vaccine, 12 head	Text				all
Deaths / Culls	Number	head			all
Births / Calvings	Number	head			all
Health Status Options: All healthy; Monitor 1–2 animals; Sick animal(s) — see notes; Emergency — vet called.	Choice				all
Avg Body Weight Sample — Weigh 3–5 animals and average	Number	kg			all

Aquaculture

Field	Kind	Unit	Required	Normal range	Shown for
Feed Given	Number	kg	Yes		all
Water Temperature	Number	°C	Yes	min 25, max 32, target 28	all
Dissolved Oxygen	Number	mg/L	Yes	min 5, max 10, target 7	all
pH Level	Number	pH		min 6.5, max 8.5, target 7.5	all
Ammonia (NH_3)	Number	mg/L		max 0.02	all
Turbidity / Secchi	Number	cm			all
Type of Feed Options: Fingerling starter; Grower pellet; Finisher pellet; Own mix; Natural (pond fertiliser); Other.	Choice				all
Treatment / Pond Input — Lime, salt, fertiliser, medication — product and amount	Text				all

Field	Kind	Unit	Required	Normal range	Shown for
Mortality Count	Number	fish			all
Water Change	Number	%			all
Avg Weight Sample — Weigh 10–20 fish from a single pond/tank	Number	g			all
Feeding Response Options: Vigorous — all food consumed; Good — consumed within 30min; Poor — leftover feed; Very poor — not feeding.	Choice				all

Crops and Grains

Field	Kind	Unit	Required	Normal range	Shown for
Irrigation Applied	Number	mm			all
Fertilizer Applied	Number	kg/ha			all
Pest Pressure Options: None observed; Low — monitor; Moderate — spray threshold; High — immediate action.	Choice				all
Disease Pressure Options: None observed; Low — monitor; Moderate — treat; High — severe.	Choice				all
Growth Stage Options: Germination; Seedling; Vegetative; Flowering; Grain fill; Maturity; Harvest ready.	Choice				all
Harvest Collected	Number	kg			all
Spray Applied — Product name + rate	Text				all
Fertiliser Type — Compound D, urea, CAN, manure…	Text				all
Weeding / Cultivation Options: No; Hand weeding; Herbicide; Cultivator.	Choice				all
Rainfall	Number	mm			all

Horticulture and Vegetables

Field	Kind	Unit	Required	Normal range	Shown for
Harvest Weight	Number	kg	Yes		all
Units Harvested	Number	units			all
Grade A	Number	kg			all
Grade B / Seconds	Number	kg			all
Rejects / Waste	Number	kg			all
Irrigation Applied	Number	mm			all
Spray Applied — Product, rate and target (fungicide / insecticide)	Text				all

Field	Kind	Unit	Required	Normal range	Shown for
Fertiliser Applied — Type and amount — e.g. CAN 50 kg	Text				all
Pest / Disease Flag Options: None; Aphids; Spider mite; Whitefly; Botrytis; Downy mildew; Other — see notes.	Choice				all
Plant Health Options: Excellent; Good; Fair — monitor; Concern — action needed.	Choice				all

Greenhouse

Field	Kind	Unit	Required	Normal range	Shown for
Nutrient Solution EC	Number	mS/cm	Yes	min 1.2, max 2.5, target 1.8	all
Nutrient Solution pH	Number	pH	Yes	min 5.5, max 6.5, target 6	all
Air Temperature	Number	°C		min 18, max 28	all
Humidity	Number	%		min 60, max 80	all
Nutrient Top-Up	Number	L			all
Harvest Weight	Number	kg			all
Plants Harvested	Number	plants			all
Plant Health Options: Excellent; Good; Yellowing — check nutrients; Wilting — check roots; Disease spotted.	Choice				all
Pest Observation Options: None; Aphids; Spider mite; Fungus gnats; Thrips; Other.	Choice				all

Orchard and Tree Fruit

Field	Kind	Unit	Required	Normal range	Shown for
Irrigation Duration	Number	hours			all
Irrigation Amount	Number	mm			all
Spray Applied — Product, concentration, and target (fungicide / insecticide / foliar)	Text				all
Pest / Disease Scouting Options: None detected; Low — continue monitoring; Moderate — schedule spray; High — immediate action.	Choice				all
Fruit Thinned — Hand-thinning count to improve sizing	Number	fruits			all
Harvest Collected	Number	kg			all
Grade A Fruit	Number	kg			all

Field	Kind	Unit	Required	Normal range	Shown for
Rejects / Drops	Number	kg			all
Tree Health Status Options: All healthy; Minor yellowing — monitor; Suspected disease — isolate; Confirmed disease — action.	Choice				all
Rainfall	Number	mm			all

Apiary and Bees

Field	Kind	Unit	Required	Normal range	Shown for
Hives Inspected	Number	hives			all
General Hive Status Options: All healthy & queenright; 1–2 hives weak — monitor; Queenless hive detected; Swarming activity; Disease signs (varroa/EFB/AFB).	Choice				all
Honey Super Weight — Total weight of honey supers across all hives	Number	kg			all
Honey Harvested	Number	kg			all
Varroa Mite Count	Number	mites/100 bees		max 3	all
Treatment Applied — Product name + dose (oxalic, formic, etc.)	Text				all
Syrup Fed	Number	L			all

Mushroom

Field	Kind	Unit	Required	Normal range	Shown for
Air Temperature	Number	°C		min 16, max 24, target 20	all
Humidity	Number	%		min 80, max 95, target 90	all
CO_2 Level	Number	ppm		max 1000	all
Pinning Count	Number	fruiting bodies			all
Harvest Weight	Number	kg			all
Substrate Moisture Options: Optimal (60–70%); Too dry — mist; Too wet — air out; Contamination visible.	Choice				all
Contamination Options: None; Slight — isolated; Moderate — quarantine block; Severe — dispose.	Choice				all
Misting Done Options: Yes; No; Partial.	Choice				all

Insects and Worms

Field	Kind	Unit	Required	Normal range	Shown for
Feed / Substrate Added	Number	kg	Yes		all
Type of Feed Options: Kitchen waste; Crop residue; Manure; Commercial feed; Bran / grain; Other.	Choice				all
Temperature	Number	°C		min 24, max 32	all
Humidity	Number	%		min 60, max 80	all
Substrate Moisture Options: Optimal; Too dry — mist; Too wet — add dry matter.	Choice				all
Harvest Weight	Number	kg			all
Mortality / Pests Options: None; Some die-off; Mites / flies present; Heavy loss — see notes.	Choice				all

Aquatic Plants and Algae

Field	Kind	Unit	Required	Normal range	Shown for
Water Temperature	Number	°C	Yes		all
pH Level	Number	pH			all
Salinity / EC	Number	ppt / mS			all
Nutrient / Fertiliser Added — Product and amount	Text				all
Culture Density	Number	g/L			all
Harvest Weight	Number	kg			all
Culture Health Options: Excellent; Good; Fair — monitor; Contaminated / crashing.	Choice				all

Forestry and Agroforestry

Field	Kind	Unit	Required	Normal range	Shown for
Activity Today Options: Planting; Weeding; Pruning / thinning; Fire-break maintenance; Pest scouting; Watering; Harvest / felling; Other.	Choice				all
Trees Planted	Number	trees			all
Workers on Site	Number	people			all
Survival Rate (sample)	Number	%			all
Stand Health Options: All healthy; Minor pest / disease; Fire damage; Drought stress; Serious loss — see notes.	Choice				all

Field	Kind	Unit	Required	Normal range	Shown for
Rainfall	Number	mm			all

Agro-Processing

Field	Kind	Unit	Required	Normal range	Shown for
Raw Input Received	Number	kg	Yes		all
Finished Output	Number	kg	Yes		all
Waste / Loss	Number	kg			all
Processing Yield — Auto-calculated: output ÷ input × 100	Calculated	%			all
Batches Processed	Number	batches			all
Downtime	Number	hours			all
Quality Check Result Options: Pass — all within spec; Minor deviation — acceptable; Fail — hold batch; Critical failure — destroy.	Choice				all

Agricultural Services

Field	Kind	Unit	Required	Normal range	Shown for
Clients Served	Number	clients			all
Hours Worked	Number	hours			all
Revenue Collected	Number	currency			all
Pending Invoices	Number	invoices			all
Service Type Options: Consultation; Field visit; Training; Lab test; Advisory call; Other.	Choice				all

Categories without a specific form

If a template belongs to a category that has no form of its own, the Daily Log offers **Activity Today** (text) and **Workers on Site** (number). You can add your own fields (Part 2).

Appendix C — Cycle Types by Category

When you start a cycle you choose a cycle type. It decides which daily fields show and gives the cycle a sensible expected length. Typical days is the length the app suggests; you can change dates.

Poultry and Birds

Cycle type	What it is	Typical days
Broiler Grow-Out	Day-old chicks → live weight / slaughter. Typically 35–45 days.	42
Layer — from Day-Old	Day-old chicks → pullets → full lay. Includes brooding & growing phases.	500
Layer — from Point-of-Lay	Start with 18-week+ pullets ready to lay.	380
Layer — Continuing Flock	Already-laying flock, tracking ongoing production season.	90
Egg Incubation & Hatch	Set fertile eggs → candle → lock-down → hatch → chick grading.	22
Breeder Flock	Roosters + hens managed for fertile egg production.	365
Turkey Grow-Out	Poults → market weight. Typically 16–20 weeks.	120
Duck Cycle	Ducklings → meat or layer production.	60
Quail Cycle	Quail chicks → eggs or meat.	90

Livestock

Cycle type	What it is	Typical days
Dairy Production Season	Track lactation, milk yield, breeding and dry-off for a dairy herd.	305
Beef Grow-Out	Weaners / stockers → slaughter weight.	180
Pig Grow-Out	Weaners → market weight. Typically 16–20 weeks post-weaning.	120
Sow Farrowing Cycle	Pregnancy → farrowing → weaning for a sow or group of sows.	90
Goat Production Season	Dairy or meat goats — kidding, milking, or grow-out.	180
Sheep Season	Lambing or meat lamb grow-out.	120
Rabbit Batch	Kits at weaning → market weight. Typically 70–90 days.	80

Aquaculture

Cycle type	What it is	Typical days
Pond Grow-Out	Fingerlings stocked into pond → harvest weight.	180
Cage Culture	Fish in floating cages in a lake or dam.	150
Tank / RAS System	Recirculating aquaculture system — controlled indoor environment.	120
Shrimp Pond Cycle	Post-larvae stocking → harvest. Typically 90–120 days.	100
Aquaponics Cycle	Fish + plants in a closed-loop system.	120

Cycle type	What it is	Typical days
Hatchery / Nursery Cycle	Broodstock conditioning → spawning → larvae rearing → fingerlings.	45

Crops and Grains

Cycle type	What it is	Typical days
Rain-Fed Season	Single rainy-season crop — maize, sorghum, groundnuts etc.	120
Irrigated Season	Irrigated crop — can span any calendar period.	90
Nursery / Seedbed	Seed germination and seedling raising before transplanting.	30
Ratoon Crop	Second harvest from the same root system (sugarcane, banana).	180

Horticulture and Vegetables

Cycle type	What it is	Typical days
Transplant Cycle	Seedling transplant → harvest. For tomato, cabbage, kale, pepper.	90
Direct-Sown Crop	Seed direct in field — carrot, beetroot, onion, watermelon.	75
Perennial Season	Track a growing season on a perennial vegetable (chilli, eggplant).	120

Greenhouse

Cycle type	What it is	Typical days
Hydroponic Cycle	NFT, DWC, or drip lettuce / herbs / spinach cycle.	35
Greenhouse Tomato	Transplant to first pick to end-of-season for greenhouse tomato.	180
Cut Flower Production	Planting to first cut and repeat cycles for roses, carnations.	90
Strawberry Cycle	Transplant to first harvest and peak production window.	75

Orchard and Tree Fruit

Cycle type	What it is	Typical days
Annual Production Season	Track flowering → fruit set → harvest → post-harvest for one year.	365
New Orchard Planting	Land prep → planting → establishment phase for new trees.	180
Harvest Window	Focus on the active harvest period only.	45

Apiary and Bees

Cycle type	What it is	Typical days
Honey Production Season	Colony build-up → main flow → extraction → post-harvest assessment.	120
Colony Build-Up	Package or nuc → full colony establishment.	60
Queen Rearing Cycle	Cell grafting → capping → emergence → mating → laying.	30

Mushroom

Cycle type	What it is	Typical days
Spawn Block Cycle	Inoculation → colonisation → pinning → fruiting → end-of-life.	60
Bag Spawn Cycle	Substrate bags inoculated and cycled through fruiting.	45

Agro-Processing

Cycle type	What it is	Typical days
Processing Batch	A defined batch of raw material through the processing line.	7
Monthly Operation	Track one calendar month of processing activity.	30

Agricultural Services

Cycle type	What it is	Typical days
Service Contract	A defined service engagement — consulting, training, vet rounds.	30
Equipment Hire Period	Track utilisation and returns for hired equipment.	14

Appendix D — Starter Care Guides at a Glance

All 94 built-in templates have a starter care guide (1011 items in total): a list of feeding programmes, vaccinations, medicines, sprays, fertiliser, weighing, checks and tasks, each with the day it is due counted from the start of the cycle (day 0). They describe typical practice only. **Always confirm products and doses with your vet, agronomist or extension officer and the product label**, then save your own version (Part 2).

Poultry and Birds

Template	Items	Covers
Broiler Chicken	17	Check 4, Vaccination 4, Feed 3, Task 2, Water 2, Medicine 1, Weigh / sample 1
Layer Chicken	20	Vaccination 8, Feed 5, Medicine 3, Task 2, Water 1, Weigh / sample 1
Broiler Breeder	8	Feed 2, Water 1, Vaccination 1, Medicine 1, Task 1, Check 1, Weigh / sample 1
Meat Duck (Pekin/Muscovy)	9	Task 3, Feed 3, Water 1, Vaccination 1, Weigh / sample 1
Layer Duck (Khaki Campbell/Indian Runner)	11	Feed 4, Task 2, Medicine 2, Water 1, Vaccination 1, Weigh / sample 1
Turkey (Broad-Breasted / Bronze)	13	Task 3, Feed 3, Vaccination 3, Medicine 2, Water 1, Weigh / sample 1
Guinea Fowl (Helmeted)	11	Task 3, Feed 2, Vaccination 2, Medicine 2, Water 1, Weigh / sample 1
Quail (Japanese / Coturnix)	10	Task 4, Feed 3, Water 1, Medicine 1, Weigh / sample 1
Indigenous / Village Chicken	14	Vaccination 5, Task 2, Feed 2, Medicine 2, Water 1, Spray 1, Weigh / sample 1
Goose (Meat & Foie Gras)	8	Feed 3, Task 2, Water 1, Medicine 1, Weigh / sample 1
Ostrich	10	Feed 3, Task 2, Vaccination 2, Water 1, Medicine 1, Weigh / sample 1
Pigeon (Squab Production)	7	Task 3, Feed 1, Water 1, Vaccination 1, Medicine 1

Livestock

Template	Items	Covers
Dairy Cattle	15	Feed 4, Task 4, Medicine 2, Water 1, Vaccination 1, Check 1, Spray 1, Weigh / sample 1
Beef Cattle	11	Feed 4, Medicine 2, Task 1, Vaccination 1, Water 1, Spray 1, Weigh / sample 1
Pig Production	17	Feed 7, Task 5, Medicine 2, Water 1, Vaccination 1, Weigh / sample 1
Meat Goat (Boer / Kalahari Red)	15	Feed 4, Vaccination 3, Task 3, Water 1, Medicine 1, Check 1, Spray 1, Weigh / sample 1
Dairy Goat (Saanen / Toggenburg / Alpine)	14	Task 4, Feed 3, Medicine 2, Water 1, Vaccination 1, Check 1, Spray 1, Weigh / sample 1
Meat Sheep (Dorper / Damara / Merino x)	14	Feed 4, Vaccination 3, Task 3, Water 1, Check 1, Spray 1, Weigh / sample 1

Template	Items	Covers
Rabbit (New Zealand White / Californian)	16	Task 8, Feed 3, Water 1, Medicine 1, Vaccination 1, Check 1, Weigh / sample 1
Deer Farming (Venison)	11	Feed 3, Task 3, Water 1, Vaccination 1, Medicine 1, Check 1, Weigh / sample 1
Alpaca / Llama / Camel	14	Task 4, Feed 3, Vaccination 3, Water 1, Check 1, Medicine 1, Weigh / sample 1

Aquaculture

Template	Items	Covers
Tilapia (Pond)	12	Task 5, Feed 3, Fertiliser 2, Weigh / sample 1, Check 1
Catfish (Tank / Pond)	10	Task 5, Feed 3, Weigh / sample 1, Check 1
Freshwater Prawn / Shrimp	11	Task 5, Fertiliser 2, Feed 2, Check 1, Weigh / sample 1
Rainbow Trout	8	Feed 3, Task 3, Check 1, Weigh / sample 1
Common Carp	10	Task 4, Fertiliser 3, Feed 1, Weigh / sample 1, Check 1
Aquaponics System	10	Task 5, Check 2, Feed 1, Fertiliser 1, Weigh / sample 1

Crops and Grains

Template	Items	Covers
Maize (Field Crop)	12	Task 6, Fertiliser 3, Spray 2, Check 1
Rice (Paddy / Irrigated)	12	Task 7, Fertiliser 3, Water 1, Check 1
Soybean	9	Task 6, Fertiliser 1, Check 1, Spray 1
Sorghum (Grain)	10	Task 6, Fertiliser 2, Check 1, Spray 1
Sunflower	9	Task 6, Fertiliser 2, Check 1
Groundnut (Arachis hypogaea)	11	Task 6, Spray 2, Fertiliser 2, Check 1
Cassava	8	Task 6, Fertiliser 1, Check 1
Sweet Potato	9	Task 7, Fertiliser 1, Check 1
Wheat	13	Task 6, Fertiliser 3, Spray 2, Water 1, Check 1
Finger Millet (Rapoko)	11	Task 8, Fertiliser 2, Check 1
Pearl Millet (Bulrush Millet)	9	Task 6, Fertiliser 2, Check 1
Irish Potato	11	Task 6, Fertiliser 2, Water 1, Check 1, Spray 1
Cowpea (Dried Beans)	8	Task 5, Fertiliser 1, Check 1, Spray 1
Sugarcane	11	Task 6, Fertiliser 3, Water 1, Check 1
Yam (White Yam)	11	Task 9, Fertiliser 1, Check 1

Horticulture and Vegetables

Template	Items	Covers
Tomato	11	Task 4, Spray 3, Fertiliser 2, Check 1, Water 1
Onion	11	Task 6, Fertiliser 2, Spray 2, Check 1

Template	Items	Covers
Cabbage (Green / Red / Savoy)	10	Task 4, Fertiliser 2, Spray 2, Check 1, Water 1
Bell Pepper / Chilli Pepper	14	Fertiliser 5, Task 4, Spray 3, Water 1, Check 1
Cucumber (Outdoor / Greenhouse)	10	Task 4, Fertiliser 3, Water 1, Check 1, Spray 1
Carrot	12	Task 7, Fertiliser 2, Water 1, Check 1, Spray 1
Kale & Spinach (Leafy Greens)	10	Fertiliser 4, Task 3, Water 1, Check 1, Spray 1
Watermelon	11	Task 5, Fertiliser 3, Water 1, Check 1, Spray 1
Pumpkin & Butternut	10	Task 6, Fertiliser 2, Check 1, Spray 1
Garlic	14	Task 8, Fertiliser 3, Water 1, Check 1, Spray 1
Broccoli & Cauliflower	11	Task 4, Fertiliser 3, Spray 2, Check 1, Water 1
Eggplant (Brinjal)	13	Fertiliser 5, Task 4, Spray 2, Water 1, Check 1

Greenhouse

Template	Items	Covers
Cut Flower Rose	7	Task 4, Water 1, Check 1, Spray 1
Fresh Herbs (Basil, Mint, Coriander)	6	Task 4, Water 1, Check 1
Hydroponic Lettuce & Microgreens	8	Task 6, Water 1, Check 1
Greenhouse Bell Pepper (Capsicum)	8	Task 4, Spray 2, Water 1, Check 1
Strawberry (Greenhouse)	7	Task 4, Water 1, Check 1, Spray 1

Orchard and Tree Fruit

Template	Items	Covers
Mango Orchard	22	Task 11, Fertiliser 5, Check 3, Water 2, Spray 1
Avocado Orchard (Hass / Fuerte / Reed)	23	Task 10, Fertiliser 5, Spray 3, Check 3, Water 2
Citrus Orchard (Orange / Lemon / Mandarin)	23	Task 11, Fertiliser 5, Check 3, Spray 2, Water 2
Banana (Cavendish / FHIA / Local)	15	Task 6, Fertiliser 6, Check 2, Water 1
Guava	22	Task 11, Fertiliser 5, Check 3, Water 2, Spray 1
Pawpaw (Papaya)	14	Fertiliser 7, Task 4, Water 1, Check 1, Spray 1
Passion Fruit	22	Task 11, Fertiliser 5, Check 3, Water 2, Spray 1
Macadamia	22	Task 11, Fertiliser 5, Check 3, Water 2, Spray 1
Moringa (Drumstick Tree)	8	Task 5, Fertiliser 1, Water 1, Check 1

Apiary and Bees

Template	Items	Covers
Honey Bee (Langstroth Hive)	9	Task 4, Check 3, Feed 1, Medicine 1
Honey Bee (Top-Bar / Kenya Hive)	6	Check 4, Task 2

Mushroom

Template	Items	Covers
Oyster Mushroom (Pleurotus ostreatus)	7	Task 5, Check 2
Button Mushroom (Agaricus bisporus)	9	Task 6, Check 3

Insects and Worms

Template	Items	Covers
Stingless Bee (Meliponiculture)	7	Task 3, Check 2, Feed 1, Weigh / sample 1
Black Soldier Fly (BSF)	8	Task 5, Check 2, Feed 1
Cricket Farming	8	Task 5, Feed 1, Water 1, Weigh / sample 1
Mealworm Farming	7	Task 5, Feed 1, Check 1
Silkworm (Sericulture)	9	Task 5, Check 2, Feed 2
Vermiculture (Earthworms)	5	Task 3, Check 1, Feed 1
Snail Farming (Heliciculture)	8	Task 4, Feed 3, Check 1

Aquatic Plants and Algae

Template	Items	Covers
Seaweed Farming	6	Task 4, Check 1, Weigh / sample 1
Spirulina / Microalgae	6	Task 3, Check 2, Fertiliser 1

Forestry and Agroforestry

Template	Items	Covers
Timber Forestry	11	Task 10, Check 1
Agroforestry / Silvopastoral	8	Task 8

Agro-Processing

Template	Items	Covers
Maize Milling	8	Task 7, Check 1
Dairy Processing	8	Task 6, Check 2
Honey Processing & Packing	6	Task 5, Check 1
Cassava Processing (Flour & Chips)	6	Task 5, Check 1
Fruit Juice Processing	7	Task 6, Check 1
On-Farm Feed Mill	7	Task 6, Check 1

Agricultural Services

Template	Items	Covers
Veterinary Clinic / Mobile Vet Services	6	Task 5, Check 1
Agricultural Consulting & Advisory	6	Task 6
Agricultural Equipment Hire (Custom Hiring)	6	Task 6
Farmer Training & Extension Services	7	Task 7
Agricultural Laboratory Testing	6	Task 6

Appendix E — Roles and Permissions

Every member of a company has one **role**. The role decides which modules they can open and what they can do there. An organisation administrator (the owner/director) can also give one person a different set of permissions from their role, in **Team & Permissions** (Part 1). The four actions are **View** (open and read), **Create** (add new records), **Edit** (change existing records) and **Delete** (remove records).

In the lists below, modules are grouped by what the role may do in them.

Farm, cooperative and business accounts

Role	Who it is for
Director / Owner	Full access, manages the team
Production Manager	Runs production, inventory and procurement
Finance Manager	Finance, sales, credit profile, reports
Sales Manager	Sales, marketplace, trade documents
Supervisor	Day-to-day production records
Farmhand	Logs daily records
Veterinary Officer	Animal health and biosecurity
Driver	Mobile app, deliveries

Director / Owner

Full access, manages the team.

- **Full access (view, add, change, delete):** Dashboard, Smart AI Engine, Daily Planner, Broiler Poultry, Village Chicken, Piggery, Fish Farming, Duck Management, Goats & Sheep, Horticulture, Production Records, Feed & Inventory, Sales & Customers, Financial Management, Credit Profile, Human Resources, Procurement, Biosecurity & Vet, Weather & Fields, Smart Devices & IoT, Reports & BI, Trade & Export, Marketplace, Assets & Infra, Mobile App, Settings, Team & Permissions

Production Manager

Runs production, inventory and procurement.

- **View, add and change (no delete):** Daily Planner, Broiler Poultry, Village Chicken, Piggery, Fish Farming, Duck Management, Goats & Sheep, Horticulture, Production Records, Feed & Inventory, Procurement, Biosecurity & Vet
- **View only:** Dashboard, Smart AI Engine, Reports & BI, Settings, Weather & Fields, Smart Devices & IoT, Marketplace

Finance Manager

Finance, sales, credit profile, reports.

- **View, add and change (no delete):** Financial Management, Sales & Customers, Feed & Inventory, Procurement, Credit Profile

- **View only:** Dashboard, Daily Planner, Reports & BI, Trade & Export, Settings, Marketplace

Sales Manager

Sales, marketplace, trade documents.

- **View, add and change (no delete):** Sales & Customers, Trade & Export, Marketplace
- **View only:** Dashboard, Daily Planner, Feed & Inventory, Reports & BI, Settings, Weather & Fields

Supervisor

Day-to-day production records.

- **View, add and change (no delete):** Broiler Poultry, Village Chicken, Piggery, Fish Farming, Duck Management, Goats & Sheep, Horticulture, Production Records, Feed & Inventory, Biosecurity & Vet
- **View only:** Dashboard, Daily Planner, Procurement, Settings, Weather & Fields, Smart Devices & IoT

Farmhand

Logs daily records.

- **View and add only:** Broiler Poultry, Village Chicken, Piggery, Fish Farming, Duck Management, Goats & Sheep, Horticulture, Production Records
- **View only:** Dashboard, Daily Planner, Mobile App, Weather & Fields

Veterinary Officer

Animal health and biosecurity.

- **View, add and change (no delete):** Biosecurity & Vet
- **View and add only:** Broiler Poultry, Village Chicken, Piggery, Fish Farming, Duck Management, Goats & Sheep, Horticulture, Production Records
- **View only:** Dashboard, Daily Planner, Mobile App

Driver

Mobile app, deliveries.

- **View only:** Dashboard, Daily Planner, Mobile App

Modules in this account type: Dashboard, Smart AI Engine, Daily Planner, Broiler Poultry, Village Chicken, Piggery, Fish Farming, Duck Management, Goats & Sheep, Horticulture, Production Records, Feed & Inventory, Sales & Customers, Financial Management, Credit Profile, Human Resources, Procurement, Biosecurity & Vet, Weather & Fields, Smart Devices & IoT, Reports & BI, Trade & Export, Marketplace, Assets & Infra, Mobile App, Settings, Team & Permissions.

Government accounts

Role	Who it is for
Administrator	Manages the team, branches and advisories; sees everything
Dashboard viewer	Read-only district & national dashboards
Extension supervisor	Oversees officers in the branch, issues advisories
Extension officer	Caseload of farms, visits, direct advice

Administrator

Manages the team, branches and advisories; sees everything.

- **Full access (view, add, change, delete):** District & national dashboards, District registry, Advisories, Extension caseload, Visits & follow-ups, Programmes, Participant enrolment, Support ledger, M&E indicators, Programme notices, Team & Permissions, Organisation settings

Dashboard viewer

Read-only district & national dashboards.

- **View only:** District & national dashboards, District registry, Programmes, Participant enrolment, Support ledger, M&E indicators

Extension supervisor

Oversees officers in the branch, issues advisories.

- **Full access (view, add, change, delete):** Extension caseload, Visits & follow-ups
- **View, add and change (no delete):** Programmes, Participant enrolment, Support ledger, M&E indicators, Programme notices
- **View and add only:** Advisories
- **View only:** District & national dashboards, District registry, Organisation settings

Extension officer

Caseload of farms, visits, direct advice.

- **View, add and change (no delete):** Extension caseload, Visits & follow-ups
- **View and add only:** Advisories
- **View only:** District & national dashboards, District registry, Programmes, Participant enrolment, Support ledger

Modules in this account type: District & national dashboards, District registry, Advisories, Extension caseload, Visits & follow-ups, Programmes, Participant enrolment, Support ledger, M&E indicators, Programme notices, Team & Permissions, Organisation settings.

Programme partner (NGO / donor) accounts

Role	Who it is for
Administrator	Manages team, branches and programmes
Programme manager	Runs programmes: enrolment, support, notices
M&E officer	Records indicator readings and views results
Observer (donor / auditor)	Read-only access to programmes and dashboards

Administrator

Manages team, branches and programmes.

- **Full access (view, add, change, delete):** Programmes, Farm enrolment, Support ledger, M&E indicators, Programme notices, District & national dashboards, District registry, Advisories, Team & Permissions, Organisation settings

Programme manager

Runs programmes: enrolment, support, notices.

- **Full access (view, add, change, delete):** Programmes, Farm enrolment, Support ledger, M&E indicators, Programme notices
- **View and add only:** Advisories
- **View only:** District & national dashboards, District registry, Organisation settings

M&E officer

Records indicator readings and views results.

- **View, add and change (no delete):** M&E indicators
- **View only:** Programmes, Farm enrolment, Support ledger, District & national dashboards, District registry, Organisation settings

Observer (donor / auditor)

Read-only access to programmes and dashboards.

- **View only:** Programmes, Farm enrolment, Support ledger, M&E indicators, Programme notices, District & national dashboards, District registry

Modules in this account type: Programmes, Farm enrolment, Support ledger, M&E indicators, Programme notices, District & national dashboards, District registry, Advisories, Team & Permissions, Organisation settings.

Notes

- The owner (organisation administrator) always has full access to every module of the company, whatever their role is called.
- A person with a custom permission set uses that set instead of their role's default.

- Government, extension and partner staff only ever see de-identified information about farms that have chosen to share their data (Part 1, Data-sharing consent).

Appendix F — Current Limits and Preview Features

This appendix lists, in one place, what the platform does not do yet, which screens show sample or simulated information, and behaviours that can surprise you. It is based on how the platform was reviewed in October 2026. Features marked here may change; check with your administrator before relying on anything listed.

Screens that show sample or simulated information

These screens exist so you can see how a feature will look. They are not live data about your farm.

Screen	What you see
The public landing page and the individual (buyer) dashboard	A built-in catalogue of sample listings (27 on the public page). They show how the marketplace will look.
Smart Vision	Random sample answers. It does not analyse real pictures or video, and the camera pictures are placeholders.
Smart Devices, Water Management, Aquaculture, Poultry Houses, Energy and Soil Depth	Sample devices. Readings come from buttons such as **Simulate Reading** or **Refresh**; they are not sent by real sensors.
Device Gateway and Farm Gateway	Demonstration screens. They do not receive data from hardware.
Energy	View-only sample figures. You cannot add arrays, batteries or loads.
Activity Log	Sample entries only. Nothing on the platform writes real entries to it yet.
First open of several pages	Sample records are put in place the first time you open Animal Health, Staff and Labour, Procurement, Requisitions, Crop Rotation, Sustainability and the Loans tab of Financial AI, so you can see how they work. Delete them and enter your own.
Reports: Profitability tab	Four sample production expenses (total ZMW 40,050) are placed on the device the first time the tab opens if there are cycles and no expenses. They cannot be edited or deleted.
AgriFood Market, AgriSupply and AgriServices (farm side)	Sample listings plus any listing you register on this device. A listing you register there stays on this device only.
Agro Dealers, Equipment Hire and Vet Services (farm side)	A live list of providers from the platform when it can be reached, otherwise sample providers (a yellow bar says so).

Things that are not available yet

Account

- There is no working **Forgot password?** and no screen to change your password, name, phone or photo. Ask your company administrator or AGRINUXES support.
- The farm workspace has no **Sign Out** button. Vendor workspaces and buyer dashboards have one. On a shared computer use a private browsing window.
- Plans, free-trial counters and payment screens are not connected to the screens you use today.
- The sign-in box asks for an email address; phone-only sign-in may be refused by the browser.

Buyers and marketplaces

- On the individual dashboard the **Order** and **Enquire** buttons do not open a request form yet. Contact the seller by phone.
- Individual accounts cannot track, cancel or review requests, and cannot edit their profile. Favourites are kept in the page only and are lost when you refresh.
- Farmers have no screen to write a review, and the farm workspace has no list of past orders or bookings with vendors.
- Vendors are not sent an email, text or in-app message when a buyer sends a request. Check your tabs regularly.
- Farm-side directory cards for live providers may show no services, reviews or certificates.
- There is no farmer-facing booking page for transport or AgriServices providers. Record such requests in your own workspace as jobs.

Vendor workspaces

- Orders are recorded by your staff after a buyer makes contact. There is no automatic intake of marketplace orders into your **Orders** tab.
- Saved orders cannot be edited (cancel and record again). Listings have no photo upload, and there are no quality-grade or harvest-date fields for food listings (use the description).
- Invoice **Send** changes the status only. It does not send an email or text.
- On an AgriFood Seller workspace, the **Catalogue & prices** and **Stock** quick-action buttons on the Overview may not take you to a tab.

Production

- There is no button that creates a production program from scratch, so **Transfer Output** is only available on cycles that already belong to a program.
- Insects and worms, aquatic plants and forestry enterprises have no event types on the **Events** tab (the Daily Log and Care Plan still work).
- A **Stocking** event does not post its fingerling cost to Finance, because its Total Cost box is not calculated. Record the cost as a **Purchase** event or in Finance.
- A **Fertilisation** event's Total Applied box is not calculated.
- Entering **Hatching Eggs** in an egg collection does not start an incubation cycle for you.
- Editing or deleting an event does not change the Finance or Inventory entry it created. Correct those pages as well.

Business pages

- Processing batches are created as **In Progress**, so the stock-out of inputs that belongs to the move from Planned to In Progress does not happen from the screen. Take inputs out of Inventory yourself.
- The Finance cost posted when a processing batch completes adds labour and overhead on top of a total cost that may already include them. Check the amount.
- Custom processing recipes have no inputs or outputs, and there is no recipe editor.
- A few Reports figures read information that is not saved, and show zero: Processing Efficiency, Batch Profitability, and the per-enterprise revenue strip on the Dashboard and in Reports.
- Trade contract **deposit paid** and **fully paid** only tick a box. They do not create income in Finance.

- On Credit Profile, a Finance Manager sees **Revoke** for a lender link but may get a permission message, because revoking needs delete access.
- Requisitions **Export CSV** may not produce a usable file.

Tools and intelligence

- Smart Engine rules for poultry-house temperature and battery charge cannot fire, because the Poultry Houses and Energy pages save the information under different names.
- Notifications for water, poultry, energy and soil alerts may show generic titles.
- Smart Devices and Device Gateway share one saved device list with different record shapes. Use only one of them.
- In Animal Health always fill in **End Date** when you enter a withdrawal period. A treatment with a withdrawal period and no end date can break the Overview page.

Government, extension and partners

- There is no bulk-enrol control. Enrol organisations one at a time.
- The support ledger cannot be edited or deleted. A wrong amount must be raised with your administrator.
- Turning data sharing off does not remove existing extension assignments or programme enrolments.
- The National Map and Ecosystem pages ignore the province and district filter bar.
- Whoever creates a government or partner organisation becomes its administrator, whichever role card was chosen. The extra roles (supervisor, partner administrator, M&E officer, observer) are added by an administrator.
- The default M&E officer role may not see the **+ Reading** button on the results framework, because that button needs permission to edit Programmes.

Behaviours worth knowing

- Items from other modules are matched to your stock **by name**, ignoring capital letters, spaces and punctuation. A sale of "Live broilers" does nothing to stock if no item has that name.
- Income shown in Finance, the Dashboard, Financial AI and Reports is the Finance ledger only. A fulfilled sales order is already in it. Draft and confirmed orders are not income yet.
- The Sales page's own **Revenue** tile adds all orders that are not cancelled, including drafts, so it can be higher than Finance.
- Government overview percentages count all active business accounts as the total, but only farms and cooperatives as "reporting", so the percentage can look low.

Appendix G — Glossary

Words used in the platform and in this manual, in alphabetical order.

Account — Your sign-in. It belongs to a company (a farm, a vendor, a government office or a programme partner) or, for buyers, to one person.

Administrator (organisation administrator) — The owner or director of a company. Can manage the team, permissions, branches and settings, and always has full access.

Advisory — A message from government or an extension service to farmers in an area, for example a pest warning.

Agro-dealer — A business that sells farm inputs such as seed, fertiliser and chemicals.

Backup and Restore — A page that saves the information kept in your browser to a file and puts it back on another device. It does not contain data already kept in your company account.

Baseline — The starting value of an indicator before a programme begins, used to measure progress.

Batch — One group of animals, plants or product handled together, for example one flock of broilers or one lot of milled maize.

Benchmark — A target or normal value suggested by a template, for example feed conversion of 1.7 for broilers.

Branch — A site or office of a company, such as a farm location or shop. Staff can be limited to a branch.

Business type — The kind of business you register as: Farmer / Farm, Cooperative, Agro Dealer, Vet / Animal Health, Equipment Hire, AgriFood Seller, AgriSupply Provider, AgriServices Provider, Agro Processor or Transport / Haulage.

Care guide — A list of feeding, vaccination, medicine, spray, fertiliser, weighing, checking and task reminders, each due on a day of the cycle (see Part 2).

Care Plan — The tab on a cycle that shows what is due today, what is overdue and what is coming.

Caseload — The farms an extension officer looks after.

Cohort — A group of participants enrolled in a programme at one time.

Company account — The shared, saved copy of your company's information on the platform, seen by everyone in the company on every device.

Consent (data-sharing consent) — Your company's choice to let government, partners and lenders see de-identified or shared information about your farm.

Cooperative — A group of smallholders who run crops, livestock or marketing together. Uses the farm workspace.

Credit profile — A summary of your farm's records, finances, trading and support network that you can share with a lender.

Cycle — One run of production from a template: a batch of broilers, a maize season, a pond of fish. A cycle has stages, daily records, events and a care plan.

Cycle type (variant) — The kind of cycle you choose when you start one, for example Broiler Grow-Out or Layer from Day-Old. It decides which daily fields show.

Daily Log — The tab where you record each day's measurements for a cycle.

Day 0 — The day a cycle starts. Care-guide items are counted in days from day 0.

Disaggregation — Splitting an indicator by a group, for example by sex or age, so a programme can see who benefits.

Enrolment — Adding a farm or organisation to a programme.

Enterprise — One line of business on your farm, such as broilers, maize or tilapia ponds. It is built from a template.

Event — Something that happens during a cycle that is not a daily measurement: a purchase, treatment, vaccination, mortality, harvest, sale and so on.

Extension officer — An agricultural adviser who visits farms and advises farmers.

FAMACHA — A method of judging anaemia in goats and sheep from eyelid colour, used to decide whether to deworm.

FCR (feed conversion ratio) — Feed eaten divided by weight gained. Lower is better.

Fulfil — To mark a sales order as delivered. In AGRINUXES this posts the income to Finance and takes the goods out of Inventory.

Hen-day production — The percentage of hens that laid on a day.

Indicator — A measure of a programme's results, for example the number of farmers trained.

Inventory — Your stock of feed, medicine, seed, produce and other items.

Item (stock item) — One thing you keep in stock, with a unit, minimum level and cost.

KPI — A key figure that shows how well something is going.

Ledger — The record of every income and expense in Finance.

Logframe (results framework) — A programme's plan of results and indicators, with targets and how they will be checked.

Lot — A processing batch given a code so the product can be traced back to the farms that supplied it.

M&E (monitoring and evaluation) — Tracking a programme's results and judging whether it worked.

Marketplace — The part of the platform where buyers find vendors and where vendors show what they offer.

Movement — A change to stock: stock in, stock out, adjustment or transfer.

Normal range — The minimum and maximum a daily field should normally fall within. Values outside it are flagged.

Onboarding (set-up wizard) — The five steps a new company goes through to set up its workspace.

Output — What a cycle produces and where it goes: sale, inventory, processing, own use and so on.

Partner (programme partner) — An NGO, donor or programme organisation that runs support programmes for farms.

Permission — What a person may do in a module: view, create, edit or delete.

Phase (care guide) — A care-guide item that applies for a whole span of days, such as "Starter feed, day 0 to 13".

Phase (production program) — One step of a multi-step production program.

Programme — A funded support project that enrols farms and delivers inputs, cash or training.

Provider — A vendor's public profile on the marketplace.

Record field — One box on the daily log, such as Feed Consumed or Water Temperature.

Requisition — An internal request to buy or be given something.

Role — A named set of permissions, such as Director, Production Manager or Farmhand.

Saved on this device only — Information kept in the browser of one device, not shared with colleagues and not backed up unless you use Backup and Restore.

Stage — A step within a cycle, for example Brooding, Grower, Finishing.

Starter guide — The built-in care guide that comes with every template, offered as typical practice only.

Support ledger — A programme's record of what it has delivered to each participant.

Template — A ready-made production plan with stages, daily record fields, targets and a starter care guide. You can copy and change one and save it as your own.

Thin file — A farm with too little history to be scored properly for credit.

Traceability — Being able to follow a product back from the shelf to the lot and the farms that supplied it.

Transfer (stock) — Moving stock out of an item to another place you name.

Transfer output (production) — Moving part of a cycle's output to another cycle or selling it, recorded as a decision.

Vendor — Any business account that is not a farm or cooperative: agro-dealers, vets, equipment hire, transport, AgriFood, AgriSupply, AgriServices and processors.

Version (template) — A number that goes up each time you save changes to one of your saved templates.

Withdrawal period — The days after a medicine or spray during which meat, milk, eggs or produce must not be sold or eaten.

Appendix H — Troubleshooting and Frequently Asked Questions

Short answers to the questions people ask most. Each points to the part of the manual with the full steps.

Signing in and your account

I forgot my password. The **Forgot password?** link does not do anything yet. Ask your company administrator or AGRINUXES support (Part 1; Appendix F).

I cannot sign in with my phone number. The sign-in box asks for an email address, and a browser may refuse a phone number. Use the email address on your account.

The page says I am signed out after a while. Sessions last about 8 hours. Sign in again.

There is no Sign Out button in my farm workspace. That is how the farm workspace works today. On a shared computer, use a private browsing window and close it afterwards. Vendor workspaces and buyer dashboards do have **Sign Out**.

A new team member sees the set-up wizard. Add team members only after the owner has finished the wizard. A member who signs in while the workspace is empty is shown the wizard too (Part 1).

A menu item is missing. Each person sees only what their role allows. Ask an administrator to open **Team & Permissions** and change your role or permissions (Part 1; Appendix E).

A page says "You do not have access". Your role does not include that area. An administrator can change it.

A page says it "could not be loaded". The platform could not be reached. Check your internet connection and press **Try again**. Automatic entries you made meanwhile are kept and sent when the connection returns.

Where is my data? Why can my colleague not see it?

My colleague cannot see the records I entered. Some pages keep information only in the browser on the device you used (for example Animal Health, Staff and Labour, Procurement, Requisitions, Crop Rotation and the device pages). The farm workspace, Finance, Sales, Inventory, Trade and Export and Credit Profile are shared. Part 1 and Part 5 list every page (Part 1, "Where your data is kept").

I changed phone or browser and my records are gone. Records kept on one device do not move by themselves. Use **Backup & Restore** to save them to a file and restore them on the other device. Records in your company account are there on any device.

Is my data backed up? Company information is kept on the platform's server. Information kept only in your browser is not backed up unless you make a backup file.

Production, templates and the daily log

I picked the wrong template when I set up. Add the right enterprise from **Settings**, start your cycles there, and stop using the old one (Part 2).

A box I expect is missing from the Daily Log. The boxes follow your template and your cycle type. Choose the correct cycle type when you start a cycle, or add the box yourself with **Customise fields** (Part 2).

Can I change a template just for one cycle? Fields and the care guide follow the enterprise's template. Switch the enterprise to a different saved template, or save a new version. A cycle keeps the stages it was created with (Part 2).

The care guide says to give a vaccine on a day that does not suit me. Starter guides are typical practice. Change the day in **Set my standards** and save it as your template. Confirm every medicine and dose with your vet (Part 2).

My spreadsheet will not import. Open the preview and read the Status column. Common causes: the date cannot be read, a number box contains text, a required box is empty, or the stage name does not match. Download the **Template** button's file and copy its headings (Part 2).

Do I log a purchase in Production and again in Finance? No. A purchase, treatment, vaccination or sale event posts to Finance for you. Enter it once (Part 4, "How the modules talk to each other").

I corrected an event but Finance still shows the old amount. Editing or deleting an event does not change the Finance entry it made. Correct the entry in Finance as well.

I closed a cycle too early. A closed cycle cannot be reopened. Start a new cycle (Part 3).

Stock, sales and money

My stock did not go down after I fulfilled an order. Stock is matched by name. The order line "Live broilers" only changes an item called "Live broilers" (capital letters, spaces and punctuation do not matter). Rename the item or the line so they match (Part 4).

A stock-out was refused. You tried to take out more than is in stock (the message says how much there is). Record the stock-in first, or correct the quantity.

Finance shows less income than the Sales page. Finance counts income from fulfilled orders. The Sales **Revenue** tile also counts drafts and confirmed orders (Part 4).

A payment was refused. A payment cannot be more than the balance due, and a cancelled order takes no payments.

How is "overdue" decided? An order that is not fully paid and whose due date has passed shows **Overdue** (Part 4).

Vendors and buyers

A buyer contacted me but nothing appears in Orders. Orders are recorded by your staff after contact. Record the order with **New Order** (Part 7).

I do not appear when farmers search. Complete your **Marketplace** tab (name, description, district, services, certificates) and keep your services up to date. "Verified" appears only after a platform administrator checks your certificates (Part 6).

I pressed Order on the buyer dashboard and nothing opened. The **Order** and **Enquire** buttons are not connected yet. Phone the seller (Appendix F).

Government, extension and partners

The government dashboard shows few farms. Only farms that have switched on data sharing are counted in the detailed figures. Ask farms to tick the consent box in **Settings** (Part 1; Part 8).

An officer cannot see a farm. The farm must have given consent and be in the officer's area or caseload.

I cannot add a reading to the results framework. The **+ Reading** button needs permission to edit Programmes. Ask your administrator (Part 8).

Good habits

- Enter each fact once, in the place that matches the job. Let the platform post it everywhere else.
- Record daily, even if only a few boxes.
- Review the starter care guide for each enterprise before you rely on it, and save your own version.
- Make a backup file from **Backup & Restore** regularly if you use pages that are saved on one device.
- Keep your own sign-in private. Give each colleague their own account under **Team & Permissions**.

Appendix I — First-Week Checklists

Tick these off in your first week. Each line points to where the steps are explained.

Farm or cooperative owner

Day 1

- Register a **Farm / Business** account and sign in (Part 1).
- Finish the set-up wizard: choose **Farmer / Farm** or **Cooperative**, name the business, choose categories, add one enterprise from a template and press **Finish setup** (Part 1).
- Open **Team & Permissions** and add your key people with the right roles. Do this after the wizard (Part 1).
- Open **Settings** and check your business details and the approval workflow (Part 1).

Day 2

- Open **Production** and start your first cycle from the enterprise: choose the cycle type, enter the numbers, name it (Part 2; Part 3).
- Open the **Care Plan** tab. Read the starter guide with your vet or extension officer. Use **Set my standards** to change it and save it as your own template (Part 2).
- Open the **Daily Log** and use **Customise fields** to add the boxes you really want, such as feed brand (Part 2).

Days 3 to 7

- Record the **Daily Log** every day and tick off the **Care Plan** items (Part 2).
- Log events as they happen: purchases, treatments, vaccinations, mortality, harvest, sales (Part 3).
- Add your stock items in **Inventory** with minimum levels (Part 4).
- Add customers in **Sales** and record your first order (Part 4).
- Look at **Finance** and the **Dashboard**. Check that the automatic entries look right (Part 4).
- Make a backup in **Backup & Restore** if you use pages saved on one device (Part 1).

Later

- Turn on data sharing if you want an extension officer, a programme or a lender to see your farm (Part 1; Part 4).
- Check your **Credit Profile** and see what would improve your score (Part 4).

Agro-dealer, AgriSupply provider or AgriFood seller

- Register a Farm / Business account with your business type and finish the wizard (Part 1).
- Open **Settings** and set your district.
- Fill in the **Marketplace** tab so buyers can find you: description, services and certificates (Part 6).
- Build your **Product Catalog** (or **Supply Catalog** or **Produce Listings**): name, unit, price, stock (Part 7).
- Record your opening stock in **Stock Management** or **Pricing & Stock** (Part 7).
- Record each order in **Orders**, move it through its statuses and raise an invoice (Part 6; Part 7).

- Add your staff under **Users & Permissions** (Part 6).

Agro processor

- Register, finish the wizard and fill in the **Marketplace** tab (Part 1; Part 6).
- Record raw material intake in **Farm Sourcing** (Part 7).
- Record each batch in **Processing Logs** and give every lot a code (Part 7).
- Keep finished goods in **Inventory** and look up lots in **Traceability** (Part 7).
- Record **Orders** and invoice them (Part 6; Part 7).

Vet, equipment hire, transport or AgriServices business

- Register, finish the wizard, set your district and fill in the **Marketplace** tab (Part 1; Part 6).
- Add your services and prices in **Services Catalog** (or routes and rates for transport) (Part 6).
- Vet: add patients, take appointments, write prescriptions (Part 6).
- Equipment hire and transport: add your machines or vehicles in the fleet tab, record bookings or jobs and log maintenance (Part 6).
- AgriServices: schedule jobs in **Job Schedule** (Part 6).
- Raise an invoice for each completed job or visit and watch **Revenue** (Part 6).

Individual buyer

- Register as an **Individual** (Part 1).
- Browse the marketplace by category, search and filter (Part 8).
- Save favourites and call the seller to order (Part 8).

Extension officer

- Sign in (an administrator creates supervisor accounts) (Part 1).
- Look at **Farms available** and add farms to your caseload (Part 8).
- Record each visit with notes and follow-up dates (Part 8).
- Send advisories to your farmers (Part 8).

Government staff

- Register on the **Gov / Partner** route or be added by an administrator (Part 1).
- Choose your area and open the dashboards (Part 8).
- Explore the **National Map** and **Ecosystem** pages (Part 8).
- Send advisories (administrators) (Part 8).

Programme partner

- Register on the **Gov / Partner** route and add your team with the right roles (Part 1; Part 8).
- Create a programme: sector, dates, budget, targeting districts, eligibility (Part 8).
- Enrol eligible farms one at a time and record support in the support ledger (Part 8).
- Build the results framework with indicators, baselines and targets, and record readings (Part 8).
- Generate the donor report (Part 8).
